THE GOVERNMENT PUBLICATIONS SALE OFFICE, 5 NASSAU STREET, DUBLIN.

No. 1. VOL. LXXII.]

WEEK ENDED SATURDAY, 5th JANUARY, 1935.

[PRICE 1½d. NET]

*Oifig an Ard-Chláradóra,**Baile Átha Cliath.*

## PRINCIPAL TOWNS

Particulars of the Births and Deaths\* recorded for the **Twelve Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Twelve Principal Towns, 13·5 and 13·3; City of Dublin, 14·5 and 13·3; Borough of Dun Laoghaire, 16·0 and 16·4; Cork, 10·0 and 13·1; Limerick, 21·1 and 13·9; and Waterford, 17·6 and 15·7.

The deaths from the principal epidemic diseases† recorded for the twelve principal towns last week were represented by an annual rate of 0·8 per 1,000.

**City of Dublin.**—The number of births registered during the week was 327—173 boys and 154 girls. Exclusive of those, numbering 35, occurring in institutions of infants whose mothers were admitted from other localities, the number was 292, representing a rate of 35·5 per 1,000.

The number of deaths registered was 135—66 males and 69 females. Of the total, 16 related to persons belonging to other localities, so that the actual number of deaths for the city was 119, representing a rate of 14·5 per 1,000.

There were 9 deaths from the principal epidemic diseases, comprising 3 from measles, one from whooping-cough, 3 from diphtheria, and 2 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from measles were one, 0, and 0; deaths from diphtheria were 2, 0 and 2; and deaths from diarrhoea and enteritis of children under 2 years were 3, 0, and one. There were no deaths from whooping-cough in the three previous weeks.

Tuberculous disease caused 11 deaths (10 of which were from pulmonary tuberculosis, and one from military tuberculosis) as against 11, 11 and 14 from all forms of tuberculosis in the three preceding weeks.

Seven deaths were caused by cancer, and 17 by diseases of the heart.

There were 14 deaths from pneumonia, comprising 8 from broncho-pneumonia, one from lobar pneumonia, and 5 from pneumonia (not otherwise defined). Bronchitis caused 13 deaths.

There were 4 deaths from violence registered during the week.

Among the deaths of infants under one year of age, one was due to cerebro-spinal fever, 4 to bronchitis, 5 to pneumonia, 2 to diarrhoea and enteritis, 6 to premature birth, 2 to congenital malformation, and one to congenital debility.

Thirty-four of the deaths recorded for the City during the week were those of children under 5 years of age, 24 being infants under one year, 11 of whom were under one month old, and 38 were those of persons aged 65 years and upwards, of whom 29 were aged 70 years or over.

Of the 119 deaths recorded, 57 occurred in hospitals or other public institutions.

**CASES OF INFECTIOUS DISEASES.**—Table III. shows the numbers notified in the City of Dublin, and in the Boroughs; and Table IV. the number of cases of certain diseases treated in Dublin Hospitals.

**Northern Ireland and Great Britain.**—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 16·7 per 1,000 of the population, and for Londonderry 16·2.

In 121 County Boroughs and Great Towns of England and Wales (including London, in which the rate was 11·7) the mortality was 11·8 per 1,000 of the estimated resident population.

The average death-rate for 16 principal towns of Scotland was 15·4 per 1,000 persons living, the rate for Glasgow being 16·7 and for Edinburgh 14·2.

\* See note at foot of fourth page.

† Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday 5th January, 1935, for the Twelve Principal Towns of Saorstát Éireann and BELFAST 19  
and LONDONDERRY County Boroughs, with the METEOROLOGY for the week; also similar particulars for LONDON, EDINBURGH, and GLASGOW.

(a) See note at foot of fourth page. (b) According to the Census of 1926, but in the cases of the City of Dublin, and the Borough of Dún Laoghaire, the populations given are those estimated to the middle of 1935, while the estimate shown for London relates to the resident population in 1933. The populations for Glasgow and Edinburgh are those estimated provisionally to the middle of 1934. (c) Observations at Ordnance Survey Office, Phoenix Park. (d) Observations by Sir John Moore, taken at Fitzwilliam Square (Sunshine returned by Trinity College). (e) Botanic Gardens, Glasnevin. (f) Markree.

TABLE II.—Deaths registered during the week ended **Saturday, 5th January, 1935**, for the City of Dublin and the **County Borough of Cork**\* by Registrars' Districts, with the mortality per 1,000 of the population from all causes and from the **PRINCIPAL EPIDEMIC DISEASES**.

NOTE.—For the purpose of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions in the case of births, by the exclusion of those taking place in each urban area belonging to other localities but the figures show for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2, Cork Rural No. 1 and No. 2, and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths of residents of the Boroughs occurring in the Registrars' Districts above named are included, as in the case of births. In addition, the deaths in Institutions situated in Registrars' Districts embracing the twelve towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions for Saorstát Éireann will be made in the Detailed Annual Report.

### CÚNTAS SEACHTMHAINEAMHAIL na mBREITH agus na mBAS WEEKLY RETURN OF BIRTHS AND DEATHS FOR THE TWELVE PRINCIPAL TOWNS OF SAORSTÁT ÉIREANN

Baile Átha Cliath.*

## PRINCIPAL TOWNS

Particulars of the Births and Deaths\* recorded for the **Twelve Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Twelve Principal Towns, 16·1 and 13·8; City of Dublin, 16·2 and 14·1; Borough of Dun Laoghaire, 16·0 and 17·1; Cork, 11·3 and 10·3; Limerick, 18·5 and 15·2; and Waterford, 21·5 and 17·1.

The deaths from the principal epidemic diseases† recorded for the twelve principal towns last week were represented by an annual rate of 1·4 per 1,000. Among the 17 deaths from all causes for Cork was one from diphtheria, and one of the 14 deaths for Limerick was also from this disease. Two of the 11 deaths for Waterford were from measles and 2 from diarrhoea and enteritis of children under 2 years of age. One of the 5 deaths for Drogheda and one of the 2 deaths for Kilkenny were from diphtheria.

**City of Dublin.**—The number of births registered during the week was 260—132 boys and 128 girls. Exclusive of those, numbering 31, occurring in institutions of infants whose mothers were admitted from other localities, the number was 229, representing a rate of 27·8 per 1,000.

The number of deaths registered was 143—81 males and 62 females. Of the total, 14 related to persons belonging to other localities and the deaths of 4 persons belonging to the city were registered in other districts, so that the actual number of deaths for the city was 133, representing a rate of 16·2 per 1,000.

There were 9 deaths from the principal epidemic diseases, comprising 3 from measles, one from whooping-cough, 2 from diphtheria, and 3 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from measles were 0, 0 and 3; deaths from whooping-cough were 0, 0 and one; deaths from diphtheria were 0, 2 and 3; and deaths from diarrhoea and enteritis of children under 2 years were 0, one, and 2.

There were 2 deaths from cerebro-spinal fever, and 2 from influenza.

Tuberculous disease caused 14 deaths (12 of which were from pulmonary tuberculosis one from tuberculous meningitis, and one from other forms of tuberculous disease), as against 11, 14 and 11 from all forms of tuberculosis in the three preceding weeks.

Eight deaths were caused by cancer, and 23 by diseases of the heart.

There were 18 deaths from pneumonia, comprising 13 from broncho-pneumonia, 4 from lobar pneumonia, and one from pneumonia (not otherwise defined). Bronchitis caused 13 deaths.

Among the deaths of infants under one year of age, one was due to convulsions, one to bronchitis, 7 to pneumonia, 3 to diarrhoea and enteritis, one to premature birth, and 3 to congenital debility.

Thirty of the deaths recorded for the City during the week were those of children under 5 years of age, 19 being infants under one year, 6 of whom were under one month old, and 49 were those of persons aged 65 years and upwards, of whom 41 were aged 70 years or over. Of the 133 deaths recorded, 58 occurred in hospitals or other public institutions.

**CASES OF INFECTIOUS DISEASES.**—Table III. shows the numbers notified in the City of Dublin, and in the Boroughs; and Table IV. the number of cases of certain diseases treated in Dublin Hospitals.

**Northern Ireland and Great Britain.**—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 16·7 per 1,000 of the population, and for Londonderry 10·4.

In 121 County Boroughs and Great Towns of England and Wales (including London, in which the rate was 12·2) the mortality was 12·4 per 1,000 of the estimated resident population.

The average death-rate for 16 principal towns of Scotland was 14·9 per 1,000 persons living, the rate for Glasgow being 16·9 and for Edinburgh 13·7.

\* See note at foot of fourth page.

† Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday 12th January, 1935, for the Twelve Principal Towns of SAORSTÁT ÉIREANN and BELFAST and LONDONDERRY County Boroughs, with the METEOROLOGY for the week; also similar particulars for LONDON, EDINBURGH, and GLASGOW.

(a) See note at foot of page. (b) According to the Census of 1926, but in the cases of the City of Dublin, and the Borough of Dún Laoghaire, the populations given are those estimated to the middle of 1935, while the estimate shown for London relates to the resident population in 1933. The populations for Glasgow and Edinburgh are those estimated provisionally to the middle of 1935. (c) Observations at Ordnance Survey Office, Phoenix Park. (d) Observations by Sir John Moore, taken at Fitzwilliam Square (Sunshine returned by Trinity College). (e) Botanic Gardens, Glasnevin. (f) Marree. (g) Typhoid Fever.

TABLE II.—Deaths registered during the week ended **Saturday, 12th January, 1935**, for the City of Dublin and the **County Borough of Cork\*** by Registrars' Districts, with the mortality per 1,000 of the population from all causes and from the **PRINCIPAL EPIDEMIC DISEASES**.

NOTE.—For the purpose of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births, by the exclusion of those taking place in each urban area belonging to other localities but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2, Cork Rural No. 1 and No. 2, and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths of residents of the Boroughs occurring in the Registrars' Districts above named are included, as in the case of births. In addition, the deaths in Institutions situated in Registrars' Districts embracing the twelve towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions for Saorstát Éireann will be made in the Detailed Annual Report.

*Oifig an Ard-Chláradóra,**Baile Átha Cliath.***PRINCIPAL TOWNS**

Particulars of the Births and Deaths\* recorded for the **Twelve Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Twelve Principal Towns, 15·2 and 14·1; City of Dublin, 13·6 and 14·1; Borough of Dun Laoghaire, 14·5 and 15·6; Cork, 21·3 and 13·3; Limerick, 19·8 and 15·5; and Waterford 13·7 and 16·6.

The deaths from the principal epidemic diseases† recorded for the twelve principal towns last week were represented by an annual rate of 1·3 per 1,000. Among the 10 deaths from all causes for Dun Laoghaire were one from diphtheria and one from diarrhoea and enteritis of a child under 2 years of age. Two of the 32 deaths for Cork were from measles and one was from diarrhoea and enteritis of a child under 2 years of age. Among the 15 deaths for Limerick were one from diphtheria and one from diarrhoea and enteritis of a child under 2 years of age. One of the 7 deaths for Waterford was from measles, and one of the 6 deaths for Galway and one of the 6 deaths for Drogheda were from diphtheria.

**City of Dublin.**—The number of births registered during the week was 289—147 boys and 142 girls. Exclusive of those, numbering 35, occurring in institutions of infants whose mothers were admitted from other localities, the number was 254, representing a rate of 30·9 per 1,000.

The number of deaths registered was 128—67 males and 61 females. Of the total, 16 related to persons belonging to other localities, so that the actual number of deaths for the city was 112, representing a rate of 13·6 per 1,000.

There were 6 deaths from the principal epidemic diseases, comprising one from measles, 3 from whooping-cough, one from diphtheria, and one from diarrhoea and enteritis of a child under 2 years of age. In the three preceding weeks deaths from measles were 0, 3 and 3; deaths from whooping-cough were 0, one and one; deaths from diphtheria were 2, 3 and 2; and deaths from diarrhoea and enteritis of children under 2 years were one, 2 and 3.

Tuberculous disease caused 6 deaths (5 of which were from pulmonary tuberculosis and one from glandular tuberculosis), as against 14, 11 and 14, from all forms of tuberculosis in the three preceding weeks.

Ten deaths were caused by cancer, and 22 by diseases of the heart.

There were 9 deaths from pneumonia, comprising 7 from broncho-pneumonia, one from lobar pneumonia, and one from pneumonia (not otherwise defined). Bronchitis caused 17 deaths.

There were 3 accidental deaths, one of which was due to scalds and two to injuries caused by motor vehicles.

Among the deaths of infants under one year of age, 2 were due to whooping cough, one to convulsions, 2 to bronchitis, 3 to broncho-pneumonia, one to diarrhoea and enteritis, 5 to premature birth, and one to injury at birth.

Twenty-three of the deaths recorded for the City during the week were those of children under 5 years of age, 17 being infants under one year, 7 of whom were under one month old, and 37 were those of persons aged 65 years and upwards, of whom 29 were aged 70 years or over.

Of the 112 deaths recorded, 52 occurred in hospitals or other public institutions.

**CASES OF INFECTIOUS DISEASES.**—Table III. shows the numbers notified in the City of Dublin, and in the Boroughs; and Table IV. the number of cases of certain diseases treated in Dublin Hospitals:

**Northern Ireland and Great Britain.** The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 17·3 per 1,000 of the population, and for Londonderry 15·0.

In 121 County Boroughs and Great Towns of England and Wales (including London, in which the rate was 12·7) the mortality was 13·0 per 1,000 of the estimated resident population.

The average death-rate for 16 principal towns of Scotland was 16·2 per 1,000 persons living, the rate for Glasgow being 17·4 and for Edinburgh 13·8.

\* See note at foot of fourth page.

† Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday 19th January, 1935, for the Twelve Principal Towns of Saorstát Éireann and BELFAST and LONDONDERRY County Boroughs, with the METEOROLOGY for the week; also similar particulars for LONDON, EDINBURGH, and GLASGOW.

(a) See note at foot of fourth page. (b) According to the Census of 1926, but in the cases of the City of Dublin, and the Borough of Dún Laoghaire, the populations given are those estimated to the middle of 1935, while the estimate shown for London relates to the resident population in 1933. The populations for Glasgow and Edinburgh are those estimated provisionally to the middle of 1935. (c) Observations at Ordnance Survey Office, Phoenix Park. (d) Observations by Sir John Moore, taken at Fitzwilliam Square (Sunshine returned by Trinity College). (e) Botanic Gardens, Glasnevin. (f) Markee. (g) Typhoid fever.

TABLE II.—Deaths registered during the week ended **Saturday, 19th January, 1935**, for the **City of Dublin** and the **County Borough of Cork**\* by Registrars' Districts, with the mortality per 1,000 of the population from all causes and from the **PRINCIPAL EPIDEMIC DISEASES**.

NOTE.—For the purpose of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births, by the exclusion of those taking place in each urban area belonging to other localities but the figures shown for Dún Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2, Cork Rural No. 1 and No. 2, and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths of residents of the Boroughs occurring in the Registrars' Districts above named are included, as in the case of births. In addition, the deaths in Institutions situated in Registrars' Districts embracing the twelve towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions for Saorstát Éireann will be made in the Detailed Annual Report.

## PRINCIPAL TOWNS

Particulars of the Births and Deaths\* recorded for the **Twelve Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population :—

Twelve Principal Towns, 15·2 and 15·0; City of Dublin, 15·8 and 15·0; Borough of Dun Laoghaire, 14·5 and 15·3; Cork, 11·3 and 13·5; Limerick, 15·9 and 18·8; and Waterford, 25·4 and 19·6.

The deaths from the principal epidemic diseases† recorded for the twelve principal towns last week were represented by an annual rate of 1·1 per 1,000. Among the 13 deaths from all causes for Waterford were one from measles, one from diphtheria, and one from diarrhoea and enteritis of a child under 2 years of age. One of the 5 deaths for Drogheda was from diphtheria and one of the 2 deaths for Tralee was from typhoid fever.

**City of Dublin.**—The number of births registered during the week was 235—129 boys and 106 girls. Exclusive of those, numbering 24, occurring in institutions of infants whose mothers were admitted from other localities, the number was 211, representing a rate of 25·7 per 1,000.

The number of deaths registered was 141—73 males and 68 females. Of the total, 14 related to persons belonging to other localities, and the deaths of 3 persons belonging to the city were registered in other districts, so that the actual number of deaths for the city was 130, representing a rate of 15·8 per 1,000.

There were 8 deaths from the principal epidemic diseases, comprising 3 from measles, one from diphtheria, and 4 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from measles were 3, 3 and one; deaths from diphtheria were 3, 2 and one; and deaths from diarrhoea and enteritis of children under 2 years were 2, 3 and one.

There were 2 deaths from influenza.

Tuberculous disease caused 19 deaths (15 of which were from pulmonary tuberculosis and 4 from tuberculous meningitis), as against 11, 14 and 6 from all forms of tuberculosis in the three preceding weeks.

Five deaths were caused by cancer, and 26 by diseases of the heart.

There were 16 deaths from pneumonia, comprising 14 from broncho-pneumonia, and 2 from pneumonia (not otherwise defined). Bronchitis caused 8 deaths.

There were 2 accidental deaths, and one death by suicide.

Among the deaths of infants under one year of age, one was due to tuberculous meningitis, one to convulsions, 11 to pneumonia, 4 to diarrhoea and enteritis, 10 to premature birth, one to congenital malformation, and 2 to congenital debility.

Forty-three of the deaths recorded for the City during the week were those of children under 5 years of age, 31 being infants under one year, 11 of whom were under one month old, and 28 were those of persons aged 65 years and upwards, of whom 23 were aged 70 years or over.

Of the 130 deaths recorded, 72 occurred in hospitals or other public institutions.

**CASES OF INFECTIOUS DISEASES.**—Table III. shows the numbers notified in the City of Dublin, and in the Boroughs; and Table IV. the number of cases of certain diseases treated in Dublin Hospitals.

**Northern Ireland and Great Britain.**—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 23·0 per 1,000 of the population, and for Londonderry 26·6.

In 121 County Boroughs and Great Towns of England and Wales (including London, in which the rate was 12·5) the mortality was 12·7 per 1,000 of the estimated resident population.

The average death-rate for 16 principal towns of Scotland was 15·8 per 1,000 persons living, the rate for Glasgow being 15·0 and for Edinburgh 18·5.

\* See note at foot of fourth page.

† Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday 26th January, 1935, for the Twelve Principal Towns of Saorstát Éireann and BELFAST and LONDONDERRY County Boroughs, with the METEOROLOGY for the week: also similar particulars for LONDON, EDINBURGH, and GLASGOW.

(a) See note at foot of fourth page. (b) According to the Census of 1926, but in the cases of the City of Dublin, and the Borough of Dún Laoghaire, the populations given are those estimated to the middle of 1935, while the estimate shown for London relates to the resident population in 1933. The populations for Glasgow and Edinburgh are those estimated provisionally to the middle of 1935. (c) Observations at Ordnance Survey Office, Phoenix Park. (d) Observations by Sir John Moore, taken at Fitzwilliam Square (Sunshine returned by Trinity College). (e) Botanic Gardens, Glasnevin. (f) Markree. (g) Typhoid fever.

TABLE II.—Deaths registered during the week ended **Saturday, 26th January, 1935**, for the City of Dublin and the County Borough of Cork\* by Registrars' Districts, with the mortality per 1,000 of the population from all causes and from the PRINCIPAL EPIDEMIC DISEASES.

NOTE.—For the purpose of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births, by the exclusion of those taking place in each urban area belonging to other localities but the figures shown for Dún Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2, Cork Rural No. 1 and No. 2, and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths of residents of the Boroughs occurring in the Registrars' Districts above named are included, as in the case of births. In addition, the deaths in Institutions situated in Registrars' Districts embracing the twelve towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions for Saorstát Éireann will be made in the Detailed Annual Report.

PRINCIPAL TOWNS

Particulars of the Births and Deaths\* recorded for the **Twelve Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Twelve Principal Towns, 16·3 and 15·7; City of Dublin, 17·9 and 15·9; Borough of Dun Laoghaire, 8·7 and 13·4; Cork, 9·3 and 13·3; Limerick, 30·4 and 21·2; and Waterford, 13·7 and 18·6.

The deaths from the principal epidemic diseases† recorded for the twelve principal towns last week were represented by an annual rate of 0·8 per 1,000. Among the 14 deaths from all causes for Cork were 3 from diarrhoea and enteritis of children under 2 years of age; 2 of the 23 deaths for Limerick were also from this disease. One of the 7 deaths for Waterford was from measles.

**City of Dublin.**—The number of births registered during the week was 240—107 boys and 133 girls. Exclusive of those, numbering 29, occurring in institutions of infants whose mothers were admitted from other localities, the number was 211, representing a rate of 25·7 per 1,000.

The number of deaths registered was 165—90 males and 75 females. Of the total, 19 related to persons belonging to other localities, and the death of one person belonging to the city was registered in an adjoining district, so that the actual number of deaths for the city was 147, representing a rate of 17·9 per 1,000.

There were 4 deaths from measles registered during the week. In the three preceding weeks deaths from this disease were 3, one and 3.

There were 3 deaths from influenza.

Tuberculous disease caused 15 deaths (11 of which were from pulmonary tuberculosis one from tuberculous meningitis, and 3 from other forms of tuberculous disease), as against 14, 6 and 19 from all forms of tuberculosis in the three preceding weeks.

Seven deaths were caused by cancer, and 28 by diseases of the heart.

There were 14 deaths from pneumonia, comprising 8 from broncho-pneumonia, one from lobar pneumonia, and 5 from pneumonia (not otherwise defined). Bronchitis caused 15 deaths.

There were 6 accidental deaths, one of which was due to burns one to scalds and 2 to injuries caused by motor vehicles.

Among the deaths of infants under one year of age, one was due to measles, 2 to bronchitis, 6 to pneumonia, 4 to premature birth, 3 to congenital malformation, and 4 to congenital debility.

Thirty of the deaths recorded for the City during the week were those of children under 5 years of age, 22 being infants under one year, 12 of whom were under one month old, and 50 were those of persons aged 65 years and upwards, of whom 42 were aged 70 years or over.

Of the 147 deaths recorded, 65 occurred in hospitals or other public institutions.

**CASES OF INFECTIONS DISEASES.**—Table III. shows the numbers notified in the City of Dublin, and in the Boroughs; and Table IV. the number of cases of certain diseases treated in Dublin Hospitals.

**Northern Ireland and Great Britain.**—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 22·5 per 1,000 of the population, and for Londonderry 15·0.

In 121 County Boroughs and Great Towns of England and Wales (including London, in which the rate was 13·0) the mortality was 13·4 per 1,000 of the estimated resident population.

The average death-rate for 16 principal towns of Scotland was 16·3 per 1,000 persons living, the rate for Glasgow being 15·7 and for Edinburgh 18·1.

\* See note at foot of fourth page.

† Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE II.—Deaths registered during the week ended Saturday, 2nd February, 1935, for the City of Dublin and the County Borough of Cork\*, by Registrars' Districts, with the mortality per 1,000 of the population from all causes and from the PRINCIPAL EPIDEMIC DISEASES.

NOTE.—For the purpose of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births, by the exclusion of those taking place in each urban area belonging to other localities but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2, Cork Rural No. 1 and No. 2, and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths of residents of the Boroughs occurring in the Registrars' Districts above named are included, as in the case of births. In addition, the deaths in Institutions situated in Registrars' Districts embracing the twelve towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions for Saorstát Éireann will be made in the Detailed Annual Report

**PRINCIPAL TOWNS**

Particulars of the Births and Deaths\* recorded for the **Twelve Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population :—

Twelve Principal Towns, 17·9 and 16·2; City of Dublin, 17·3 and 16·2; Borough of Dun Laoghaire, 23·2 and 15·2; Cork, 19·9 and 15·5; Limerick, 10·6 and 19·2; and Waterford, 13·7 and 16·6.

The deaths from the principal epidemic diseases† recorded for the twelve principal towns last week were represented by an annual rate of 1·2 per 1,000. The 30 deaths from all causes for Cork and the 7 for Waterford include in each case one from measles and one from diarrhoea and enteritis of a child under 2 years of age.

**City of Dublin.**—The number of births registered during the week was 303—164 boys and 139 girls. Exclusive of those, numbering 47, occurring in institutions of infants whose mothers were admitted from other localities, the number was 256, representing a rate of 31·1 per 1,000.

The number of deaths registered was 155—82 males and 73 females. Of the total, 16 related to persons belonging to other localities, and the deaths of 3 persons belonging to the city were registered in adjoining districts, so that the actual number of deaths for the city was 142, representing a rate of 17·3 per 1,000.

There were 11 deaths from the principal epidemic diseases, comprising 6 from measles, one from diphtheria, and 4 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from measles were one, 3 and 4, deaths from diphtheria were one, one and 0, and deaths from diarrhoea and enteritis of children under 2 years of age were one, 4 and 0.

Tuberculous disease caused 16 deaths (13 of which were from pulmonary tuberculosis 2 from tuberculous meningitis, and one from tuberculous peritonitis), as against 6, 19 and 15 from all forms of tuberculosis in the three preceding weeks.

Ten deaths were caused by cancer, and 18 by diseases of the heart.

There were 25 deaths from pneumonia, comprising 14 from broncho-pneumonia, 4 from lobar pneumonia, and 7 from pneumonia (not otherwise defined). Bronchitis caused 13 deaths.

There was one accidental death due to injuries caused by a motor vehicle.

Among the deaths of infants under one year of age, one was due to measles, 4 to convulsions, 2 to bronchitis, 10 to pneumonia, 4 to diarrhoea and enteritis, 4 to premature birth, one to congenital malformation, and 5 to congenital debility.

Forty-five of the deaths recorded for the City during the week were those of children under 5 years of age, 33 being infants under one year, 15 of whom were under one month old, and 39 were those of persons aged 65 years and upwards, of whom 29 were aged 70 years or over.

Of the 142 deaths recorded, 65 occurred in hospitals or other public institutions.

**CASES OF INFECTIOUS DISEASES.**—Table III. shows the numbers notified in the City of Dublin, and in the Boroughs; and Table IV. the number of cases of certain diseases treated in Dublin Hospitals.

**Northern Ireland and Great Britain.**—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 23·2 per 1,000 of the population, and for Londonderry 17·3.

In 121 County Boroughs and Great Towns of England and Wales (including London, in which the rate was 13·1) the mortality was 13·2 per 1,000 of the estimated resident population.

The average death-rate for 16 principal towns of Scotland was 16·6 per 1,000 persons living, the rate for Glasgow being 17·3 and for Edinburgh 16·6.

\* See note at foot of fourth page.

† Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday 9th February 1935, for the Twelve Principal Towns of Saorstát Éireann and BELFAST and LONDONDERRY County Boroughs, with the METEOROLOGY for the week; also similar particulars for LONDON, EDINBURGH, and GLASGOW.

| PRINCIPAL TOWNS | POPULATION (b) | Annual Rate per 1,000 persons represented by |                                  | BIRTHS       |     | DEATHS       |     |                     |     | (a) See note at foot of fourth page. (b) According to the Census of 1926, but in the cases of the City of Dublin, and the Borough of Dún Laoghaire, the populations given are those estimated to the middle of 1935, while the estimate shown for London relates to the resident population in 1933. The populations for Glasgow and Edinburgh are those estimated provisionally to the middle of 1935. (c) Observations at Ordnance Survey Office, Phoenix Park. (d) Observations by Sir John Moore, taken at Fitzwilliam Square (Sunshine returned by Trinity College). (e) Botanic Gardens, Glasnevin. (f) Markree.

TABLE II.—Deaths registered during the week ended Saturday, 9th February, 1935, for the City of Dublin and the County Borough of Cork\* by Registrars' Districts, with the mortality per 1,000 of the population from all causes and from the PRINCIPAL EPIDEMIC DISEASES.

NOTE.—For the purpose of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births, by the exclusion of those taking place in each urban area belonging to other localities but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2, Cork Rural No. 1 and No. 2, and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths of residents of the Boroughs occurring in the Registrars' Districts above named are included, as in the case of births. In addition, the deaths in Institutions situated in Registrars' Districts embracing the twelve towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions for Saorstát Éireann will be made in the Detailed Annual Report.

## PRINCIPAL TOWNS

Particulars of the Births and Deaths\* recorded for the **Twelve Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population :—

Twelve Principal Towns, 19·2 and 17·2; City of Dublin, 19·3 and 17·6; Borough of Dun Laoghaire, 10·2 and 14·2; Cork, 15·9 and 14·1; Limerick, 27·8 and 21·2; and Waterford, 25·4 and 19·6.

The deaths from the principal epidemic diseases† recorded for the twelve principal towns last week were represented by an annual rate of 1·2 per 1,000. The 24 deaths from all causes for Cork include one from measles. Among the 21 deaths from all causes for Limerick were one from diphtheria and one from diarrhoea and enteritis of a child under 2 years of age. Of the 13 deaths for Waterford one was from measles and one from diarrhoea and enteritis of a child under 2 years of age.

**City of Dublin.**—The number of births registered during the week was 254—145 boys and 109 girls. Exclusive of those, numbering 20, occurring in institutions of infants whose mothers were admitted from other localities, the number was 234, representing a rate of 28·5 per 1,000.

The number of deaths registered was 173—86 males and 87 females. Of the total, 16 related to persons belonging to other localities, and the deaths of 2 persons belonging to the city were registered in adjoining districts, so that the actual number of deaths for the city was 159, representing a rate of 19·3 per 1,000.

There were 10 deaths from the principal epidemic diseases, comprising 9 from measles, and one from diarrhoea and enteritis of a child under 2 years of age. In the three preceding weeks deaths from measles were 3, 4 and 6, and deaths from diarrhoea and enteritis of children under 2 years of age were 4, 0 and 4.

Tuberculous disease caused 16 deaths (10 of which were from pulmonary tuberculosis 2 from tuberculous meningitis, one from tuberculous peritonitis, and 3 from other forms of tuberculous disease), as against 19, 15 and 16 from all forms of tuberculosis in the three preceding weeks.

Ten deaths were caused by cancer, and 37 by diseases of the heart.

There were 22 deaths from pneumonia, comprising 12 from broncho-pneumonia, 3 from lobar pneumonia, and 7 from pneumonia (not otherwise defined). Bronchitis caused 9 deaths.

There were 7 accidental deaths, one of which was due to drowning.

Among the deaths of infants under one year of age, 2 were due to measles, one to cerebrospinal fever, 3 to bronchitis, 11 to pneumonia, one to diarrhoea and enteritis, 2 to premature birth, one to injury at birth, 2 to congenital malformation, and 2 to congenital debility.

Forty-one of the deaths recorded for the City during the week were those of children under 5 years of age, 25 being infants under one year, 9 of whom were under one month old, and 51 were those of persons aged 65 years and upwards, of whom 40 were aged 70 years or over.

Of the 159 deaths recorded, 72 occurred in hospitals, or other public institutions.

**CASES OF INFECTIOUS DISEASES.**—Table III. shows the numbers notified in the City of Dublin, and in the Boroughs; and Table IV. the number of cases of certain diseases treated in Dublin Hospitals.

**Northern Ireland and Great Britain.**—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 26·1 per 1,000 of the population, and for Londonderry 15·0.

In 121 County Boroughs and Great Towns of England and Wales (including London, in which the rate was 13·0) the mortality was 14·2 per 1,000 of the estimated resident population.

The average death-rate for 16 principal towns of Scotland was 17·2 per 1,000 persons living, the rate for Glasgow being 16·3 and for Edinburgh 17·4.

\* See note at foot of fourth page.

†Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday 16th February 1935, for the Twelve Principal Towns of Saorstát Éireann and BELFAST and LONDONDERRY County Boroughs, with the METEOROLOGY for the week; also similar particulars for LONDON, EDINBURGH, and GLASGOW.

| PRINCIPAL TOWNS | COLS. | POPULATION (b) | Annual Rate per 1,000 persons represented by |  | BIRTHS                           |  | DEATHS                           |  | (a) See note at foot of fourth page. (b) According to the Census of 1926, but in the cases of the City of Dublin, and the Borough of Dún Laoghaire, the populations given are those estimated to the middle of 1935, while the estimate shown for London relates to the resident population in 1933. The populations for Glasgow and Edinburgh are those estimated provisionally to the middle of 1935. (c) Observations at Ordnance Survey Office, Phoenix Park. (d) Observations by Sir John Moore, taken at Fitzwilliam Square (Sunshine returned by Trinity College). (e) Botanic Gardens, Glasnevin. (f) Market.

TABLE II.—Deaths registered during the week ended Saturday, 16th February, 1935, for the City of Dublin and the County Borough of Cork\* by Registrars' Districts, with the mortality per 1,000 of the population from all causes and from the PRINCIPAL EPIDEMIC DISEASES.

NOTE.—For the purpose of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births, by the exclusion of those taking place in each urban area belonging to other localities but the figures shown for Dún Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2, Cork Rural No. 1 and No. 2, and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths of residents of the Boroughs occurring in the Registrars' Districts above named are included, as in the case of births. In addition, the deaths in Institutions situated in Registrars' Districts embracing the twelve towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions for Saorstát Éireann will be made in the Detailed Annual Report.

### PRINCIPAL TOWNS

Particulars of the Births and Deaths\* recorded for the **Twelve Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population :—

Twelve Principal Towns, 19·5 and 18·2; City of Dublin, 20·3 and 18·7; Borough of Dun Laoghaire, 10·2 and 13·1; Cork, 15·3 and 15·1; Limerick, 19·8 and 22·2; and Waterford, 29·4 and 20·6.

The deaths from the principal epidemic diseases† recorded for the twelve principal towns last week were represented by an annual rate of 1·4 per 1,000. The 15 deaths from all causes for Waterford include one from scarlet fever and one from diarrhoea and enteritis of a child under 2 years of age. One of the 5 deaths for Drogheda was from diphtheria.

**City of Dublin.**—The number of births registered during the week was 277—151 boys, and 126 girls. Exclusive of those, numbering 35, occurring in institutions of infants whose mothers were admitted from other localities, the number was 242, representing a rate of 29·4 per 1,000.

The number of deaths registered was 191—94 males and 97 females. Of the total, 28 related to persons belonging to other localities, and the deaths of 4 persons belonging to the city were registered in adjoining districts, so that the actual number of deaths for the city was 167, representing a rate of 20·3 per 1,000.

There were 15 deaths from the principal epidemic diseases, comprising 7 from measles, 2 from whooping-cough and 6 from diphtheria. In the three preceding weeks deaths from measles were 4, 6 and 9, and deaths from diphtheria were 0, one and 0. There were no deaths from whooping-cough in the three preceding weeks.

Tuberculous disease caused 14 deaths (13 of which were from pulmonary tuberculosis and one from tuberculous peritonitis), as against 15, 16 and 16 from all forms of tuberculosis in the three preceding weeks.

Six deaths were caused by cancer, and 24 by diseases of the heart.

There were 29 deaths from pneumonia, comprising 18 from broncho-pneumonia, 4 from lobar pneumonia, and 7 from pneumonia (not otherwise defined). Bronchitis caused 20 deaths.

There were 2 accidental deaths.

Among the deaths of infants under one year of age, one was due to measles, 2 to whooping-cough, one to meningitis, one to tuberculous disease, 4 to convulsions, one to cerebro-spinal fever, 3 to bronchitis, 9 to pneumonia, 3 to premature birth, one to congenital malformation, and 2 to congenital debility.

Fifty-two of the deaths recorded for the City during the week were those of children under 5 years of age, 30 being infants under one year, 8 of whom were under one month old, and 53 were those of persons aged 65 years and upwards, of whom 40 were aged 70 years or over.

Of the 167 deaths recorded, 82 occurred in hospitals, or other public institutions.

**CASES OF INFECTIOUS DISEASES.**—Table III. shows the numbers notified in the City of Dublin, and in the Boroughs; and Table IV. the number of cases of certain diseases treated in Dublin Hospitals.

**Northern Ireland and Great Britain.**—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 19·1 per 1,000 of the population, and for Londonderry 9·2.

In 121 County Boroughs and Great Towns of England and Wales (including London, in which the rate was 12·2) the mortality was 12·9 per 1,000 of the estimated resident population.

The average death-rate for 16 principal towns of Scotland was 15·9 per 1,000 persons living, the rate for Glasgow being 15·9 and for Edinburgh 18·0.

\* See note at foot of fourth page.

† Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday 23rd February 1935, for the Twelve Principal Towns of Saorstát Éireann and BELFAST and LONDONDERRY County Boroughs, with the METEOROLOGY for the week; also similar particulars for LONDON, EDINBURGH, AND GLASGOW.

| PRINCIPAL TOWNS | POPULATION (b) | Annual Rate per 1,000 persons represented by |      | BIRTHS                           |     | DEATHS       |     | TOTAL DEATHS |     | Under 1 year of Age | (a) See note at foot of fourth page. (b) According to the Census of 1926, but in the cases of the City of Dublin, and the Borough of Dun Laoghaire, the populations given are those estimated to the middle of 1935, while the estimate shown for London relates to the resident population in 1933. The populations for Glasgow and Edinburgh are those estimated provisionally to the middle of 1935. (c) Observations at Ordnance Survey Office, Phoenix Park. (d) Observations by Sir John Moore, taken at Fitzwilliam Square (Sunshine returned by Trinity College). (e) Botanic Gardens, Glasnevin. (f) Market. (g) Typhoid Fever.

TABLE III.—Cases of Infectious Diseases notified in the undermentioned Urban areas during the week ended **Saturday, 23rd February, 1935**, and during each of the three preceding weeks. A dash (—) denotes that the disease in question is not notifiable in the district.

| AREAS               | Week ended | Typhoid Fever | Typhus, Pyrexia and Small-pox | Measles | Scarlet Fever | Whooping-cough | Diphtheria (including Membranous Croup) | Erysipelas | Puerperal Fever | Diarrhoeal Diseases | Dysentery & Malaria | Ophthalmia Neonatorum | Acute Primary Pneumonia and Acute Infectious Pneumonia | Cerebro-spinal Fever | Acute Poliomyelitis and Encephalitis Lethargica | Varicella | Tuberculosis | Total |

NOTE.—For the purpose of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births, by the exclusion of those taking place in each urban area belonging to other localities but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2, Cork Rural No. 1 and No. 2, and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths of residents of the Boroughs occurring in the Registrars' Districts above named are included, as in the case of births. In addition, the deaths in Institutions situated in Registrars' Districts embracing the twelve towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions for Saorstát Éireann will be made in the Detailed Annual Report.

*Baile Átha Cliath.*

### PRINCIPAL TOWNS

Particulars of the Births and Deaths\* recorded for the **Twelve Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population :—

Twelve Principal Towns, 15.9 and 18.1; City of Dublin, 18.2 and 18.8; Borough of Dun Laoghaire, 10.2 and 13.5; Cork, 19.3 and 17.6; Limerick, 5.3 and 15.9; and Waterford, 9.8 and 19.6.

The deaths from the principal epidemic diseases† recorded for the twelve principal towns last week were represented by an annual rate of 1.2 per 1,000. The 7 deaths for Dun Laoghaire include one from measles. Among the 29 deaths for Cork were one from measles and one from diarrhoea and enteritis of a child under 2 years of age.

**City of Dublin.**—The number of births registered during the week was 276—145 boys, and 131 girls. Exclusive of those, numbering 50, occurring in institutions of infants whose mothers were admitted from other localities, the number was 226, representing a rate of 27.5 per 1,000.

The number of deaths registered was 165—76 males and 89 females. Of the total, 15 related to persons belonging to other localities, so that the actual number of deaths for the city was 150, representing a rate of 18.2 per 1,000.

There were 12 deaths from the principal epidemic diseases, comprising 5 from measles, 2 from whooping-cough 4 from diphtheria and one from diarrhoea and enteritis of a child under 2 years of age. In the three preceding weeks deaths from measles were 6, 9 and 7, deaths from whooping cough were 0, 0 and 2, deaths from diphtheria were one, 0 and 6, and deaths from diarrhoea and enteritis of children under 2 years of age were 4, one and 0. There were 3 deaths from influenza.

Tuberculous disease caused 15 deaths (13 of which were from pulmonary tuberculosis, one from tuberculous meningitis and one from tuberculous peritonitis), as against 16, 16 and 14 from all forms of tuberculosis in the three preceding weeks.

Thirteen deaths were caused by cancer, and 25 by diseases of the heart.

There were 21 deaths from pneumonia, comprising 12 from broncho-pneumonia, 2 from lobar pneumonia, and 7 from pneumonia (not otherwise defined). Bronchitis caused 7 deaths.

There were 4 accidental deaths, 2 of which were caused by motor vehicles.

Among the deaths of infants under one year of age, 2 were due to measles, 2 to whooping-cough, 2 to influenza, one to diarrhoea and enteritis, one to bronchitis, 8 to pneumonia, 2 to premature birth, 3 to congenital malformation, and 3 to congenital debility.

Thirty-eight of the deaths recorded for the City during the week were those of children under 5 years of age, 25 being infants under one year, 6 of whom were under one month old, and 41 were those of persons aged 65 years and upwards, of whom 29 were aged 70 years or over.

Of the 150 deaths recorded, 75 occurred in hospitals, or other public institutions.

**CASES OF INFECTIOUS DISEASES.**—Table III. shows the numbers notified in the City of Dublin, and in the Boroughs; and Table IV. the number of cases of certain diseases treated in Dublin Hospitals.

**Northern Ireland and Great Britain.**—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 19.1 per 1,000 of the population, and for Londonderry 20.8.

In 121 County Boroughs and Great Towns of England and Wales (including London, in which the rate was 12.4) the mortality was 13.1 per 1,000 of the estimated resident population.

The average death-rate for 16 principal towns of Scotland was 17.3 per 1,000 persons living, the rate for Glasgow being 16.3 and for Edinburgh 21.5.

\* See note at foot of fourth page.

†Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE II.—Deaths registered during the week ended **Saturday, 2nd March, 1935**, for the City of Dublin and the County Borough of Cork\* by Registrars' Districts, with the mortality per 1,000 of the population from all causes and from the PRINCIPAL EPIDEMIC DISEASES.

NOTE.—For the purpose of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births, by the exclusion of those taking place in each urban area belonging to other localities but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2, Cork Rural No. 1 and No. 2, and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths of residents of the Boroughs occurring in the Registrars' Districts above named are included, as in the case of births. In addition, the deaths in Institutions situated in Registrars' Districts embracing the twelve towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions for Saorstát Éireann will be made in the Detailed Annual Report.

**PRINCIPAL TOWNS**

Particulars of the Births and Deaths\* recorded for the **Twelve Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Twelve Principal Towns, 19·0 and 18·4; City of Dublin, 21·4 and 19·8; Borough of Dun Laoghaire, 13·1 and 10·9; Cork, 11·3 and 15·5; Limerick, 25·1 and 19·5; and Waterford, 13·7 and 19·6.

The deaths from the principal epidemic diseases† recorded for the twelve principal towns last week were represented by an annual rate of 0·9 per 1,000. Among the 17 deaths for Cork were one from measles and one from diphtheria. The 19 deaths for Limerick include one from diphtheria and one from diarrhoea and enteritis of a child under 2 years of age.

**City of Dublin.**—The number of births registered during the week was 241—122 boys and 119 girls. Exclusive of those, numbering 25, occurring in institutions of infants whose mothers were admitted from other localities, the number was 216, representing a rate of 26·3 per 1,000.

The number of deaths registered was 190—94 males and 96 females. Of the total, 22 related to persons belonging to other localities and the deaths of 8 persons belonging to the city were registered in other districts, so that the actual number of deaths for the city was 176, representing a rate of 21·4 per 1,000.

There were 7 deaths from the principal epidemic diseases, comprising 3 from measles, one from scarlet fever and 3 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from measles were 9, 7 and 5, and deaths from diarrhoea and enteritis of children under 2 years of age were one, 0 and one. There were no deaths from scarlet fever in the three preceding weeks. Three deaths from influenza were registered.

Tuberculous disease caused 17 deaths (10 of which were from pulmonary tuberculosis, 6 from tuberculous meningitis and one from military tuberculosis), as against 16, 14 and 15 from all forms of tuberculosis in the three preceding weeks.

Fourteen deaths were caused by cancer, and 35 by diseases of the heart.

There were 22 deaths from pneumonia, comprising 13 from broncho-pneumonia, one from lobar pneumonia, and 8 from pneumonia (not otherwise defined). Bronchitis caused 14 deaths.

There were 4 accidental deaths, one of which was due to burns and 2 to injuries caused by vehicles.

Among the deaths of infants under one year of age, one was due to measles, 2 to tuberculous meningitis, 3 to diarrhoea and enteritis, one to bronchitis, 3 to pneumonia, 3 to premature birth, 2 to injury at birth, 5 to congenital malformation, and 6 to congenital debility.

Thirty-nine of the deaths recorded for the City during the week were those of children under 5 years of age, 27 being infants under one year, 10 of whom were under one month old, and 67 were those of persons aged 65 years and upwards of whom 49 were aged 70 years or over. Of the 176 deaths recorded, 91 occurred in hospitals, or other public institutions.

**CASES OF INFECTIOUS DISEASES.**—Table III. shows the numbers notified in the City of Dublin, and in the Boroughs; and Table IV. the number of cases of certain diseases treated in Dublin Hospitals.

**Northern Ireland and Great Britain.**—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 17·3 per 1,000 of the population, and for Londonderry 15·0.

In 121 County Boroughs and Great Towns of England and Wales (including London, in which the rate was 11·9) the mortality was 13·0 per 1,000 of the estimated resident population.

The average death-rate for 16 principal towns of Scotland was 15·4 per 1,000 persons living, the rate for Glasgow being 16·2 and for Edinburgh 15·5.

\* See note at foot of fourth page.

† Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

**TABLE I.**—BIRTHS and DEATHS registered (*a*) during the week ended **Saturday 9th March 1935**, for the **Twelve Principal Towns** of **LONDON**, **EDINBURGH**, and **GLASGOW**, and **LONDONDERRY** County Boroughs, with the **METEOROLOGY** for the week: also similar particulars for **LONDON**, **EDINBURGH**, and **GLASGOW**.

(a) See note at foot of fourth page. (b) According to the Census of 1926, but in the cases of the City of Dublin, and the Borough of Dún Laoghaire, the populations given are those estimated to the middle of 1935, while the estimate was for London relates to the resident population in 1933. The populations for Glasgow and Edinburgh are those estimated provisionally to the middle of 1935. (c) Observations at Ordnance Survey Office, Phoenix Park. (d) Observations by Sir John Moore, taken at Fitzwilliam Square (Sunshine returned by Trinity College). (e) Botanic Gardens, Glasnevin. (f) Markree.

TABLE II.—Deaths registered during the week ended Saturday, 9th March, 1935, for the City of Dublin and the County Borough of Cork\* by Registrars' Districts, with the mortality per 1,000 of the population from all causes and from the PRINCIPAL EPIDEMIC DISEASES.

See note at foot of fourth page.

The populations given for the Co. Borough of Cork and the Corporation of Cork are the populations of the County of Cork and the Corporation of Cork respectively.

(\*) See note at foot of fourth page.

(†) The populations given for the Co. Borough of Cork and its component parts are those according to the Census of 1926.

TABLE III.—Cases of Infectious Diseases notified in the undermentioned Urban areas during the week ended **Saturday, 9th March, 1935**, and during each of the three preceding weeks. A dash (—) denotes that the disease in question is not notifiable in the district.

| AREAS               | Week ended | Typhoid Fever | Typhus, Pyrexia and Small-pox | Measles | Scarlet Fever | Whooping-cough | Diphtheria (including Membranous Group) | Erysipelas | Puerperal Fever | Diarrhoeal Diseases | Dysentery & Malaria | Ophthalmia Neonatorum | Acute Primary Pneumonia and Acute Influenza Pneumonia | Cerebro-spinal Fever | Acute Poliomyelitis and Encephalitis Lethargica | Varicella | Tuberculosis | Total |

NOTE.—For the purpose of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births, by the exclusion of those taking place in each urban area belonging to other localities but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2, Cork Rural No. 1 and No. 2, and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths of residents of the Boroughs occurring in the Registrars' Districts above named are included, as in the case of births. In addition, the deaths in Institutions situated in Registrars' Districts embracing the twelve towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions for Saorstát Éireann will be made in the Detailed Annual Report.

## PRINCIPAL TOWNS

Particulars of the Births and Deaths\* recorded for the **Twelve Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Twelve Principal Towns, 20·4 and 18·7; City of Dublin, 22·0 and 20·5; Borough of Dun Laoghaire, 21·8 and 13·8; Cork, 18·6 and 16·1; Limerick, 15·9 and 16·5; and Waterford, 19·6 and 18·1.

The deaths from the principal epidemic diseases† recorded for the twelve principal towns last week were represented by an annual rate of 1·3 per 1,000. Among the 28 deaths for Cork were one from measles and 2 from diarrhoea and enteritis of children under 2 years of age. One of the 12 deaths for Limerick was from typhoid fever and one of the 5 deaths for Tralee was from whooping-cough.

**City of Dublin.**—The number of births registered during the week was 244—125 boys and 119 girls. Exclusive of those, numbering 29, occurring in institutions of infants whose mothers were admitted from other localities, the number was 215, representing a rate of 26·1 per 1,000.

The number of deaths registered was 207—104 males and 103 females. Of the total, 26 related to persons belonging to other localities, so that the actual number of deaths for the city was 181, representing a rate of 22·0 per 1,000.

There were 11 deaths from the principal epidemic diseases, comprising 6 from measles, 2 from whooping-cough, one from diphtheria and 2 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from measles were 7, 5 and 3; deaths from whooping-cough were 2, 2 and 0; deaths from diphtheria were 6, 4 and 0, and deaths from diarrhoea and enteritis of children under 2 years of age were 0, one and 3. Eight deaths from influenza were registered.

Tuberculous disease caused 18 deaths (16 of which were from pulmonary tuberculosis, and 2 from tuberculous meningitis), as against 14, 15 and 17 from all forms of tuberculosis in the three preceding weeks.

Six deaths were caused by cancer, and 33 by diseases of the heart.

There were 28 deaths from pneumonia, comprising 14 from broncho-pneumonia, 9 from lobar pneumonia, and 5 from pneumonia (not otherwise defined). Bronchitis caused 20 deaths.

There were 5 accidental deaths, one of which was due to burns, one to drowning and 3 to injuries caused by motor-vehicles.

Among the deaths of infants under one year of age, one was due to whooping-cough, one to pulmonary tuberculosis, one to convulsions, 2 to diarrhoea and enteritis, 4 to pneumonia, 8 to premature birth, one to congenital malformation, and 5 to congenital debility.

Forty-five of the deaths recorded for the City during the week were those of children under 5 years of age, 27 being infants under one year, 15 of whom were under one month old, and 52 were those of persons aged 65 years and upwards of whom 42 were aged 70 years or over.

Of the 181 deaths recorded, 93 occurred in hospitals, or other public institutions.

**CASES OF INFECTIOUS DISEASES.**—Table III. shows the numbers notified in the City of Dublin, and in the Boroughs; and Table IV. the number of cases of certain diseases treated in Dublin Hospitals.

**Northern Ireland and Great Britain.**—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 17·3 per 1,000 of the population, and for Londonderry 12·7.

In 121 County Boroughs and Great Towns of England and Wales (including London, in which the rate was 12·8) the mortality was 13·5 per 1,000 of the estimated resident population.

The average death-rate for 16 principal towns of Scotland was 17·0 per 1,000 persons living, the rate for Glasgow being 19·1 and for Edinburgh 17·7.

\* See note at foot of fourth page.

†Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE III.—Cases of Infectious Diseases notified in the undermentioned Urban areas during the week ended Saturday, 16th March, 1935, and during each of the three preceding weeks. A dash (—) denotes that the disease in question is not notifiable in the district.

| AREAS               | Week ended | Typhoid Fever | Typhus, Pyrexia and Small-pox | Measles | Scarlet Fever | Whooping-cough | Diphtheria (including Membranous Group) | Erysipelas | Puerperal Fever | Diarrhoeal Diseases | Dysentery & Malaria | Ophthalmia Neonatorum | Acute Primary Pneumonia and Acute Influenza Pneumonia | Cerebro-spinal Fever | Acute Poliomyelitis and Encephalitis Lethargica | Varicella | Tuberculosis | Total |

NOTE.—For the purpose of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births, by the exclusion of those taking place in each urban area belonging to other localities but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2, Cork Rural No. 1 and No. 2, and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths of residents of the Boroughs occurring in the Registrars' Districts above named are included, as in the case of births. In addition, the deaths in Institutions situated in Registrars' Districts embracing the twelve towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions for Saorstát Éireann will be made in the Detailed Annual Report.

**PRINCIPAL TOWNS**

Particulars of the Births and Deaths\* recorded for the **Twelve Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Twelve Principal Towns, 19·1 and 18·6; City of Dublin, 21·3 and 20·7; Borough of Dun Laoghaire, 8·7 and 13·5; Cork, 12·0 and 15·3; Limerick, 19·8 and 16·5; and Waterford, 11·7 and 13·7.

The deaths from the principal epidemic diseases† recorded for the twelve principal towns last week were represented by an annual rate of 1·1 per 1,000. Among the 6 deaths from all causes for Kilkenny was one from diphtheria.

**City of Dublin.**—The number of births registered during the week was 232—120 boys and 112 girls. Exclusive of those, numbering 27, occurring in institutions of infants whose mothers were admitted from other localities, the number was 205, representing a rate of 24·9 per 1,000.

The number of deaths registered was 200—91 males and 109 females. Of the total, 30 related to persons belonging to other localities, and the deaths of 5 persons belonging to the city were registered in an adjoining district, so that the actual number of deaths for the city was 175, representing a rate of 21·3 per 1,000.

There were 12 deaths from the principal epidemic diseases, comprising 4 from measles, 6 from diphtheria and 2 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from measles were 5, 3 and 6; deaths from diphtheria were 4, 0 and one, and deaths from diarrhoea and enteritis of children under 2 years of age were one, 3 and 2. Eleven deaths from influenza were registered.

Tuberculous disease caused 19 deaths (14 of which were from pulmonary tuberculosis, 3 from tuberculous meningitis, and 2 from other forms of tuberculous disease), as against 15, 17 and 18 from all forms of tuberculosis in the three preceding weeks.

Eleven deaths were caused by cancer, and 33 by diseases of the heart.

There were 19 deaths from pneumonia, comprising 12 from broncho-pneumonia, 4 from lobar pneumonia, and 3 from pneumonia (not otherwise defined). Bronchitis caused 20 deaths.

There were 3 accidental deaths, one of which was due to scalds.

Among the deaths of infants under one year of age, one was due to measles, one to influenza, one to convulsions, 2 to diarrhoea and enteritis, one to pneumonia, one to bronchitis, 4 to premature birth, and 4 to congenital debility.

Thirty-six of the deaths recorded for the City during the week were those of children under 5 years of age, 20 being infants under one year, 10 of whom were under one month old, and 60 were those of persons aged 65 years and upwards, of whom 51 were aged 70 years or over.

Of the 175 deaths recorded, 84 occurred in hospitals or other public institutions.

**CASES OF INFECTIOUS DISEASES.**—Table III. shows the numbers notified in the City of Dublin, and in the Boroughs; and Table IV. the number of cases of certain diseases treated in Dublin Hospitals.

**Northern Ireland and Great Britain.**—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 18·7 per 1,000 of the population, and for Londonderry 12·7.

In 121 County Boroughs and Great Towns of England and Wales (including London, in which the rate was 13·4) the mortality was 14·3 per 1,000 of the estimated resident population.

The average death-rate for 16 principal towns of Scotland was 18·8 per 1,000 persons living, the rate for Glasgow being 22·0 and for Edinburgh 15·0.

\* See note at foot of fourth page.

† Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS AND DEATHS registered (a) during the week ended Saturday 23<sup>rd</sup> March, 1935, for the Twelve Principal Towns of Saorstát Éireann and Belfast and LONDONDERRY County Boroughs, with the METEOROLOGY for the week; also similar particulars for LONDON, EDINBURGH, and GLASGOW.

NOTE.—For the purpose of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births, by the exclusion of those taking place in each urban area belonging to other localities but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2, Cork Rural No. 1 and No. 2, and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths of residents of the Boroughs occurring in the Registrars' Districts above named are included, as in the case of births. In addition, the deaths in Institutions situated in Registrars' Districts embracing the twelve towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions for Saorstát Éireann will be made in the Detailed Annual Report.

## PRINCIPAL TOWNS

Particulars of the Births and Deaths\* recorded for the **Twelve Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population :—

Twelve Principal Towns, 18·6 and 19·3; City of Dublin, 18·2 and 20·7; Borough of Dun Laoghaire, 14·5 and 14·5; Cork, 18·6 and 15·1; Limerick, 15·9 and 19·2; and Waterford, 11·7 and 14·2.

The deaths from the principal epidemic diseases† recorded for the twelve principal towns last week were represented by an annual rate of 1·0 per 1,000. Among the 28 deaths from all causes for Cork were one from measles and one from whooping-cough. The 7 deaths for Drogheda include one from diphtheria.

**City of Dublin.**—The number of births registered during the week was 294—162 boys and 132 girls. Exclusive of those, numbering 29, occurring in institutions of infants whose mothers were admitted from other localities, the number was 265, representing a rate of 32·2 per 1,000.

The number of deaths registered was 164—71 males and 93 females. Of the total, 14 related to persons belonging to other localities, so that the actual number of deaths for the city was 150, representing a rate of 18·2 per 1,000.

There were 8 deaths from the principal epidemic diseases, comprising 5 from measles, one from diphtheria and 2 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from measles were 3, 6 and 4; deaths from diphtheria were 0, one and 6, and deaths from diarrhoea and enteritis of children under 2 years of age were 3, 2 and 2. Seven deaths from influenza were registered.

Tuberculous disease caused 19 deaths (16 of which were from pulmonary tuberculosis, 2 from tuberculous meningitis, and one from tuberculous peritonitis), as against 17, 18 and 19 from all forms of tuberculosis in the three preceding weeks.

Seventeen deaths were caused by cancer, and 20 by diseases of the heart.

There were 17 deaths from pneumonia, comprising 7 from broncho-pneumonia, 4 from lobar pneumonia, and 6 from pneumonia (not otherwise defined). Bronchitis caused 17 deaths.

There were 4 accidental deaths, one of which was due to burns, and one to injuries caused by a motor vehicle.

Among the deaths of infants under one year of age 2 were due to measles, one to cerebro-spinal fever, 2 to diarrhoea and enteritis, 4 to pneumonia, 3 to bronchitis, one to premature birth, and 2 to congenital debility.

Twenty-three of the deaths recorded for the City during the week were those of children under 5 years of age, 16 being infants under one year, 2 of whom were under one month old, and 47 were those of persons aged 65 years and upwards, of whom 39 were aged 70 years or over.

Of the 150 deaths recorded, 72 occurred in hospitals or other public institutions.

**CASES OF INFECTIOUS DISEASES.**—Table III. shows the numbers notified in the City of Dublin, and in the Boroughs; and Table IV. the number of cases of certain diseases treated in Dublin Hospitals.

**Northern Ireland and Great Britain.**—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 16·1 per 1,000 of the population, and for Londonderry 12·7.

In 121 County Boroughs and Great Towns of England and Wales (including London, in which the rate was 13·5) the mortality was 13·4 per 1,000 of the estimated resident population.

The average death-rate for 16 principal towns of Scotland was 16·3 per 1,000 persons living, the rate for Glasgow being 17·7 and for Edinburgh 14·4.

\* See note at foot of fourth page.

†Typhoid fever, typhus small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 30th March, 1935, for the Twelve Principal Towns of Saorstát Éireann and Belfast and LONDONDERRY County Boroughs, with the METEOROLOGY for the week; also similar particulars for LONDON, EDINBURGH, and GLASGOW.

(a) See note at foot of fourth page. (b) According to the Census of 1926, but in the cases of the City of Dublin, and the Borough of Dun Laoghaire, the populations given are those estimated to the middle of 1935, while the estimate shown for London relates to the resident population in 1933. The populations for Glasgow and Edinburgh are those estimated provisionally to the middle of 1935. (c) Observations at Ordnance Survey Office, Phoenix Park. (d) Observations by Sir John Moore, taken at Fitzwilliam Square, (Sunshine returned by Trinity College). (e) Botanic Garden, Glasnevin. (f) Marker. (g) Typhoid fever.

TABLE II.—Deaths registered during the week ended **Saturday, 30th March, 1935**, for the City of Dublin and the County Borough of Cork\* by Registrars' Districts, with the mortality per 1,000 of the population from all causes and from the PRINCIPAL EPIDEMIC DISEASES.

NOTE.—For the purpose of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births, by the exclusion of those taking place in each urban area belonging to other localities but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2, Cork Rural No. 1 and No. 2, and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths of residents of the Boroughs occurring in the Registrars' Districts above named are included, as in the case of births. In addition, the deaths in Institutions situated in Registrars' Districts embracing the twelve towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions for Saorstát Éireann will be made in the Detailed Annual Report.

## PRINCIPAL TOWNS

Particulars of the Births and Deaths\* recorded for the Twelve Principal Towns are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population :—

Twelve Principal Towns, 18.1 and 19.1; City of Dublin, 16.4 and 19.5; Borough of Dun Laoghaire, 20.3 and 16.3; Cork, 21.3 and 17.6; Limerick, 30.4 and 20.5; and Waterford, 31.3 and 18.6.

The deaths from the principal epidemic diseases† recorded for the twelve principal towns last week were represented by an annual rate of 0.9 per 1,000. Among the 32 deaths from all causes for Cork were 3 from diarrhoea and enteritis of children under 2 years; the 23 deaths for Limerick included 2 from measles and one from diphtheria; and one of the 16 deaths for Waterford was from diphtheria.

**City of Dublin.**—The number of births registered during the week was 235—129 boys and 106 girls. Exclusive of those, numbering 56, occurring in institutions of infants whose mothers were admitted from other localities, the number was 199, representing a rate of 24.7 per 1,000.

The number of deaths registered was 151—84 males and 66 females. Of the total, 19 related to persons belonging to other localities, and the deaths of 4 persons belonging to the city were registered in adjoining districts\* so that the actual number of deaths for the city was 135, representing a rate of 16.4 per 1,000.

There were 2 deaths from the principal epidemic diseases, comprising one from measles and one from diphtheria. In the three preceding weeks deaths from measles were 6, 4 and 5, and deaths from diphtheria were one, 6 and one. Two deaths from influenza were registered.

Tuberculous disease caused 19 deaths (17 of which were from pulmonary tuberculosis, one from tuberculous peritonitis, and one from tuberculous disease of spine), as against 18, 19 and 19 from all forms of tuberculosis in the three preceding weeks.

Four deaths were caused by cancer, and 20 by diseases of the heart.

There were 21 deaths from pneumonia, comprising 16 from broncho-pneumonia, 2 from lobar pneumonia, and 3 from pneumonia (not otherwise defined). Bronchitis caused 13 deaths.

Three accidental deaths were registered, one of which was due to burns and 2 to injuries caused by motor vehicles. There was also one death by homicide.

Among the deaths of infants under one year of age, 5 were due to pneumonia, 3 to premature birth, 2 to congenital malformation, and 3 to congenital debility.

Thirty-two of the deaths recorded for the City during the week were those of children under 5 years of age, 17 being infants under one year, 5 of whom were under one month old, and 42 were those of persons aged 65 years and upwards, of whom 35 were aged 70 years or over.

Of the 135 deaths recorded, 74 occurred in hospitals or other public institutions.

**CASES OF INFECTIOUS DISEASES.**—Table III. shows the numbers notified in the City of Dublin, and in the Boroughs; and Table IV., the number of cases of certain diseases treated in Dublin Hospitals.

**Northern Ireland and Great Britain.**—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 15.6 per 1,000 of the population, and for Londonderry 16.2.

In 121 County Boroughs and Great Towns of England and Wales (including London, in which the rate was 12.2) the mortality was 12.8 per 1,000 of the estimated resident population.

The average death-rate for 16 principal towns of Scotland was 14.5 per 1,000 persons living, the rate for Glasgow being 15.9 and for Edinburgh 14.0.

\* See note at foot of fourth page.

†Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 6th April, 1935, for the Twelve Principal Towns of Saorstát Éireann and BELFAST and LONDONDERRY County Boroughs, with the METEOROLOGY for the week; also similar particulars for LONDON, EDINBURGH, and GLASGOW.

| PRINCIPAL TOWNS     | POPULATION (A) | Annual Rate per 1,000 persons registered by                                      |                                  | BIRTHS | DEATHS       |                     |                      |   |         |               |                |            |  |              | CAUSED BY |        |                             |      |          |               |                        |                    |                  |                 | METEOROLOGY                        |                      |                      |                      |                          |                      |      |   |   |  |

(a) See note at foot of fourth page. (b) According to the Census of 1926, but in the cases of the City of Dublin, and the Borough of Dún Laoghaire, the populations given are those estimated to the middle of 1935, while the estimate shown for London relates to the resident population in 1933. The populations for Glasgow and Edinburgh are those estimated provisionally to the middle of 1935. (c) Observations at Ordnance Survey Office, Phoenix Park. (d) Observations by Sir John Moore, taken at Fitzwilliam Square (Sunshine returned by Trinity College). (e) Botanic Gardens, Glasnevin, Markree.

TABLE II.—Deaths registered during the week ended **Saturday, 6th April, 1935**, for the **City of Dublin** and the **County Borough of Cork**\* by Registrars' Districts, with the mortality per 1,000 of the population from all causes and from the **PRINCIPAL EPIDEMIC DISEASES**.

**NOTE.**—For the purpose of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births, by the exclusion of those taking place in each urban area belonging to other localities but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2, Cork Rural No. 1 and No. 2, and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths of residents of the Boroughs occurring in the Registrars' Districts above named are included, as in the case of births. In addition, the deaths in Institutions situated in Registrars' Districts embracing the twelve towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions for Saorstát Éireann will be made in the Detailed Annual Report.

## PRINCIPAL TOWNS

Particulars of the Births and Deaths\* recorded for the **Twelve Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population :—

Twelve Principal Towns, 17·3 and 18·3; City of Dublin, 16·9 and 18·2; Borough of Dun Laoghaire, 16·0 and 14·9; Cork, 13·3 and 16·3; Limerick, 14·5 and 20·2; and Waterford, 25·4 and 20·0.

The deaths from the principal epidemic diseases† recorded for the twelve principal towns last week were represented by an annual rate of 1·3 per 1,000. Among the 20 deaths from all causes for Cork were one from diphtheria and 2 from diarrhoea and enteritis of children under 2 years.

**City of Dublin.**—The number of births registered during the week was 299—152 boys and 147 girls. Exclusive of those, numbering 42, occurring in institutions of infants whose mothers were admitted from other localities, the number was 257, representing a rate of 31·3 per 1,000.

The number of deaths registered was 156—79 males and 77 females. Of the total, 19 related to persons belonging to other localities, and the deaths of 2 persons belonging to the city were registered in adjoining districts\* so that the actual number of deaths for the city was 139, representing a rate of 16·9 per 1,000.

There were 12 deaths from the principal epidemic diseases, comprising 3 from measles 3 from diphtheria and 6 from diarrhoea and enteritis of children under 2 years. In the three preceding weeks deaths from measles were 4, 5 and one, deaths from diphtheria were 6, one and one, and deaths from diarrhoea and enteritis were 2, 2, and 0. Three deaths from influenza were registered.

Tuberculous disease caused 8 deaths (5 of which were from pulmonary tuberculosis, one from tuberculous meningitis, and 2 from other forms of tuberculous disease), as against 19, 19 and 19 from all forms of tuberculosis in the three preceding weeks.

Ten deaths were caused by cancer, and 21 by diseases of the heart.

There were 6 deaths from pneumonia, comprising 5 from broncho-pneumonia, and one from pneumonia (not otherwise defined). Bronchitis caused 19 deaths.

Nine accidental deaths were registered, 4 of which were due to burns and one to injuries caused by a motor vehicle.

Among the deaths of infants under one year of age, one was due to convulsions, 3 to pneumonia, 6 to diarrhoea and enteritis, 3 to premature birth, 3 to congenital malformation, and one to congenital debility.

Thirty-five of the deaths recorded for the City during the week were those of children under 5 years of age, 24 being infants under one year, 11 of whom were under one month old, and 45 were those of persons aged 65 years and upwards, of whom 29 were aged 70 years or over.

Of the 139 deaths recorded, 69 occurred in hospitals or other public institutions.

**CASES OF INFECTIOUS DISEASES.**—Table III. shows the numbers notified in the City of Dublin, and in the Boroughs; and Table IV., the number of cases of certain diseases treated in Dublin Hospitals.

**Northern Ireland and Great Britain.**—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 18·0 per 1,000 of the population, and for Londonderry, 17·3.

In 121 County Boroughs and Great Towns of England and Wales (including London, in which the rate was 12·5) the mortality was 13·5 per 1,000 of the estimated resident population.

The average death-rate for 16 principal towns of Scotland was 15·1 per 1,000 persons living, the rate for Glasgow being 13·9 and for Edinburgh 13·2.

\* See note at foot of fourth page.

†Typhoid fever, typhus small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 13th April, 1935, for the Twelve Principal Towns of Saorstát Éireann and Belfast and LONDONDERRY County Boroughs, with the METEOROLOGY for the week; also similar particulars for LONDON, EDINBURGH, and GLASGOW.

| PRINCIPAL TOWNS | POPULATION (b) | Annual Rate per 1,000 persons represented by |                                  | BIRTHS |     | TOTAL DEATHS |     | Under 1 year of Age |     | 65 years and (a) See note at foot of fourth page. (b) According to the Census of 1926, but in the cases of the City of Dublin, and the Borough of Dun Laoghaire, the populations given are those estimated to the middle of 1935, while the estimate shown for London relates to the resident population in 1933. The populations for Glasgow and Edinburgh are those estimated provisionally to the middle of 1935. (c) Observations at Ordnance Survey Office, Phoenix Park. (d) Observations by Sir John Moore, taken at Fitzwilliam Square (Sunshine returned by Trinity College). (e) Botanic Gardens, Glasnevin. (f) Marree. (g) Typhoid Fever.

TABLE II.—Deaths registered during the week ended **Saturday, 13th April, 1935**, for the City of Dublin and the County Borough of Cork\* by Registrars' Districts, with the mortality per 1,000 of the population from all causes and from the PRINCIPAL EPIDEMIC DISEASES.

NOTE.—For the purpose of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births, by the exclusion of those taking place in each urban area belonging to other localities but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2, Cork Rural No. 1 and No. 2, and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths of residents of the Boroughs occurring in the Registrars' Districts above named are included, as in the case of births. In addition, the deaths in Institutions situated in Registrars' Districts embracing the twelve towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions for Saorstát Éireann will be made in the Detailed Annual Report.

## PRINCIPAL TOWNS

Particulars of the Births and Deaths\* recorded for the **Twelve Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Twelve Principal Towns, 15·9 and 17·5; City of Dublin, 16·2 and 16·9; Borough of Dun Laoghaire, 11·6 and 15·6; Cork, 14·6 and 17·0; Limerick, 13·2 and 18·5; and Waterford, 31·3 and 24·9.

The deaths from the principal epidemic diseases† recorded for the twelve principal towns last week were represented by an annual rate of 0·9 per 1,000. Among the 16 deaths from all causes for Waterford were one from diphtheria, and one from diarrhoea and enteritis of a child under 2 years of age.

**City of Dublin.**—The number of births registered during the week was 207—99 boys and 108 girls. Exclusive of those, numbering 28, occurring in institutions of infants whose mothers were admitted from other localities, the number was 179, representing a rate of 21·8 per 1,000.

The number of deaths registered was 154—78 males and 76 females. Of the total, 22 related to persons belonging to other localities, and the death of one person belonging to the city was registered in Cork City\* so that the actual number of deaths for the city was 133, representing a rate of 16·2 per 1,000.

There were 9 deaths from the principal epidemic diseases, comprising one from measles, one from whooping-cough, one from diphtheria and 6 from diarrhoea and enteritis of children under 2 years. In the three preceding weeks deaths from measles were 5, one and 3; deaths from diphtheria were one, one and 3, and deaths from diarrhoea and enteritis were 2, 0 and 6. There were no deaths from whooping-cough in the three previous weeks.

Tuberculous disease caused 19 deaths (12 of which were from pulmonary tuberculosis, 3 from tuberculous meningitis, and 4 from other forms of tuberculous disease), as against 19, 19 and 8 from all forms of tuberculosis in the three preceding weeks.

Twelve deaths were caused by cancer, and 18 by diseases of the heart.

There were 17 deaths from pneumonia, comprising 11 from broncho-pneumonia, and 6 from pneumonia (not otherwise defined). Bronchitis caused 6 deaths.

Among the deaths of infants under one year of age, one was due to whooping-cough, 3 to tuberculous disease, 7 to pneumonia, 6 to diarrhoea and enteritis, one to premature birth, and 3 to congenital debility.

Twenty-seven of the deaths recorded for the City during the week were those of children under 5 years of age, 18 being infants under one year, 3 of whom were under one month old, and 41 were those of persons aged 65 years and upwards, of whom 32 were aged 70 years or over.

Of the 133 deaths recorded, 76 occurred in hospitals or other public institutions.

**CASES OF INFECTIOUS DISEASES.**—Table III. shows the numbers notified in the City of Dublin, and in the Boroughs; and Table IV., the number of cases of certain diseases treated in Dublin Hospitals.

**Northern Ireland and Great Britain.**—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 15·6 per 1,000 of the population, and for Londonderry 27·7.

In 121 County Boroughs and Great Towns of England and Wales (including London, in which the rate was 11·7) the mortality was 12·9 per 1,000 of the estimated resident population.

The average death-rate for 16 principal towns of Scotland was 13·7 per 1,000 persons living, the rate for Glasgow being 14·0 and for Edinburgh 12·3.

\* See note at foot of fourth page.

†Typhoid fever, typhus small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE II.—Deaths registered during the week ended **Saturday, 20th April, 1935**, for the City of Dublin and the **County Borough of Cork**\* by Registrars' Districts, with the mortality per 1,000 of the population from all causes and from the **PRINCIPAL EPIDEMIC DISEASES**.

NOTE.—For the purpose of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births, by the exclusion of those taking place in each urban area belonging to other localities but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2, Cork Rural No. 1 and No. 2, and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths of residents of the Boroughs occurring in the Registrars' Districts above named are included, as in the case of births. In addition, the deaths in Institutions situated in Registrars' Districts embracing the twelve towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions for Saorstát Éireann will be made in the Detailed Annual Report.

**PRINCIPAL TOWNS**

Particulars of the Births and Deaths\* recorded for the **Twelve Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Twelve Principal Towns, 15·6 and 16·7; City of Dublin, 14·6 and 16·0; Borough of Dun Laoghaire, 16·0 and 16·0; Cork, 21·3 and 17·6; Limerick, 23·8 and 20·5; and Waterford, 13·7 and 25·4.

The deaths from the principal epidemic diseases† recorded for the twelve principal towns last week were represented by an annual rate of 1·0 per 1,000. Among the 32 deaths from all causes for Cork were 2 from diarrhoea and enteritis of children under 2 years of age; and the 18 deaths for Limerick included four from measles and one from diarrhoea and enteritis of a child under 2 years of age.

**City of Dublin.**—The number of births registered during the week was 233—115 boys and 118 girls. Exclusive of those, numbering 38, occurring in institutions of infants whose mothers were admitted from other localities, the number was 195, representing a rate of 23·7 per 1,000.

The number of deaths registered was 138—76 males and 62 females. Of the total, 18 related to persons belonging to other localities, so that the actual number of deaths for the city was 120, representing a rate of 14·6 per 1,000.

There were 6 deaths from the principal epidemic diseases, comprising 4 from diphtheria and 2 from diarrhoea and enteritis of children under 2 years. In the three preceding weeks deaths from diphtheria were one, 3 and one, and deaths from diarrhoea and enteritis were 0, 6 and 6.

Tuberculous disease caused 10 deaths (9 of which were from pulmonary tuberculosis and one from tuberculous meningitis), as against 19, 8 and 19 from all forms of tuberculosis in the three preceding weeks.

Fifteen deaths were caused by cancer, and 18 by diseases of the heart.

There were 19 deaths from pneumonia, comprising 12 from broncho-pneumonia, one from lobar pneumonia, and 6 from pneumonia (not otherwise defined). Bronchitis caused 8 deaths.

Among the deaths of infants under one year of age, one was due to convulsions, 5 to pneumonia, 2 to diarrhoea and enteritis, one to premature birth, and one to congenital debility.

Twenty-one of the deaths recorded for the City during the week were those of children under 5 years of age, 14 being infants under one year, 4 of whom were under one month old, and 34 were those of persons aged 65 years and upwards, of whom 23 were aged 70 years or over.

Of the 120 deaths recorded, 56 occurred in hospitals or other public institutions.

**CASES OF INFECTIOUS DISEASES.**—Table III. shows the numbers notified in the City of Dublin, and in the Boroughs; and Table IV., the number of cases of certain diseases treated in Dublin Hospitals.

**Northern Ireland and Great Britain.**—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 14·6 per 1,000 of the population, and for Londonderry 16·2.

In 121 County Boroughs and Great Towns of England and Wales (including London, in which the rate was 11·5) the mortality was 12·5 per 1,000 of the estimated resident population.

The average death-rate for 16 principal towns of Scotland was 13·9 per 1,000 persons living, the rate for Glasgow being 14·4 and for Edinburgh 12·9.

\* See note at foot of fourth page.

† Typhoid fever, typhus small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 27th April, 1935, for the Twelve Principal Towns of Saorstát Éireann and BELFAST and LONDONDERRY County Boroughs, with the METEOROLOGY for the week; also similar particulars for LONDON, EDINBURGH, and GLASGOW.

| PRINCIPAL TOWNS | POPULATION (b) | Annual Rate per 1,000 persons registered by |     | BIRTHS       |     | DEATHS                           |     | TOTAL DEATHS                     |     | CAUSED BY           |      |                      |      |                             |      |              |      |        |      |                             |      | METEOROLOGY |      | (a) See note at foot of fourth page. (b) According to the Census of 1926, but in the cases of the City of Dublin, and the Borough of Dún Laoghaire, the populations given are those estimated to the middle of 1935. (c) Observations at Ordnance Survey Office, Phoenix Park. (d) Observations by Sir John Moore, taken at Fitzwilliam Square (Sunshine returned by Trinity College). (e) Botanic Gardens, Glasnevin. (f) Markree.

TABLE III.—Cases of Infectious Diseases notified in the undermentioned Urban areas during the week ended **Saturday, 27th April, 1935**, and during each of the three preceding weeks. A dash (—) denotes that the disease in question is not notifiable in the district.

| AREAS               | Week ended | Typhoid Fever | Typhus, Pyrexia and Small-pox | Measles | Scarlet Fever | Whooping-cough | Diphtheria (including Membranous Group) | Erysipelas | Puerperal Fever | Diarrhoeal Diseases | Dysentery & Malaria | Ophthalmia | Neonatorum | Acute Primary Pneumonia and Acute Influenza Pneumonia | Cerebro-spinal Fever | Acute Polymyelitis and Encephalitis Lethargica | Varicella | Tuberculosis | Total |

NOTE.—For the purpose of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births, by the exclusion of those taking place in each urban area belonging to other localities but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2, Cork Rural No. 1 and No. 2, and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths of residents of the Boroughs occurring in the Registrars' Districts above named are included, as in the case of births. In addition, the deaths in Institutions situated in Registrars' Districts embracing the twelve towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions for Saorstát Éireann will be made in the Detailed Annual Report.

**PRINCIPAL TOWNS**

Particulars of the Births and Deaths\* recorded for the **Twelve Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Twelve Principal Towns, 15.2 and 16.0; City of Dublin, 15.1 and 15.7; Borough of Dun Laoghaire, 14.5 and 14.5; Cork, 14.6 and 16.0; Limerick, 13.2 and 16.2; and Waterford, 27.4 and 24.5.

The deaths from the principal epidemic diseases† recorded for the twelve principal towns last week were represented by an annual rate of 0.5 per 1,000. Among the 10 deaths from all causes for Limerick were 3 from measles; and, one of the 6 deaths for Drogheda was from diphtheria.

**City of Dublin.**—The number of births registered during the week was 264—133 boys and 128 girls. Exclusive of those, numbering 32, occurring in institutions of infants whose mothers were admitted from other localities, the number was 232, representing a rate of 28.2 per 1,000.

The number of deaths registered was 139—67 males and 72 females. Of the total, 16 related to persons belonging to other localities and the death of one person belonging to the City was registered in an adjoining district\* so that the actual number of deaths for the city was 124, representing a rate of 15.1 per 1,000.

There were 3 deaths from the principal epidemic diseases, comprising 2 from measles and one from diarrhoea and enteritis of a child under 2 years. In the three preceding weeks deaths from measles were 3, one and 0, and deaths from diarrhoea and enteritis were 6, 6 and 2.

Tuberculous disease caused 21 deaths (14 of which were from pulmonary tuberculosis 6 from tuberculous meningitis and one from miliary tuberculosis), as against 8, 19 and 10 from all forms of tuberculosis in the three preceding weeks.

Nine deaths were caused by cancer, and 25 by diseases of the heart.

There were 19 deaths from pneumonia, comprising 11 from broncho-pneumonia, 6 from lobar pneumonia, and 2 from pneumonia (not otherwise defined). Bronchitis caused 7 deaths.

Among the deaths of infants under one year of age, 2 were due to measles, 3 to tuberculous disease, one to convulsions, 4 to pneumonia, one to diarrhoea and enteritis, 3 to premature birth, 2 to congenital malformation, and one to congenital debility.

Twenty-five of the deaths recorded for the City during the week were those of children under 5 years of age, 18 being infants under one year, 4 of whom were under one month old, and 36 were those of persons aged 65 years and upwards, of whom 27 were aged 70 years or over.

Of the 124 deaths recorded, 53 occurred in hospitals or other public institutions.

**CASES OF INFECTIOUS DISEASES.**—Table III. shows the numbers notified in the City of Dublin, and in the Boroughs; and Table IV., the number of cases of certain diseases treated in Dublin Hospitals.

**Northern Ireland and Great Britain.**—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 16.1 per 1,000 of the population, and for Londonderry 16.2.

In 121 County Boroughs and Great Towns of England and Wales (including London, in which the rate was 11.8) the mortality was 12.3 per 1,000 of the estimated resident population.

The average death-rate for 16 principal towns of Scotland was 14.2 per 1,000 persons living, the rate for Glasgow being 13.6 and for Edinburgh 14.8.

\* See note at foot of fourth page.

†Typhoid fever, typhus small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 4th May, 1935, for the Twelve Principal Towns of Saorstát Éireann and BELFAST and LONDONDERRY County Boroughs, with the METEOROLOGY for the week; also similar particulars for LONDON, EDINBURGH, and GLASGOW.

| PRINCIPAL TOWNS | POPULATION (b) | Annual Rate per 1,000 persons registered by |                                  | BIRTHS       |              | DEATHS                      |               |                |            |  |           |           |             |         |                              |         |               | CAUSED BY      |            |        |  |           |          | (a) See note at foot of fourth page. (b) According to the Census of 1926, but in the cases of the City of Dublin, and the Borough of Dún Laoghaire, the populations given are those estimated to the middle of 1935, while the estimate shown for London relates to the resident population in 1933. The populations for Glasgow and Edinburgh are those estimated provisionally to the middle of 1935. (c) Observations at Ordnance Survey office, Phoenix Park. (d) Observations by Sir John Moore, taken at Fitzwilliam Square (Sunshine returned by Trinity College). (e) Botanic Gardens, Glasnevin. (f) Markree, (g) Typhoid Fever.

TABLE II.—Deaths registered during the week ended **Saturday, 4th May, 1935**, for the City of Dublin and the County Borough of Cork\* by Registrars' Districts, with the mortality per 1,000 of the population from all causes and from the PRINCIPAL EPIDEMIC DISEASES.

NOTE.—For the purpose of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births, by the exclusion of those taking place in each urban area belonging to other localities but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2, Cork Rural No. 1 and No. 2, and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths of residents of the Boroughs occurring in the Registrars' Districts above named are included, as in the case of births. In addition, the deaths in Institutions situated in Registrars' Districts embracing the twelve towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions for Saorstát Éireann will be made in the Detailed Annual Report.

## PRINCIPAL TOWNS

Particulars of the Births and Deaths\* recorded for the **Twelve Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Twelve Principal Towns, 18.3 and 16.3; City of Dublin, 18.8 and 16.2; Borough of Dun Laoghaire, 17.4 and 14.9; Cork, 15.9 and 16.6; Limerick, 23.8 and 18.5; and Waterford, 27.4 and 25.0.

The deaths from the principal epidemic diseases† recorded for the twelve principal towns last week were represented by an annual rate of 0.7 per 1,000. Among the 24 deaths from all causes for Cork were 2 from diarrhoea and enteritis of children under 2 years; the 18 deaths for Limerick included 4 from measles; and, one of the 6 deaths for Drogheda was from diphtheria.

**City of Dublin.**—The number of births registered during the week was 268—143 boys and 125 girls. Exclusive of those, numbering 36, occurring in institutions of infants whose mothers were admitted from other localities, the number was 232, representing a rate of 28.2 per 1,000.

The number of deaths registered was 183—97 males and 86 females. Of the total, 29 related to persons belonging to other localities and the death of one person belonging to the City was registered in an adjoining district\* so that the actual number of deaths for the city was 155, representing a rate of 18.8 per 1,000.

There were 2 deaths from the principal epidemic diseases, comprising one from measles and one from diphtheria. In the three preceding weeks deaths from measles were one, 0 and 2, and deaths from diphtheria were one, 4 and 0.

Tuberculous disease caused 21 deaths (18 of which were from pulmonary tuberculosis, one from tuberculous meningitis and 2 from other forms of tuberculous disease), as against 19, 10 and 21 from all forms of tuberculosis in the three preceding weeks.

Fourteen deaths were caused by cancer, and 17 by diseases of the heart.

There were 16 deaths from pneumonia, comprising 7 from broncho-pneumonia, 6 from lobar pneumonia, and 3 from pneumonia (not otherwise defined). Bronchitis caused 12 deaths.

Two accidental deaths were registered, one of which was due to drowning, and one to injuries caused by a motor vehicle.

Among the deaths of infants under one year of age, one was due to meningitis, one to convulsions, 3 to pneumonia, 10 to premature birth, 2 to congenital malformation, and 5 to congenital debility.

Forty of the deaths recorded for the City during the week were those of children under 5 years of age, 26 being infants under one year, 16 of whom were under one month old, and 40 were those of persons aged 65 years and upwards, of whom 33 were aged 70 years or over.

Of the 155 deaths recorded, 82 occurred in hospitals or other public institutions.

**CASES OF INFECTIOUS DISEASES.**—Table III. shows the numbers notified in the City of Dublin, and in the Boroughs; and Table IV., the number of cases of certain diseases treated in Dublin Hospitals.

**Northern Ireland and Great Britain.**—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 11.6 per 1,000 of the population, and for Londonderry 10.4.

In 121 County Boroughs and Great Towns of England and Wales (including London, in which the rate was 10.8) the mortality was 11.4 per 1,000 of the estimated resident population.

The average death-rate for 16 principal towns of Scotland was 13.7 per 1,000 persons living, the rate for Glasgow being 13.6 and for Edinburgh 13.3.

\* See note at foot of fourth page.

†Typhoid fever, typhus small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS AND DEATHS registered (a) during the week ended Saturday, 11th May, 1935, for the Twelve Principal Towns of Saorstát Éireann and Belfast 74

[illegible]

(a) See note at foot of fourth page. (b) According to the Census of 1926, but in the cases of the City of Dublin, and the Borough of Dún Laoghaire, the populations given are those estimated to the middle of 1935, while the estimate shown for London relates to the resident population in 1933. The populations for Glasgow and Edinburgh are those estimated provisionally to the middle of 1935. (c) Observations at Ordnance Survey (Oree, Phoenix Park. (d) Observations by Sir John Moore, taken at Fitzwilliam Square (Sunshine returned by Trinity College). (e) Botanic Gardens, Glasnevin. (f) Markree. (g) Typhoid Fever.

TABLE III.—Cases of Infectious Diseases notified in the undermentioned Urban areas during the week ended Saturday, 11th May, 1935, and during each of the three preceding weeks. A dash (—) denotes that the disease in question is not notifiable in the district.

NOTE.—For the purpose of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births, by the exclusion of those taking place in each urban area belonging to other localities but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2, Cork Rural No. 1 and No. 2, and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths of residents of the Boroughs occurring in the Registrars' Districts above named are included, as in the case of births. In addition, the deaths in Institutions situated in Registrars' Districts embracing the twelve towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions for Saorstát Éireann will be made in the Detailed Annual Report.

## PRINCIPAL TOWNS

Particulars of the Births and Deaths\* recorded for the **Twelve Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Twelve Principal Towns, 14·3 and 15·9; City of Dublin, 14·3 and 15·7; Borough of Dun Laoghaire, 14·5 and 15·6; Cork, 15·3 and 19·3; Limerick, 11·9 and 18·2; and Waterford, 17·6 and 21·5.

The deaths from the principal epidemic diseases† recorded for the twelve principal towns last week were represented by an annual rate of 0·4 per 1,000. Among the 10 deaths from all causes for Dun Laoghaire was one from diphtheria; and the 9 deaths for Limerick included one from measles.

**City of Dublin.**—The number of births registered during the week was 235—118 boys and 117 girls. Exclusive of those, numbering 25, occurring in institutions of infants whose mothers were admitted from other localities, the number was 210, representing a rate of 25·5 per 1,000.

The number of deaths registered was 144—71 males and 73 females. Of the total, 26 related to persons belonging to other localities, so that the actual number of deaths for the city was 118, representing a rate of 14·3 per 1,000.

There were 2 deaths from measles registered last week. In the three preceding weeks deaths from measles were 0, 2 and one.

Tuberculous disease caused 16 deaths (13 of which were from pulmonary tuberculosis, and 3 from tuberculous meningitis), as against 10, 21 and 21 from all forms of tuberculosis in the three preceding weeks.

Seven deaths were caused by cancer, and 17 by diseases of the heart.

There were 16 deaths from pneumonia, comprising 10 from broncho-pneumonia, 3 from lobar pneumonia, and 3 from pneumonia (not otherwise defined). Bronchitis caused 13 deaths.

One accidental death was registered.

Among the deaths of infants under one year of age, one was due to measles, one to tuberculous meningitis, one to convulsions, one to bronchitis, 2 to pneumonia, 8 to premature birth, one to injury at birth, 3 to congenital malformation, and 4 to congenital debility.

Twenty-seven of the deaths recorded for the City during the week were those of children under 5 years of age, 23 being infants under one year, 14 of whom were under one month old, and 37 were those of persons aged 65 years and upwards, of whom 23 were aged 70 years or over.

Of the 118 deaths recorded, 67 occurred in hospitals or other public institutions.

**CASES OF INFECTIOUS DISEASES.**—Table III. shows the numbers notified in the City of Dublin, and in the Boroughs; and Table IV., the number of cases of certain diseases treated in Dublin Hospitals.

**Northern Ireland and Great Britain.**—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 12·2 per 1,000 of the population, and for Londonderry 15·0.

In the 121 County Boroughs and Great Towns of England and Wales (including London, in which the rate was 10·3) the mortality was 11·1 per 1,000 of the estimated resident population.

The average death-rate for 16 principal towns of Scotland was 11·7 per 1,000 persons living, the rate for Glasgow being 11·6 and for Edinburgh 12·1.

\* See note at foot of fourth page.

†Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE II.—Deaths registered during the week ended **Saturday, 18th May, 1935**, for the City of Dublin and the County Borough of Cork\* by Registrars' Districts, with the mortality per 1,000 of the population from all causes and from the PRINCIPAL EPIDEMIC DISEASES.

NOTE.—For the purpose of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births, by the exclusion of those taking place in each urban area belonging to other localities but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2, Cork Rural No. 1 and No. 2, and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths of residents of the Boroughs occurring in the Registrars' Districts above named are included, as in the case of births. In addition, the deaths in Institutions situated in Registrars' Districts embracing the twelve towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions for Saorstát Éireann will be made in the Detailed Annual Report.

**PRINCIPAL TOWNS**

Particulars of the Births and Deaths\* recorded for the **Twelve Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Twelve Principal Towns, 15·1 and 15·7; City of Dublin, 14·3 and 15·6; Borough of Dun Laoghaire, 14·5 and 15·2; Cork, 14·6 and 15·1; Limerick, 14·5 and 15·9; and Waterford, 29·4 and 25·5.

The deaths from the principal epidemic diseases† recorded for the twelve principal towns last week were represented by an annual rate of 0·8 per 1,000. Among the 11 deaths from all causes for Limerick were 2 from measles.

**City of Dublin.**—The number of births registered during the week was 297—156 boys and 141 girls. Exclusive of those, numbering 43, occurring in institutions of infants whose mothers were admitted from other localities, the number was 254, representing a rate of 30·9 per 1,000.

The number of deaths registered was 129—64 males and 65 females. Of the total, 13 related to persons belonging to other localities, and the deaths of 2 persons belonging to the City were registered in adjoining districts\*, so that the actual number of deaths for the City was 118, representing a rate of 14·3 per 1,000.

There were 6 deaths from the principal epidemic diseases, comprising 3 from measles one from diphtheria and 2 from diarrhoea and enteritis of children under 2 years. In the three preceding weeks deaths from measles were 2, one and 2; deaths from diphtheria were 0, one, and 0, and deaths from diarrhoea and enteritis were one, 0 and 0. Five deaths from influenza were registered.

Tuberculous disease caused 21 deaths (14 of which were from pulmonary tuberculosis, 4 from tuberculous meningitis, and 3 from other forms of tuberculous disease) as against 21, 21 and 16 from all forms of tuberculosis in the three preceding weeks.

Nine deaths were caused by cancer, and 15 by diseases of the heart.

There were 17 deaths from pneumonia, comprising 10 from broncho-pneumonia, one from lobar pneumonia, and 6 from pneumonia (not otherwise defined). Bronchitis caused 10 deaths.

Three deaths from violence were registered, one of which was due to drowning and 2 to injuries caused by motor vehicles.

Among the deaths of infants under one year of age, one was due to measles, one to tuberculous meningitis, one to convulsions, 3 to pneumonia, 2 to diarrhoea, one to premature birth, 2 to congenital malformation, and one to congenital debility.

Twenty-two of the deaths recorded for the City during the week were those of children under 5 years of age, 15 being infants under one year, 4 of whom were under one month old, and 35 were those of persons aged 65 years and upwards, of whom 25 were aged 70 years or over.

Of the 118 deaths recorded, 74 occurred in hospitals or other public institutions.

**CASES OF INFECTIOUS DISEASES.**—Table III. shows the numbers notified in the City of Dublin, and in the Boroughs; and Table IV., the number of cases of certain diseases treated in Dublin Hospitals.

**Northern Ireland and Great Britain.**—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 16·1 per 1,000 of the population, and for Londonderry 12·7.

In the 121 County Boroughs and Great Towns of England and Wales (including London, in which the rate was 11·2) the mortality was 11·9 per 1,000 of the estimated resident population.

The average death-rate for 16 principal towns of Scotland was 12·8 per 1,000 persons living, the rate for Glasgow being 13·3 and for Edinburgh 11·4.

\* See note at foot of fourth page.

†Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 25th May, 1935, for the Twelve Principal Towns of Saorstát Éireann and BELFAST 13  
and LONDONDERRY County Boroughs, with the METEOROLOGY for the week; also similar particulars for LONDON, EDINBURGH, and GLASGOW.

(a) See note at foot of fourth page. (b) According to the Census of 1926, but in the cases of the City of Dublin, and the Borough of Dún Laoghaire, the populations given are those estimated to the middle of 1935, while the estimate shown for London relates to the resident population in 1933. The populations for Glasgow and Edinburgh are those estimated provisionally to the middle of 1935. (c) Observations at Ordnance Survey Office, Phoenix Park. (d) Observations by Sir John Moore, taken at Fitzwilliam Square (Sunshine returned by Trinity College). (e) Botanic Gardens, Glasnevin. (f) Markree. (g) Typhoid Fever.

TABLE III.—Cases of Infectious Diseases notified in the undermentioned Urban areas during the week ended Saturday, 25th May, 1935, and during each of the three preceding weeks. A dash (—) denotes that the disease in question is not notifiable in the district.

| AREAS               | Week ended | Typhoid Fever | Typhus, Pyrexia and Small-pox | Measles | Scarlet Fever | Whooping-cough | Diphtheria (including Membranous Group) | Erysipelas | Puerperal Fever | Diarrhoeal Diseases | Dysentery & Malaria | Ophthalmia Neonatorum | Acute Primary Pneumonia and Acute Influenzal Pneumonia | Cerebro-spinal Fever | Acute Poliomyelitis and Encephalitis Lethargica | Varicella | Tuberculosis | Total |

NOTE.—For the purpose of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births, by the exclusion of those taking place in each urban area belonging to other localities but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2, Cork Rural No. 1 and No. 2, and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths of residents of the Boroughs occurring in the Registrars' Districts above named are included, as in the case of births. In addition, the deaths in Institutions situated in Registrars' Districts embracing the twelve towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions for Saorstát Éireann will be made in the Detailed Annual Report.

### PRINCIPAL TOWNS

Particulars of the Births and Deaths\* recorded for the **Twelve Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Twelve Principal Towns, 15.2 and 15.7; City of Dublin, 13.9 and 15.3; Borough of Dun Laoghaire, 14.5 and 15.2; Cork, 22.6 and 17.1; Limerick, 22.5 and 18.2; and Waterford, 17.6 and 23.0.

The deaths from the principal epidemic diseases† recorded for the twelve principal towns last week were represented by an annual rate of 1.1 per 1,000. Among the 34 deaths from all causes for Cork were one from measles and 2 from diarrhoea and enteritis of children under 2 years of age: the 17 deaths for Limerick included 5 from measles and one from diarrhoea and enteritis of a child under 2 years of age; and one of the 9 deaths for Waterford was from diphtheria.

**City of Dublin.**—The number of births registered during the week was 273—132 boys and 141 girls. Exclusive of those, numbering 32, occurring in institutions of infants whose mothers were admitted from other localities, the number was 241, representing a rate of 29.3 per 1,000.

The number of deaths registered was 127—62 males and 65 females. Of the total, 14 related to persons belonging to other localities, and the death of one person belonging to the City was registered in an adjoining district\*, so that the actual number of deaths for the City was 114, representing a rate of 13.9 per 1,000.

There were 3 deaths from the principal epidemic diseases, comprising one from whooping-cough and two from diphtheria. In the three preceding weeks there were no deaths from whooping-cough and deaths from diphtheria were one, 0 and one.

Tuberculous disease caused 15 deaths (11 of which were from pulmonary tuberculosis, 3 from tuberculous meningitis, and one from miliary tuberculosis) as against 21, 16 and 21 from all forms of tuberculosis in the three preceding weeks.

Five deaths were caused by cancer, and 15 by diseases of the heart.

There were 10 deaths from pneumonia, comprising 6 from broncho-pneumonia, 3 from lobar pneumonia, and one from pneumonia (not otherwise defined). Brouchitis caused 9 deaths.

Three accidental deaths were registered, two of which were due to burns and one to injuries caused by a motor vehicle.

Among the deaths of infants under one year of age, one was due to tuberculous meningitis, 2 to convulsions, one to pneumonia, 6 to premature birth, one to congenital malformation, and one to congenital debility.

Twenty-four of the deaths recorded for the City during the week were those of children under 5 years of age, 16 being infants under one year, 9 of whom were under one month old, and 34 were those of persons aged 65 years and upwards, of whom 25 were aged 70 years or over.

Of the 114 deaths recorded, 56 occurred in hospitals or other public institutions.

**CASES OF INFECTIOUS DISEASES.**—Table III. shows the numbers notified in the City of Dublin, and in the Boroughs; and Table IV., the number of cases of certain diseases treated in Dublin Hospitals.

**Northern Ireland and Great Britain.**—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 13.9 per 1,000 of the population, and for Londonderry 19.6.

In the 121 County Boroughs and Great Towns of England and Wales (including London, in which the rate was 10.9) the mortality was 11.2 per 1,000 of the estimated resident population.

The average death-rate for 16 principal towns of Scotland was 13.0 per 1,000 persons living, the rate for Glasgow being 13.8 and for Edinburgh 13.4.

\* See note at foot of fourth page.

†Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended **Saturday, 1st June, 1935**, for the **Twelve Principal Towns of Saorstát Éireann** and BELFAST and LONDONDERRY County Boroughs, with the METEOROLOGY for the week; also similar particulars for LONDON, EDINBURGH, and GLASGOW.

| PRINCIPAL TOWNS | POPULATION (b) | Annual Rate per 1,000 persons represented by |      | BIRTHS                             |     | DEATHS                      |     |     |     |     |      | (a) See note at foot of fourth page. (b) According to the Census of 1926, but in the cases of the City of Dublin, and the Borough of Dun Laoghaire, the populations given are those estimated to the middle of 1935, while the estimate shown for London relates to the resident population in 1933. The populations for Glasgow and Edinburgh are those estimated provisionally to the middle of 1935. (c) Observations at Ordnance Survey Office, Phoenix Park. (d) Observations by Sir John Moore, taken at Fitzwilliam Square (Sunshine returned by Trinity College). (e) Botanic Gardens, Glasnevin. (f) Marker.

TABLE II.—Deaths registered during the week ended **Saturday, 1st June, 1935**, for the City of Dublin and the County Borough of Cork\* by Registrars' Districts, with the mortality per 1,000 of the population from all causes and from the PRINCIPAL EPIDEMIC DISEASES.

NOTE.—For the purpose of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births, by the exclusion of those taking place in each urban area belonging to other localities but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2, Cork Rural No. 1 and No. 2, and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths of residents of the Boroughs occurring in the Registrars' Districts above named are included, as in the case of births. In addition, the deaths in Institutions situated in Registrars' Districts embracing the twelve towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions for Saorstát Éireann will be made in the Detailed Annual Report.

*Baile Átha Cliath.*

### PRINCIPAL TOWNS

Particulars of the Births and Deaths\* recorded for the **Twelve Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Twelve Principal Towns, 15.4 and 15.0; City of Dublin, 15.8 and 14.6; Borough of Dun Laoghaire, 7.3 and 12.7; Cork, 19.9 and 18.1; Limerick, 7.9 and 14.2; and Waterford, 13.7 and 19.6.

The deaths from the principal epidemic diseases† recorded for the twelve principal towns last week were represented by an annual rate of 0.7 per 1,000.

**City of Dublin.**—The number of births registered during the week was 264—136 boys and 128 girls. Exclusive of those, numbering 32, occurring in institutions of infants whose mothers were admitted from other localities, the number was 232, representing a rate of 28.2 per 1,000.

The number of deaths registered was 143—79 males and 64 females. Of the total, 26 related to persons belonging to other localities, and the deaths of 13 persons belonging to the City were registered in an adjoining district\*, so that the actual number of deaths for the City was 130, representing a rate of 15.8 per 1,000.

There were 8 deaths from the principal epidemic diseases, comprising 4 from measles, one from whooping-cough, one from diphtheria and 2 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from measles were 2, 3 and 0; from whooping-cough 0, 0 and one; from diphtheria 0, one and 2, and from diarrhoea and enteritis of children under 2 years of age 0, 2 and 0.

Tuberculous disease caused 23 deaths (16 of which were from pulmonary tuberculosis, 3 from tuberculous meningitis, and 4 from other forms of tuberculosis) as against 16, 21 and 15 from all forms of tuberculosis in the three preceding weeks.

Eleven deaths were caused by cancer, and 15 by diseases of the heart.

There were 11 deaths from pneumonia, comprising 6 from broncho-pneumonia, and 5 from pneumonia (not otherwise defined). Bronchitis caused 6 deaths.

Seven violent deaths were registered, one of which was by suicide.

Among the deaths of infants under one year of age, one was due to tuberculosis, one to convulsions, 2 to bronchitis, 2 to pneumonia, 11 to premature birth, 2 to congenital malformation, and 3, to congenital debility.

Forty of the deaths recorded for the City during the week were those of children under 5 years of age, 31 being infants under one year, 17 of whom were under one month old, and 26 were those of persons aged 65 years and upwards, of whom 20 were aged 70 years or over.

Of the 130 deaths recorded, 76 occurred in hospitals or other public institutions.

**CASES OF INFECTIOUS DISEASES.**—Table III. shows the numbers notified in the City of Dublin, and in the Boroughs; and Table IV., the number of cases of certain diseases treated in Dublin Hospitals.

**Northern Ireland and Great Britain.**—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 14.6 per 1,000 of the population, and for Londonderry 25.4.

In the 121 County Boroughs and Great Towns of England and Wales (including London, in which the rate was 10.1) the mortality was 11.3 per 1,000 of the estimated resident population.

The average death-rate for 16 principal towns of Scotland was 12.6 per 1,000 persons living, the rate for Glasgow being 12.7 and for Edinburgh 12.0.

\* See note at foot of fourth page.

†Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 8th June, 1935, for the Twelve Principal Towns of Saorstát Éireann and BELFAST and LONDONDERRY County Boroughs, with the METEOROLOGY for the week; also similar particulars for LONDON, EDINBURGH, and GLASGOW.

(a) See note at foot of fourth page. (b) In the cases of the City of Dublin, and the Borough of Dún Laoghaire, the populations given are those estimated to the middle of 1935, while the estimate shown for London relates to the resident population in 1933. The populations for Glasgow and Edinburgh are those estimated provisionally to the middle of 1935. (c) Observations at Ordnance Survey Office, Phoenix Park. (d) Observations by Sir John Moore, taken at Fitzwilliam Square (Sunshine returned by Trinity College). (e) Botanic Gardens, Glasnevin. (f) Marine.

TABLE II.—Deaths registered during the week ended Saturday, 8th June, 1935, for the City of Dublin and the County Borough of Cork\* by Registrars' Districts, with the mortality per 1,000 of the population from all causes and from the PRINCIPAL EPIDEMIC DISEASES.

[illegible]

(\*) See note at foot of fourth page. (†) The populations given for the Co. Borough of Cork and its component parts are those according to the Census of 1926.

TABLE III.—Cases of Infectious Diseases notified in the undermentioned Urban areas during the week ended **Saturday, 8th June, 1935**, and during each of the three preceding weeks. A dash (—) denotes that the disease in question is not notifiable in the district.

| AREAS               | Week ended | Typhoid Fever | Typhus, Pyrexia and Small-pox | Measles | Scarlet Fever | Whooping-cough | Diphtheria (including Membranous Croup) | Erysipelas | Puerperal Fever | Diarrhoeal Diseases | Dysentery & Malaria | Ophthalmia Neonatorum | Acute Primary Pneumonia and Acute Influenza Pneumonia | Cerebro-spinal Fever | Acute Poliomyelitis and Encephalitis Lethargica | Varicella | Tuberculosis | Total |

NOTE.—For the purpose of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births, by the exclusion of those taking place in each urban area belonging to other localities but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2, Cork Rural No. 1 and No. 2, and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths of residents of the Boroughs occurring in the Registrars' Districts above named are included, as in the case of births. In addition, the deaths in Institutions situated in Registrars' Districts embracing the twelve towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions for Saorstát Éireann will be made in the Detailed Annual Report.

**PRINCIPAL TOWNS**

Particulars of the Births and Deaths\* recorded for the Twelve Principal Towns are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Twelve Principal Towns, 12·5 and 14·6; City of Dublin, 12·6 and 14·2; Borough of Dun Laoghaire, 11·6 and 12·0; Cork, 14·0 and 17·8; Limerick, 14·5 and 14·9; and Waterford 11·7 and 18·1.

The deaths from the principal epidemic diseases† recorded for the twelve principal towns last week were represented by an annual rate of 1·1 per 1,000. Among the 21 deaths from all causes for Cork were 2 from diarrhoea and enteritis of children under 2 years and the 11 deaths for Limerick included 3 from measles.

**City of Dublin.**—The number of births registered during the week was 290—134 boys and 156 girls. Exclusive of those, numbering 46, occurring in institutions of infants whose mothers were admitted from other localities, the number was 244, representing a rate of 29·7 per 1,000.

The number of deaths registered was 123—65 males and 58 females. Of the total, 23 related to persons belonging to other localities, and the deaths of 4 persons belonging to the City were registered in adjoining districts\*, so that the actual number of deaths for the City was 104, representing a rate of 12·6 per 1,000.

There were 9 deaths from the principal epidemic diseases, comprising one from scarlet fever, 2 from diphtheria and 6 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks there were no deaths from scarlet fever; deaths from diphtheria were one, 2 and one; and from diarrhoea and enteritis of children under 2 years of age 2, 0 and 2.

Tuberculous disease caused 13 deaths (10 of which were from pulmonary tuberculosis, 2 from tuberculous meningitis, and one from tuberculous peritonitis) as against 21, 15 and 23 from all forms of tuberculosis in the three preceding weeks.

Twelve deaths were caused by cancer, and 10 by diseases of the heart.

There were 9 deaths from pneumonia, comprising 7 from broncho-pneumonia, and 2 from pneumonia (not otherwise defined). Bronchitis caused 6 deaths.

Four accidental deaths were registered, all of which were due to injuries caused by motor vehicles.

Among the deaths of infants under one year of age, one was due to scarlet fever, one to tuberculosis, 2 to meningitis, 4 to pneumonia, 5 to diarrhoea and enteritis, one to premature birth, and one to congenital debility.

Twenty-five of the deaths recorded for the City during the week were those of children under 5 years of age, 17 being infants under one year, 2 of whom were under one month old, and 23 were those of persons aged 65 years and upwards, of whom 18 were aged 70 years or over.

Of the 104 deaths recorded, 59 occurred in hospitals or other public institutions.

**CASES OF INFECTIOUS DISEASES.**—Table III. shows the numbers notified in the City of Dublin, and in the Boroughs; and Table IV., the number of cases of certain diseases treated in Dublin Hospitals.

**Northern Ireland and Great Britain.**—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 13·2 per 1,000 of the population, and for Londonderry 10·4.

In the 121 County Boroughs and Great Towns of England and Wales (including London, in which the rate was 9·4) the mortality was 10·0 per 1,000 of the estimated resident population.

The average death-rate for 16 principal towns of Scotland was 12·0 per 1,000 persons living, the rate for Glasgow being 12·4 and for Edinburgh 11·4.

\* See note at foot of fourth page.

†Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

**TABLE II.**—Deaths registered during the week ended **Saturday, 15th June, 1935**, for the City of Dublin and the County Borough of Cork\* by Registrars' Districts, with the mortality per 1,000 of the population from all causes and from the PRINCIPAL EPIDEMIC DISEASES.

NOTE.—For the purpose of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births, by the exclusion of those taking place in each urban area belonging to other localities but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2, Cork Rural No. 1 and No. 2, and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths of residents of the Boroughs occurring in the Registrars' Districts above named are included, as in the case of births. In addition, the deaths in Institutions situated in Registrars' Districts embracing the twelve towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions for Saorstát Éireann will be made in the Detailed Annual Report.

### PRINCIPAL TOWNS

Particulars of the Births and Deaths\* recorded for the **Twelve Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Twelve Principal Towns, 14·4 and 14·4; City of Dublin, 13·9 and 14·1; Borough of Dun Laoghaire, 20·3 and 13·4; Cork, 15·9 and 18·1; Limerick, 11·9 and 14·2; and Waterford, 21·5 and 16·1.

The deaths from the principal epidemic diseases† recorded for the twelve principal towns last week were represented by an annual rate of 0·6 per 1,000. Among the 24 deaths from all causes for Cork was one from diphtheria and the 9 deaths for Limerick included one from measles.

**City of Dublin.**—The number of births registered during the week was 293—163 boys and 130 girls. Exclusive of those, numbering 37, occurring in institutions of infants whose mothers were admitted from other localities, the number was 256, representing a rate of 31·1 per 1,000.

The number of deaths registered was 137—68 males and 69 females. Of the total, 25 related to persons belonging to other localities, and the deaths of 2 persons belonging to the City were registered in an adjoining district\*, so that the actual number of deaths for the City was 114, representing a rate of 13·9 per 1,000.

There were 4 deaths from the principal epidemic diseases, comprising 2 from measles, one from scarlet fever, one from diphtheria. In the three preceding weeks deaths from measles were 0, 4 and 0; from scarlet fever 0, 0 and one, and from diphtheria 2, one and 2.

Tuberculous disease caused 9 deaths (5 of which were from pulmonary tuberculosis, one from tuberculous peritonitis, and 3 from other forms of tuberculosis) as against 15, 23 and 13 from all forms of tuberculosis in the three preceding weeks.

Nineteen deaths were caused by cancer, and 19 by diseases of the heart.

There were 8 deaths from pneumonia, comprising one from broncho-pneumonia, 2 from lobar pneumonia and 5 from pneumonia (not otherwise defined). Bronchitis caused 4 deaths.

Among the deaths of infants under one year of age, one was due to measles, one to convulsions, one to bronchitis, 2 to premature birth, and one to congenital debility.

Seventeen of the deaths recorded for the City during the week were those of children under 5 years of age, 11 being infants under one year, 4 of whom were under one month old, and 31 were those of persons aged 65 years and upwards, of whom 25 were aged 70 years or over.

Of the 114 deaths recorded, 58 occurred in hospitals or other public institutions.

**CASES OF INFECTIOUS DISEASES.**—Table III. shows the numbers notified in the City of Dublin, and in the Boroughs; and Table IV., the number of cases of certain diseases treated in Dublin Hospitals.

**Northern Ireland and Great Britain.**—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 13·4 per 1,000 of the population, and for Londonderry 24·2.

In the 121 County Boroughs and Great Towns of England and Wales (including London, in which the rate was 9·6) the mortality was 10·3 per 1,000 of the estimated resident population.

The average death-rate for 16 principal towns of Scotland was 11·5 per 1,000 persons living, the rate for Glasgow being 12·0 and for Edinburgh 11·3.

\* See note at foot of fourth page.

†Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrheal diseases.

TABLE II.—Deaths registered during the week ended **Saturday, 22nd June, 1935**, for the City of Dublin and the County Borough of Cork\* by Registrars' Districts, with the mortality per 1,000 of the population from all causes and from the PRINCIPAL EPIDEMIC DISEASES.

NOTE.—For the purpose of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births, by the exclusion of those taking place in each urban area belonging to other localities but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2, Cork Rural No. 1 and No. 2, and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths of residents of the Boroughs occurring in the Registrars' Districts above named are included, as in the case of births. In addition, the deaths in Institutions situated in Registrars' Districts embracing the twelve towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions for Saorstát Éireann will be made in the Detailed Annual Report.

### PRINCIPAL TOWNS

Particulars of the Births and Deaths\* recorded for the **Twelve Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Twelve Principal Towns, 11·5 and 13·5; City of Dublin, 11·4 and 13·4; Borough of Dun Laoghaire, 11·6 and 12·7; Cork, 13·3 and 15·8; Limerick, 7·9 and 10·6; and Waterford, 17·6 and 16·1.

The deaths from the principal epidemic diseases† recorded for the twelve principal towns last week were represented by an annual rate of 0·3 per 1,000. Among the 8 deaths from all causes for Dun Laoghaire was one from whooping-cough.

**City of Dublin.**—The number of births registered during the week was 254—129 boys and 125 girls. Exclusive of those, numbering 30, occurring in institutions of infants whose mothers were admitted from other localities, the number was 224, representing a rate of 27·2 per 1,000.

The number of deaths registered was 108—58 males and 50 females. Of the total, 16 related to persons belonging to other localities, and the deaths of 2 persons belonging to the City were registered in an adjoining district\*, so that the actual number of deaths for the City was 94, representing a rate of 11·4 per 1,000.

There were 2 deaths from the principal epidemic diseases, comprising one from typhoid fever and one from diphtheria. In the three preceding weeks there were no deaths from typhoid fever and deaths from diphtheria were one, 2 and one.

Tuberculous disease caused 17 deaths (13 of which were from pulmonary tuberculosis, one from tuberculous meningitis, and 3 from other forms of tuberculosis) as against 23, 13 and 9 from all forms of tuberculosis in the three preceding weeks.

Eleven deaths were caused by cancer, and 15 by diseases of the heart.

There were 10 deaths from pneumonia, comprising 7 from broncho-pneumonia, one from lobar pneumonia and 2 from pneumonia (not otherwise defined). Bronchitis caused 5 deaths.

Three accidental deaths were registered, one of which was due to injuries caused by a motor vehicle. There was also one death by homicide.

Among the deaths of infants under one year of age, 3 were due to pneumonia, and one to injury at birth.

Eleven of the deaths recorded for the City during the week were those of children under 5 years of age, 6 being infants under one year, 3 of whom were under one month old, and 32 were those of persons aged 65 years and upwards, of whom 20 were aged 70 years or over.

Of the 94 deaths recorded, 50 occurred in hospitals or other public institutions.

**CASES OF INFECTIOUS DISEASES.**—Table III. shows the numbers notified in the City of Dublin, and in the Boroughs; and Table IV., the number of cases of certain diseases treated in Dublin Hospitals.

**Northern Ireland and Great Britain.**—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 11·4 per 1,000 of the population, and for Londonderry 11·5.

In the 121 County Boroughs and Great Towns of England and Wales (including London, in which the rate was 10·7) the mortality was 10·7 per 1,000 of the estimated resident population.

The average death-rate for 16 principal towns of Scotland was 11·1 per 1,000 persons living, the rate for Glasgow being 11·9 and for Edinburgh 11·8.

\* See note at foot of fourth page.

† Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 23rd June, 1935, for the Twelve Principal Towns of Saorstát Éireann and BELFAST and LONDONDERRY County Boroughs, with the METEOROLOGY for the week; also similar particulars for LONDON, EDINBURGH, and GLASGOW.

(a) See note at foot of fourth page. (b) According to the Census of 1926, but in the cases of the City of Dublin, and the Borough of Dún Laoghaire, the populations given are those estimated to the middle of 1935, while the estimate shown for London relates to the resident population in 1934. The populations for Glasgow and Edinburgh are those estimated provisionally to the middle of 1935. (c) Observations at Ordnance Survey Office, Phoenix Park. (d) Observations by Sir John Moore, taken at Fitzwilliam Square, (Sunshine returned by Trinity College). (e) Botanic Gardens, Glasnevin. (f) Marine. (g) Typhoid Fever.

TABLE II.—Deaths registered during the week ended Saturday, 29th June, 1935, for the City of Dublin and the County Borough of Cork\* by Registrars' Districts, with the mortality per 1,000 of the population from all causes and from the PRINCIPAL EPIDEMIC DISEASES.

[illegible]

(\*) See note at foot of fourth page.

TABLE III.—Cases of Infectious Diseases notified in the undermentioned Urban areas during the week ended Saturday, 29th June, 1935, and during each of the three preceding weeks. A dash (—) denotes that the disease in question is not notifiable in the district.

| AREAS               | Week ended | Typhoid Fever | Typhus, Pyrexia and Small-pox | Measles | Scarlet Fever | Whooping-cough | Diphtheria (including Membranous Croup) | Erysipelas | Puerperal Fever | Diarrhoeal Diseases | Dysentery & Malaria | Ophthalmia Neonatorum | Acute Primary Pneumonia and Acute Influenza Pneumonia | Cerebro-spinal Fever | Acute Poliomyelitis and Encephalitis Lethargica | Varicella | Tuberculosis | Total |

NOTE.—For the purpose of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births, by the exclusion of those taking place in each urban area belonging to other localities but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2, Cork Rural No. 1 and No. 2, and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths of residents of the Boroughs occurring in the Registrars' Districts above named are included, as in the case of births. In addition, the deaths in Institutions situated in Registrars' Districts embracing the twelve towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions for Saorstát Éireann will be made in the Detailed Annual Report.

### PRINCIPAL TOWNS

Particulars of the Births and Deaths\* recorded for the **Twelve Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population :—

Twelve Principal Towns, 12·1 and 12·6; City of Dublin, 12·0 and 12·5; Borough of Dun Laoghaire, 13·1 and 14·2; Cork, 12·0 and 13·8; Limerick, 18·5 and 13·2; and Waterford, 9·8 and 15·2.

The deaths from the principal epidemic diseases† recorded for the twelve principal towns last week were represented by an annual rate of 0·8 per 1,000. Among the 18 deaths from all causes for Cork was one from diphtheria and one from diarrhoea and enteritis of a child under 2 years of age. One of the 14 deaths for Limerick was from measles. Included in the 5 deaths for Waterford was one from diphtheria and one from diarrhoea and enteritis of a child under 2 years of age and one of the 2 deaths for Dundalk was from diphtheria.

**City of Dublin.**—The number of births registered during the week was 267—137 boys and 130 girls. Exclusive of those, numbering 30, occurring in institutions of infants whose mothers were admitted from other localities, the number was 237, representing a rate of 28·8 per 1,000.

The number of deaths registered was 112—63 males and 49 females. Of the total, 14 related to persons belonging to other localities, and the death of one person belonging to the City was registered in an adjoining district\*, so that the actual number of deaths for the City was 99 representing a rate of 12·0 per 1,000.

There were 4 deaths from the principal epidemic diseases, comprising one from measles and 3 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from measles were 0, 2 and 0, and deaths from diarrhoea and enteritis of children under 2 years were 6, 0 and 0.

Two deaths from cerebro-spinal fever were registered during the week.

Tuberculous disease caused 14 deaths (12 of which were from pulmonary tuberculosis, one from tuberculous meningitis, and one from tuberculous of shoulder) as against 13, 9 and 17 from all forms of tuberculosis in the three preceding weeks.

Seven deaths were caused by cancer, and 19 by diseases of the heart.

There were 3 deaths from pneumonia, comprising one from broncho-pneumonia, and 2 from pneumonia (not otherwise defined). Bronchitis caused 11 deaths.

Three deaths from violence were registered, one of which was due to injuries caused by a horse-drawn vehicle and one to scalds.

Among the deaths of infants under one year of age, 2 were due to cerebro-spinal fever, one to convulsions, 3 to diarrhoea and enteritis, one to congenital malformation, 3 to congenital debility and one to premature birth.

Seventeen of the deaths recorded for the City during the week were those of children under 5 years of age, 13 being infants under one year, 7 of whom were under one month old, and 37 were those of persons aged 65 years and upwards, of whom 26 were aged 70 years or over.

Of the 99 deaths recorded, 55 occurred in hospitals or other public institutions.

**CASES OF INFECTIOUS DISEASES.**—Table III. shows the numbers notified in the City of Dublin, and in the Boroughs; and Table IV., the number of cases of certain diseases treated in Dublin Hospitals.

**Northern Ireland and Great Britain.**—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 9·9 per 1,000 of the population, and for Londonderry 12·7.

In the 121 County Boroughs and Great Towns of England and Wales (including London, in which the rate was 9·4) the mortality was 9·4 per 1,000 of the estimated resident population.

The average death-rate for 16 principal towns of Scotland was 11·2 per 1,000 persons living, the rate for Glasgow being 10·6 and for Edinburgh 11·4.

\* See note at foot of fourth page.

†Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoea diseases.

TABLE II.—Deaths registered during the week ended Saturday, 6th July, 1935, for the City of Dublin and the County Borough of Cork\* by Registrars' Districts, with the mortality per 1,000 of the population from all causes and from the PRINCIPAL EPIDEMIC DISEASES.

NOTE.—For the purpose of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births, by the exclusion of those taking place in each urban area belonging to other localities but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2, Cork Rural No. 1 and No. 2, and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths of residents of the Boroughs occurring in the Registrars' Districts above named are included, as in the case of births. In addition, the deaths in Institutions situated in Registrars' Districts embracing the twelve towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions for Saorstát Éireann will be made in the Detailed Annual Report.

### PRINCIPAL TOWNS

Particulars of the Births and Deaths\* recorded for the **Twelve Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Twelve Principal Towns, 12·4 and 12·6; City of Dublin, 12·9 and 12·6; Borough of Dun Laoghaire, 7·3 and 13·1; Cork, 12·0 and 13·3; Limerick, 9·3 and 11·9; and Waterford, 13·7 and 15·7.

The deaths from the principal epidemic diseases ‡ recorded for the twelve principal towns last week were represented by an annual rate of 0·8 per 1,000. Included in the 7 deaths for Waterford were 2 from diarrhoea and enteritis of children under 2 years of age and one of the 3 deaths for Dundalk was from diphtheria.

**City of Dublin.**—The number of births registered during the week was 231—124 boys and 107 girls. Exclusive of those, numbering 41, occurring in institutions of infants whose mothers were admitted from other localities, the number was 190, representing a rate of 23·1 per 1,000.

The number of deaths registered was 124—57 males and 67 females. Of the total, 21 related to persons belonging to other localities, and the deaths of 3 persons belonging to the City were registered in adjoining districts\*, so that the actual number of deaths for the City was 116 representing a rate of 12·9 per 1,000.

There were 6 deaths from the principal epidemic diseases, comprising one from scarlet fever, one from whooping-cough, 3 from diphtheria and one from diarrhoea and enteritis of a child under 2 years of age. In the three preceding weeks deaths from scarlet fever were one, 0, and 0, deaths from diphtheria were one, one, and 0, and deaths from diarrhoea and enteritis of children under 2 years were 0, 0 and 3. There were no deaths from whooping-cough in the three preceding weeks.

One death from cerebro-spinal fever was registered during the week.

Tuberculous disease caused 18 deaths (13 of which were from pulmonary tuberculosis, 4 from tuberculous meningitis, and one from tuberculous peritonitis) as against 9, 17 and 14 from all forms of tuberculosis in the three preceding weeks.

Eleven deaths were caused by cancer, and 13 by diseases of the heart.

There were 3 deaths from pneumonia, comprising 2 from broncho-pneumonia, and one from lobar pneumonia. Bronchitis caused 3 deaths.

Seven deaths from violence were registered, one of which was due to injuries caused by a motor-lorry, one to drowning and two to suicide.

Among the deaths of infants under one year of age, one was due to meningitis, one to diarrhoea and enteritis, one to congenital malformation, 2 to congenital debility, 6 to premature birth and one to injury at birth.

Twenty-six of the deaths recorded for the City during the week were those of children under 5 years of age, 18 being infants under one year, 12 of whom were under one month old, and 25 were those of persons aged 65 years and upwards, of whom 19 were aged 70 years or over.

Of the 106 deaths recorded, 67 occurred in hospitals or other public institutions.

**CASES OF INFECTIOUS DISEASES.**—Table III. shows the numbers notified in the City of Dublin, and in the Boroughs; and Table IV., the number of cases of certain diseases treated in Dublin Hospitals.

**Northern Ireland and Great Britain.**—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 11·3 per 1,000 of the population, and for Londonderry 11·5.

In the 121 County Boroughs and Great Towns of England and Wales (including London, in which the rate was 9·4) the mortality was 9·4 per 1,000 of the estimated resident population.

The average death-rate for 16 principal towns of Scotland was 10·1 per 1,000 persons living, the rate for Glasgow being 10·0 and for Edinburgh 11·1.

\* See note at foot of fourth page.

‡Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 13th July, 1936, for the Twelve Principal Towns of Saorstát Éireann and BELFAST and LONDONDERRY County Boroughs, with the METEOROLOGY for the week; also similar particulars for LONDON, EDINBURGH, and GLASGOW.

(a) See note at foot of fourth page. (b) According to the Census of 1926, but in the cases of the City of Dublin, and the Borough of Dún Laoghaire, the populations given are those estimated to the middle of 1935, while the estimate shown for London relates to the resident population in 1934. The populations for Glasgow and Edinburgh are those estimated provisionally to the middle of 1935. (c) Observations at Ordnance Survey Office, Phoenix Park. (d) Observations by Sir John Moore, taken at Fitzwilliam Square, (Sunshine returned by Trinity College). (e) Botanic Gardens, Glasnevin. (f) Marine. (g) Typhoid Fever.

TABLE II.—Deaths registered during the week ended Saturday, 13th July, 1935, for the City of Dublin and the County Borough of Cork\* by Registrars' Districts, with the mortality per 1,000 of the population from all causes and from the PRINCIPAL EPIDEMIC DISEASES.

NOTE.—For the purpose of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births, by the exclusion of those taking place in each urban area belonging to other localities but the figures shown for Dún Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2, Cork Rural No. 1 and No. 2, and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths of residents of the Boroughs occurring in the Registrars' Districts above named are included, as in the case of births. In addition, the deaths in Institutions situated in Registrars' Districts embracing the twelve towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions for Saorstát Éireann will be made in the Detailed Annual Report.

### PRINCIPAL TOWNS

Particulars of the Births and Deaths\* recorded for the **Twelve Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Twelve Principal Towns, 11.3 and 11.8; City of Dublin, 10.6 and 11.7; Borough of Dun Laoghaire, 7.3 and 9.8; Cork, 12.6 and 12.5; Limerick, 14.5 and 12.6; and Waterford, 15.7 and 14.2.

The deaths from the principal epidemic diseases † recorded for the twelve principal towns last week were represented by an annual rate of 0.5 per 1,000.

**City of Dublin.**—The number of births registered during the week was 251—138 boys and 113 girls. Exclusive of those, numbering 39, occurring in institutions of infants whose mothers were admitted from other localities, the number was 212, representing a rate of 25.8 per 1,000.

The number of deaths registered was 108—52 males and 56 females. Of the total, 22 related to persons belonging to other localities, and the death of one person belonging to the City was registered in an adjoining district\*, so that the actual number of deaths for the City was 87 representing a rate of 10.6 per 1,000.

There were 4 deaths from the principal epidemic diseases, comprising one from diphtheria and 3 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from diphtheria were one, 0 and 3, and deaths from diarrhoea and enteritis of children under 2 years were 0, 3 and one.

One death from cerebro-spinal fever was registered during the week.

Tuberculous disease caused 10 deaths (all of which were from pulmonary tuberculosis, as against 17, 14 and 18 from all forms of tuberculosis in the three preceding weeks.

Eleven deaths were caused by cancer, and 18 by diseases of the heart.

There were 6 deaths from pneumonia, comprising 5 from broncho-pneumonia, and one from pneumonia not otherwise defined. Bronchitis caused 7 deaths.

Among the deaths of infants under one year of age, one was due to bronchitis, 2 to broncho-pneumonia, 3 to diarrhoea and enteritis, one to congenital malformation, 3 to congenital debility and 3 to premature birth.

Eighteen of the deaths recorded for the City during the week were those of children under 5 years of age, 16 being infants under one year, 4 of whom were under one month old, and 27 were those of persons aged 65 years and upwards, of whom 18 were aged 70 years or over.

Of the 87 deaths recorded, 43 occurred in hospitals or other public institutions.

**CASES OF INFECTIOUS DISEASES.**—Table III. shows the numbers notified in the City of Dublin, and in the Boroughs; and Table IV., the number of cases of certain diseases treated in Dublin Hospitals.

**Northern Ireland and Great Britain.**—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 10.6 per 1,000 of the population, and for Londonderry 10.4.

In the 121 County Boroughs and Great Towns of England and Wales (including London, in which the rate was 9.5) the mortality was 9.3 per 1,000 of the estimated resident population.

The average death-rate for 16 principal towns of Scotland was 11.6 per 1,000 persons living, the rate for Glasgow being 11.1 and for Edinburgh 11.4.

\* See note at foot of fourth page.

†Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 20th July, 1935, for the Twelve Principal Towns of Saorstát Éireann and Belfast and LONDONDERRY County Boroughs, with the METEOROLOGY for the week; also similar particulars for LONDON, EDINBURGH, and GLASGOW.

NOTE.—For the purpose of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births, by the exclusion of those taking place in each urban area belonging to other localities but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2, Cork Rural No. 1 and No. 2, and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths of residents of the Boroughs occurring in the Registrars' Districts above named are included, as in the case of births. In addition, the deaths in Institutions situated in Registrars' Districts embracing the twelve towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions for Saorstát Éireann will be made in the Detailed Annual Report.

## PRINCIPAL TOWNS

Particulars of the Births and Deaths\* recorded for the **Twelve Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Twelve Principal Towns, 11·6 and 11·9; City of Dublin, 13·3 and 12·2; Borough of Dun Laoghaire, 7·3 and 8·8; Cork, 10·0 and 11·7; Limerick, 9·3 and 12·9; and Waterford, 2·0 and 10·3.

The deaths from the principal epidemic diseases† recorded for the twelve principal towns last week were represented by an annual rate of 1·1 per 1,000. Two of the 15 deaths for Cork and two of the 7 deaths for Limerick were from diarrhoea and enteritis of children under 2 years of age. One of the 3 deaths for Sligo was from scarlet fever.

**City of Dublin.**—The number of births registered during the week was 258—155 boys and 103 girls. Exclusive of those numbering 36, occurring in institutions of infants whose mothers were admitted from other localities, the number was 222, representing a rate of 27·0 per 1,000.

The number of deaths registered was 128—66 males and 62 females. Of the total, 20 related to persons belonging to other localities, and the death of one person belonging to the City was registered in an adjoining district\*, so that the actual number of deaths for the City was 109, representing a rate of 13·3 per 1,000.

There were 8 deaths from the principal epidemic diseases, comprising one from diphtheria and 7 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from diphtheria were 0, 3 and one, and deaths from diarrhoea and enteritis of children under 2 years were 3, one and 3.

Tuberculous disease caused 16 deaths (13 of which were from pulmonary tuberculosis and 3 from other forms of tuberculous disease), as against 14, 18 and 10 from all forms of tuberculosis in the three preceding weeks.

Eleven deaths were caused by cancer, and 17 by diseases of the heart.

There were 2 deaths from pneumonia (not otherwise defined) registered during the week. Bronchitis caused 6 deaths.

One death was due to injuries caused by a motor vehicle.

Among the deaths of infants under one year of age, one was due to convulsions, one to pneumonia, 5 to diarrhoea and enteritis, 2 to congenital malformation, 5 to congenital debility and one to premature birth.

Twenty-one of the deaths recorded for the City during the week were those of children under 5 years of age, 17 being infants under one year, 5 of whom were under one month old, and 30 were those of persons aged 65 years and upwards, of whom 27 were aged 70 years or over.

Of the 109 deaths recorded, 56 occurred in hospitals or other public institutions.

**CASES OF INFECTIOUS DISEASES.**—Table III. shows the numbers notified in the City of Dublin, and in the Boroughs; and Table IV., the number of cases of certain diseases treated in Dublin Hospitals.

**Northern Ireland and Great Britain.**—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 15·1 per 1,000 of the population, and for Londonderry 13·9.

In the 121 County Boroughs and Great Towns of England and Wales (including London, in which the rate was 8·9) the mortality was 9·3 per 1,000 of the estimated resident population.

The average death-rate for 16 principal towns of Scotland was 10·2 per 1,000 persons living, the rate for Glasgow being 9·6 and for Edinburgh 9·6.

\* See note at foot of fourth page.

† Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 27th July, 1935, for the Twelve Principal Towns of Saorstát Éireann and BELFAST and LONDONDERRY County Boroughs, with the METEOROLOGY for the week; also similar particulars for LONDON, EDINBURGH, and GLASGOW.

(a) See note at foot of fourth page. (b) According to the Census of 1926, but in the cases of the City of Dublin, and the Borough of Dun Laoghaire, the populations given are those estimated to the middle of 1935, while the estimate shown for London relates to the resident population in 1934. The populations for Glasgow and Edinburgh are those estimated provisionally to the middle of 1935. (c) Observations at Ordnance Survey Office, Phoenix Park. (d) Observations by Sir John Moore, taken at Fitzwilliam Square, (Sunshine returned by Trinity College). (e) Botanic Gardens, Glasnevin. (f) Mactree.

TABLE II.—Deaths registered during the week ended **Saturday, 27th July, 1935**, for the City of Dublin and the County Borough of Cork\* by Registrars' Districts, with the mortality per 1,000 of the population from all causes and from the PRINCIPAL EPIDEMIC DISEASES.

NOTE.—For the purpose of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births, by the exclusion of those taking place in each urban area belonging to other localities but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2, Cork Rural No. 1 and No. 2, and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths of residents of the Boroughs occurring in the Registrars' Districts above named are included, as in the case of births. In addition, the deaths in Institutions situated in Registrars' Districts embracing the twelve towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions for Saorstát Éireann will be made in the Detailed Annual Report.

**PRINCIPAL TOWNS**

Particulars of the Births and Deaths\* recorded for the **Twelve Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population :—

Twelve Principal Towns, 12·0 and 11·8; City of Dublin, 13·0 and 12·5; Borough of Dun Laoghaire, 7·3 and 7·3; Cork, 10·6 and 11·3; Limerick, 13·2 and 11·6; and Waterford, 15·7 and 11·8.

The deaths from the principal epidemic diseases† recorded for the twelve principal towns last week were represented by an annual rate of 0·8 per 1,000. Among the 10 deaths from all causes for Limerick were one from measles and one from diarrhoea and enteritis of a child under two years of age. The 8 deaths for Waterford include one from dysentery and one from diarrhoea and enteritis of a child under two years of age.

**City of Dublin.**—The number of births registered during the week was 263—115 boys and 148 girls. Exclusive of those numbering 31, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 232, representing a rate of 28·2 per 1,000.

The number of deaths registered was 123—57 males and 66 females. Of the total, 19 related to persons belonging to other localities, and the deaths of 3 persons belonging to the City were registered in an adjoining district\*, so that the actual number of deaths for the City was 107, representing a rate of 13·0 per 1,000.

There were 7 deaths from diarrhoea and enteritis of children under 2 years of age registered during the week. In the three preceding weeks deaths from diarrhoea and enteritis of children under 2 years were one, 3 and 7.

There was one death from cerebro-spinal fever registered during the week.

Tuberculous disease caused 13 deaths (10 of which were from pulmonary tuberculosis, 2 from tuberculous meningitis, and one from tuberculous peritonitis), as against 18, 10 and 16 from all forms of tuberculosis in the three preceding weeks.

Nine deaths were caused by cancer, and 11 by diseases of the heart.

There were 8 deaths from pneumonia, comprising 4 from broncho-pneumonia, one from lobar pneumonia, and 3 from pneumonia (not otherwise defined). Bronchitis caused 2 deaths.

One death was due to injuries caused by a motor vehicle.

Among the deaths of infants under one year of age, 3 were due to convulsions, 4 to pneumonia, 6 to diarrhoea and enteritis, 2 to congenital malformation, 4 to congenital debility, 6 to premature birth, and 2 to injury at birth.

Thirty-seven of the deaths recorded for the City during the week were those of children under 5 years of age, 34 being infants under one year, 15 of whom were under one month old, and 30 were those of persons aged 65 years and upwards, of whom 21 were aged 70 years or over.

Of the 107 deaths recorded, 76 occurred in hospitals or other public institutions.

**CASES OF INFECTIOUS DISEASES.**—Table III. shows the numbers notified in the City of Dublin, and in the Boroughs; and Table IV., the number of cases of certain diseases treated in Dublin Hospitals.

**Northern Ireland and Great Britain.**—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 9·9 per 1,000 of the population and for Londonderry 26·6.

In the 121 County Boroughs and Great Towns of England and Wales (including London, in which the rate was 8·7) the mortality was 8·9 per 1,000 of the estimated resident population.

The average death-rate for 16 principal towns of Scotland was 10·3 per 1,000 persons living, the rate for Glasgow being 10·2 and for Edinburgh 11·0.

\* See note at foot of fourth page.

† Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoea disease.

TABLE 1.—BIRTHS and DEATHS registered (a) during the week ended **Saturday 3rd August, 1935**, for the **Twelve Principal Towns of Saorstát Éireann and BELFAST** and LONDONDERRY County Boroughs, with the METEOROLOGY for the week; also similar particulars for LONDON, EDINBURGH, and GLASGOW.

NOTE.—For the purpose of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births, by the exclusion of those taking place in each urban area belonging to other localities but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2, Cork Rural No. 1 and No. 2, and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths of residents of the Boroughs occurring in the Registrars' Districts above named are included, as in the case of births. In addition, the deaths in Institutions situated in Registrars' Districts embracing the twelve towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions for Saorstát Éireann will be made in the Detailed Annual Report.

THE GOVERNMENT PUBLICATIONS SALE OFFICE, 5 NASSAU STREET, DUBLIN.

No. 32. VOL. LXXII.]

WEEK ENDED SATURDAY, 10th August, 1935.

[PRICE 1d. NET

*Oifig an Ard-Chláradóra,*

*Baile Átha Cliath.*

### PRINCIPAL TOWNS

Particulars of the Births and Deaths\* recorded for the **Twelve Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Twelve Principal Towns, 10·4 and 11·3; City of Dublin, 10·6 and 11·9; Borough of Dun Laoghaire, 7·3 and 7·3; Cork, 13·3 and 11·6; Limerick, 7·9 and 11·2; and Waterford, 7·8 and 10·3.

The deaths from the principal epidemic diseases† recorded for the twelve principal towns last week were represented by an annual rate of 1·4 per 1,000. Among the 3 deaths from all causes for Kilkenny were 2 from diarrhoea and enteritis of children under two years of age.

**City of Dublin.**—The number of births registered during the week was 264—138 boys and 126 girls. Exclusive of those numbering 46, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 218, representing a rate of 26·5 per 1,000.

The number of deaths registered was 106—51 males and 55 females. Of the total, 20 related to persons belonging to other localities, and the death of one person belonging to the City was registered in an adjoining district\*, so that the actual number of deaths for the City was 87, representing a rate of 10·6 per 1,000.

There were 15 deaths from the principal epidemic diseases, comprising one from diphtheria and 14 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from diphtheria were one, one and 0, and from diarrhoea and enteritis of children under 2 years were 3, 7 and 7.

There was one death from cerebro-spinal fever registered during the week.

Tuberculous disease caused 11 deaths (10 of which were from pulmonary tuberculosis, and one from tuberculous meningitis) as against 10, 16 and 13 from all forms of tuberculosis in the three preceding weeks.

Nine deaths were caused by cancer, and 10 by diseases of the heart.

There were 6 deaths from pneumonia, comprising 3 from broncho-pneumonia, 2 from lobar pneumonia, and one from pneumonia (not otherwise defined). Bronchitis caused 3 deaths.

Two accidental deaths were registered, one of which was due to burns and one to injuries caused by a motor vehicle.

Among the deaths of infants under one year of age, 2 were due to convulsions, one to pneumonia, 13 to diarrhoea and enteritis, and one to congenital debility.

Twenty-four of the deaths recorded for the City during the week were those of children under 5 years of age, 19 being infants under one year, 3 of whom were under one month old, and 28 were those of persons aged 65 years and upwards, of whom 18 were aged 70 years or over.

Of the 87 deaths recorded, 46 occurred in hospitals or other public institutions.

**CASES OF INFECTIOUS DISEASES.**—Table III. shows the numbers notified in the City of Dublin, and in the Boroughs; and Table IV., the number of cases of certain diseases treated in Dublin Hospitals.

**Northern Ireland and Great Britain.**—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 9·3 per 1,000 of the population and for Londonderry 9·2.

In the 121 County Boroughs and Great Towns of England and Wales (including London, in which the rate was 9·0) the mortality was 9·3 per 1,000 of the estimated resident population.

The average death-rate for 16 principal towns of Scotland was 10·7 per 1,000 persons living, the rate for Glasgow being 10·8 and for Edinburgh 11·4.

\* See note at foot of fourth page.

† Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE 1.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 10th August, 1935, for the Twelve Principal Towns of Saorstát Éireann and BELFAST and LONDONDERRY County Boroughs, with the METEOROLOGY for the week; also similar particulars for LONDON, EDINBURGH, and GLASGOW.

| PRINCIPAL TOWNS     | POPULATION (b) | Annual Rate per 1,000 persons represented by |      | BIRTHS                                      |     | DEATHS       |     | CAUSED BY                   |     |                |      |            |      |  |      |              |             |        |                             | METEOROLOGY                 |      |          |      |                        |                                    |                    |      |                  |      |                 |      |                  |          |                        |                    |                     |      |                    |      |                          |      |      |      |      |      |

(a) See note at foot of fourth page. (b) According to the Census of 1926, but in the cases of the City of Dublin, and the Borough of Dún Laoghaire, the populations given are those estimated to the middle of 1935, while the estimate shown for London relates to the resident population in 1934. The populations for Glasgow and Edinburgh are those estimated provisionally to the middle of 1935. (c) Observations at Ordnance Survey Office, Phoenix Park. (d) Observations by Sir John Moore, taken at Fitzwilliam Square, (Sunshine returned by Trinity College). (e) Botanic Gardens, Glasnevin. (f) Makree.

TABLE II.—Deaths registered during the week ended Saturday, 10th August, 1935, for the City of Dublin and the County Borough of Cork\* by Registrars' Districts, with the mortality per 1,000 of the population from all causes and from the PRINCIPAL EPIDEMIC DISEASES.

NOTE.—For the purpose of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births, by the exclusion of those taking place in each urban area belonging to other localities but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2, Cork Rural No. 1 and No. 2, and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths of residents of the Boroughs occurring in the Registrars' Districts above named are included, as in the case of births. In addition, the deaths in Institutions situated in Registrars' Districts embracing the twelve towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions for Saorstát Éireann will be made in the Detailed Annual Report.

PRINCIPAL TOWNS

Particulars of the Births and Deaths\* recorded for the **Twelve Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Twelve Principal Towns, 12·1 and 11·5; City of Dublin, 12·2 and 12·3; Borough of Dun Laoghaire, 10·2 and 8·0; Cork, 9·3 and 10·8; Limerick, 13·2 and 10·9; and Waterford, 15·7 and 10·3.

The deaths from the principal epidemic diseases† recorded for the twelve principal towns last week were represented by an annual rate of 1·7 per 1,000. Among the 14 deaths from all causes for Cork were 4 from diarrhoea and enteritis of children under two years of age; the 10 deaths for Limerick include one from diphtheria and one from diarrhoea and enteritis of a child under 2; one of the 2 deaths for Dundalk was from measles and the 6 deaths for Kilkenny include 2 from diarrhoea and enteritis of children under 2.

**City of Dublin.**—The number of births registered during the week was 252—125 boys and 127 girls. Exclusive of those numbering 27, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 225, representing a rate of 27·4 per 1,000.

The number of deaths registered was 110—58 males and 52 females. Of the total, 13 related to persons belonging to other localities, and the death of 3 persons, belonging to the City were registered in an adjoining district, so that the actual number of deaths for the City was 100, representing a rate of 12·2 per 1,000.

There were 12 deaths from the principal epidemic diseases, comprising one from whooping-cough and 11 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks there were no deaths from whooping-cough and deaths from diarrhoea and enteritis of children under 2 years were 7, 7 and 14.

Tuberculous disease caused 10 deaths (8 of which were from pulmonary tuberculosis, and 2 from other forms of tuberculous disease) as against 16, 13 and 11 from all forms of tuberculosis in the three preceding weeks.

Ten deaths were caused by cancer, and 15 by diseases of the heart.

There were 7 deaths from pneumonia, comprising 2 from broncho-pneumonia, one from lobar pneumonia, and 4 from pneumonia (not otherwise defined). Bronchitis caused one death.

Six accidental deaths were registered, 2 of which were due to drowning and 2 to injuries caused by motor vehicles.

Among the deaths of infants under one year of age, 3 were due to pneumonia, 9 to diarrhoea and enteritis, one to congenital malformation, 4 to congenital debility, and one to premature birth.

Twenty-seven of the deaths recorded for the City during the week were those of children under 5 years of age, 19 being infants under one year, 2 of whom were under one month old, and 26 were those of persons aged 65 years and upwards, of whom 21 were aged 70 years or over.

Of the 100 deaths recorded, 51 occurred in hospitals or other public institutions.

**CASES OF INFECTIOUS DISEASES.**—Table III. shows the numbers notified in the City of Dublin, and in the Boroughs; and Table IV., the number of cases of certain diseases treated in Dublin Hospitals.

**Northern Ireland and Great Britain.**—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 13·8 per 1,000 of the population and for Londonderry 11·5.

In the 121 County Boroughs and Great Towns of England and Wales (including London, in which the rate was 8·9) the mortality was 9·0 per 1,000 of the estimated resident population.

The average death-rate for 16 principal towns of Scotland was 9·9 per 1,000 persons living, the rate for Glasgow being 10·0 and for Edinburgh 9·5.

\* See note at foot of fourth page.

† Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE 1.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 17th August, 1885, for the Twelve Principal Towns of *Éire* and Belfast and LONDONDERRY County Boroughs, with the METEOROLOGY for the week; also similar particulars for LONDON, EDINBURGH, and GLASGOW.

| PRINCIPAL TOWNS | POPULATION (b) | Annual Rate per 1,000 persons re- presented by |     | BIRTHS          |     | DEATHS                             |     | From all Causes     |     | From Principal Epi- demic Diseases |      | TOTAL DEATHS                |      | Under 1 year of Age         |      | 65 years and upwards |      | CAUSED BY      |      |   |      |   |      |               |      |               |      | Air Temperature                              |      | Hours of Bright Sunshine                     |      |                |      |                |      | NOTE.—For the purpose of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births, by the exclusion of those taking place in each urban area belonging to other localities but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2, Cork Rural No. 1 and No. 2, and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths of residents of the Boroughs occurring in the Registrars' Districts above named are included, as in the case of births. In addition, the deaths in Institutions situated in Registrars' Districts embracing the twelve towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions for Saorstát Éireann will be made in the Detailed Annual Report.

**PRINCIPAL TOWNS**

Particulars of the Births and Deaths\* recorded for the **Twelve Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population :—

Twelve Principal Towns, 12·1 and 11·7; City of Dublin, 10·8 and 11·7; Borough of Dun Laoghaire, 23·2 and 12·0; Cork, 10·0 and 10·8; Limerick, 17·2 and 12·9; and Waterford, 19·6 and 14·7.

The deaths from the principal epidemic diseases† recorded for the twelve principal towns last week were represented by an annual rate of 1·4 per 1,000. Three of the 13 deaths for Limerick and 2 of the 10 deaths for Waterford were from diarrhoea and enteritis of children under 2 years of age.

**City of Dublin.**—The number of births registered during the week was 292—157 boys and 135 girls. Exclusive of those numbering 39, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 253, representing a rate of 30·8 per 1,000.

The number of deaths registered was 109—57 males and 52 females. Of the total, 22 related to persons belonging to other localities, and the deaths of 2 persons, belonging to the City were registered in adjoining districts, so that the actual number of deaths for the City was 89, representing a rate of 10·8 per 1,000.

There were 11 deaths from diarrhoea and enteritis of children under 2 years of age registered during the week. In the three preceding weeks deaths from diarrhoea and enteritis of children under 2 years were 7, 14 and 11.

Tuberculous disease caused 9 deaths (8 of which were from pulmonary tuberculosis and one from tuberculous meningitis) as against 13, 11 and 10 from all forms of tuberculosis in the three preceding weeks.

Eleven deaths were caused by cancer, and 14 by diseases of the heart.

There were 9 deaths from pneumonia, comprising 7 from broncho-pneumonia, one from lobar pneumonia, and one from pneumonia (not otherwise defined). Bronchitis caused 4 deaths.

Two accidental deaths were registered, both of which were due to burns.

Among the deaths of infants under one year of age, one was due to tuberculosis, one to convulsions, 4 to pneumonia, and 10 to diarrhoea and enteritis.

Twenty-five of the deaths recorded for the City during the week were those of children under 5 years of age, 19 being infants under one year, 3 of whom were under one month old, and 27 were those of persons aged 65 years and upwards, of whom 21 were aged 70 years or over.

Of the 89 deaths recorded, 42 occurred in hospitals or other public institutions.

**CASES OF INFECTIOUS DISEASES.**—Table III. shows the numbers notified in the City of Dublin, and in the Boroughs; and Table IV., the number of cases of certain diseases treated in Dublin Hospitals.

**Northern Ireland and Great Britain.**—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 11·7 per 1,000 of the population and for Londonderry 5·8.

In the 121 County Boroughs and Great Towns of England and Wales (including London, in which the rate was 9·7) the mortality was 9·6 per 1,000 of the estimated resident population.

The average death-rate for 16 principal towns of Scotland was 10·0 per 1,000 persons living, the rate for Glasgow being 9·7 and for Edinburgh 11·2.

\* See note at foot of fourth page.

† Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 24th August, 1935, for the Twelve Principal Towns of Saorstát Éireann and BELFAST and LONDONDERRY County Boroughs, with the METEOROLOGY for the week; also similar particulars for LONDON, EDINBURGH, and GLASGOW.

| PRINCIPAL TOWNS | POPULATION (b) | BIRTHS                                      |                 |                                  |                                  | NOTE.—For the purpose of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births, by the exclusion of those taking place in each urban area belonging to other localities but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2, Cork Rural No. 1 and No. 2, and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths of residents of the Boroughs occurring in the Registrars' Districts above named are included, as in the case of births. In addition, the deaths in Institutions situated in Registrars' Districts embracing the twelve towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions for Saorstát Éireann will be made in the Detailed Annual Report.

**PRINCIPAL TOWNS**

Particulars of the Births and Deaths\* recorded for the **Twelve Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Twelve Principal Towns, 14·4 and 12·3; City of Dublin, 14·6 and 12·1; Borough of Dun Laoghaire, 17·4 and 14·5; Cork, 14·0 and 11·7; Limerick, 17·2 and 13·9; and Waterford, 7·8 and 12·7.

The deaths from the principal epidemic diseases† recorded for the twelve principal towns last week were represented by an annual rate of 2·1 per 1,000. Three of the 21 deaths for Cork, 4 of the 13 deaths for Limerick and the 2 deaths for Kilkenny were from diarrhoea and enteritis of children under 2 years of age.

**City of Dublin.**—The number of births registered during the week was 248—134 boys and 114 girls. Exclusive of those numbering 39, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 209, representing a rate of 25·4 per 1,000.

The number of deaths registered was 135—75 males and 60 females. Of the total, 21 related to persons belonging to other localities, and the deaths of 6 persons belonging to the City were registered in other districts, so that the actual number of deaths for the City was 120, representing a rate of 14·6 per 1,000.

There were 18 deaths from the principal epidemic diseases, comprising one from diphtheria and 17 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from diphtheria were one, 0 and 0, and from diarrhoea and enteritis of children under 2 years were 14, 11 and 11.

Tuberculous disease caused 3 deaths (all of which were from pulmonary tuberculosis) as against 11, 10 and 9 from all forms of tuberculosis in the three preceding weeks.

Fourteen deaths were caused by cancer, and 19 by diseases of the heart.

There were 7 deaths from pneumonia, comprising 4 from broncho-pneumonia, one from lobar pneumonia, and 2 from pneumonia (not otherwise defined). Bronchitis caused 5 deaths.

Five accidental deaths were registered, 2 of which were due to drowning and one to injuries caused by a motor vehicle.

Among the deaths of infants under one year of age, one was due to convulsions, one to bronchitis, 2 to pneumonia, 16 to diarrhoea and enteritis, 2 to congenital malformation, 3 to congenital debility, 5 to premature birth and 5 to injury at birth.

Forty-two of the deaths recorded for the City during the week were those of children under 5 years of age, 39 being infants under one year, 16 of whom were under one month old, and 33 were those of persons aged 65 years and upwards, of whom 29 were aged 70 years or over.

Of the 120 deaths recorded, 74 occurred in hospitals or other public institutions.

**CASES OF INFECTIOUS DISEASES.**—Table III. shows the numbers notified in the City of Dublin, and in the Boroughs; and Table IV., the number of cases of certain diseases treated in Dublin Hospitals.

**Northern Ireland and Great Britain.**—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 11·4 per 1,000 of the population and for Londonderry 16·2.

In the 121 County Boroughs and Great Towns of England and Wales (including London, in which the rate was 8·6) the mortality was 8·8 per 1,000 of the estimated resident population.

The average death-rate for 16 principal towns of Scotland was 10·7 per 1,000 persons living, the rate for Glasgow being 10·6 and for Edinburgh 10·2.

\* See note at foot of fourth page.

† Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE 1.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 31st August, 1935, for the Twelve Principal Towns of Siorráit Éireann and BELFAST and LONDONDERRY County Boroughs, with the METEOROLOGY for the week; also similar particulars for LONDON, EDINBURGH, and GLASGOW.

| PRINCIPAL TOWNS     | POPULATION (b) | Annual Rate per 1,000 persons registered by presented by | BIRTHS   |                                    | DEATHS       |                     |                      |                             |               |                |            |  |           |                | METEOROLOGY |           |       |                 |          |                        |                    |                  |                 |                  |                  |  |  |                                     |                                  |      |      |      |   |

(a) See note at foot of fourth page. (b) According to the Census of 1926, but in the cases of the City of Dublin, and the Borough of Dún Laoghaire, the populations given are those estimated to the middle of 1935, while the estimate shown for London relates to the resident population in 1934. The populations for Glasgow and Edinburgh are those estimated provisionally to the middle of 1935. (c) Observations at Ordnance Survey Office, Phoenix Park. (d) Observations by Sir John Moore, taken at Fitzwilliam Square, (Shakespeare returned by Trinity College). (e) Botanic Gardens, Glasnevin. (f) Markree. (g) Typhoid Fever.

TABLE II.—Deaths registered during the week ended Saturday, 31st August, 1935, for the City of Dublin and the County Borough of Cork\* by Registrars' Districts, with the mortality per 1,000 of the population from all causes and from the PRINCIPAL EPIDEMIC DISEASES.

NOTE.—For the purpose of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births, by the exclusion of those taking place in each urban area belonging to other localities but the figures shown for Dún Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2, Cork Rural No. 1 and No. 2, and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths of residents of the Boroughs occurring in the Registrars' Districts above named are included, as in the case of births. In addition, the deaths in Institutions situated in Registrars' Districts embracing the twelve towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions for Saorstát Éireann will be made in the Detailed Annual Report.

**PRINCIPAL TOWNS**

Particulars of the Births and Deaths\* recorded for the **Twelve Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Twelve Principal Towns, 13·1 and 12·9; City of Dublin, 12·8 and 12·6; Borough of Dun Laoghaire, 18·9 and 17·4; Cork, 13·3 and 11·7; Limerick, 19·8 and 16·9; and Waterford, 15·7 and 14·7.

The deaths from the principal epidemic diseases† recorded for the twelve principal towns last week were represented by an annual rate of 1·3 per 1,000. Three of the 20 deaths for Cork and 2 of the 15 deaths for Limerick were from diarrhoea and enteritis of children under 2 years of age.

**City of Dublin.**—The number of births registered during the week was 285—140 boys and 145 girls. Exclusive of those numbering 38, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 247, representing a rate of 30·0 per 1,000.

The number of deaths registered was 113—56 males and 57 females. Of the total, 10 related to persons belonging to other localities, and the deaths of 2 persons belonging to the City were registered in adjoining districts, so that the actual number of deaths for the City was 105, representing a rate of 12·8 per 1,000.

There were 10 deaths from the principal epidemic diseases, comprising one from scarlet fever, 2 from diphtheria and 7 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks there were no deaths from scarlet fever and deaths from diphtheria were 0, 0 and one, and from diarrhoea and enteritis of children under 2 years 11, 11 and 17.

Tuberculous disease caused 13 deaths (8 of which were from pulmonary tuberculosis, one from tuberculous meningitis and 4 from other forms of tuberculous disease) as against 10, 9 and 3 from all forms of tuberculosis in the three preceding weeks.

Thirteen deaths were caused by cancer, and 14 by diseases of the heart.

There were 4 deaths from pneumonia, comprising 3 from broncho-pneumonia and one from lobar pneumonia. Bronchitis caused 3 deaths.

Five accidental deaths were registered, 2 of which were due to drowning and one to injuries caused by a motor vehicle.

Among the deaths of infants under one year of age, one was due to tuberculosis, 3 to pneumonia, 7 to diarrhoea and enteritis, 3 to congenital malformation, and 4 to premature birth.

Twenty-seven of the deaths recorded for the City during the week were those of children under 5 years of age, 21 being infants under one year, 8 of whom were under one month old, and 25 were those of persons aged 65 years and upwards, of whom 13 were aged 70 years or over.

Of the 105 deaths recorded, 66 occurred in hospitals or other public institutions.

**CASES OF INFECTIOUS DISEASES.**—Table III. shows the numbers notified in the City of Dublin, and in the Boroughs; and Table IV., the number of cases of certain diseases treated in Dublin Hospitals.

**Northern Ireland and Great Britain.**—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 12·1 per 1,000 of the population and for Londonderry 20·8.

In the 121 County Boroughs and Great Towns of England and Wales (including London, in which the rate was 8·1) the mortality was 8·8 per 1,000 of the estimated resident population.

The average death-rate for 16 principal towns of Scotland was 9·7 per 1,000 persons living, the rate for Glasgow being 8·6 and for Edinburgh 9·8.

\* See note at foot of fourth page.

† Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE 1.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 7th September, 1935, for the Twelve Principal Towns of Saorstát Éireann and BELFAST and LONDONDERRY County Boroughs, with the METEOROLOGY for the week; also similar particulars for LONDON, EDINBURGH, and GLASGOW.

| PRINCIPAL TOWNS | COLS. | POPULATION (b) | Annual Rate per 1,000 persons registered by |  | BIRTHS |  | TOTAL DEATHS    |  |                                    |  | See note at foot of fourth page. (b) According to the Census of 1926, but in the cases of Dún Laoghaire, the Borough of Dún Laoghaire, the populations given are those estimated to the middle of 1935, while the estimate shown for London relates to the resident population in 1934. The populations for Glasgow and Edinburgh are those estimated provisionally to the middle of 1935. (c) Observations at Ordnance Survey Office, Phoenix Park. (d) Observations by Sir John Moore, taken at Fitzwilliam Square, Sunshire returned by Trinity College. (e) Botanic Garden, Glasnevin. (f) Markree. (g) Typhoid Fever.

TABLE II.—Deaths registered during the week ended Saturday, 7th September 1935, for the City of Dublin and the County Borough of Cork\* by Registrar's Districts, with the mortality per 1,000 of the population from all causes and from the principal epidemic diseases.

NOTE.—For the purpose of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births, by the exclusion of those taking place in each urban area belonging to other localities but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2, Cork Rural No. 1 and No. 2, and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths of residents of the Boroughs occurring in the Registrars' Districts above named are included, as in the case of births. In addition, the deaths in Institutions situated in Registrars' Districts embracing the twelve towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions for Saorstát Éireann will be made in the Detailed Annual Report.

PRINCIPAL TOWNS

Particulars of the Births and Deaths\* recorded for the **Twelve Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Twelve Principal Towns, 11·3 and 12·7; City of Dublin, 10·8 and 12·3; Borough of Dun Laoghaire, 5·8 and 16·3; Cork, 14·6 and 13·0; Limerick, 14·5 and 17·2; and Waterford, 9·8 and 13·2.

The deaths from the principal epidemic diseases† recorded for the twelve principal towns last week were represented by an annual rate of 1·6 per 1,000. Among the 4 deaths for Dun Laoghaire were one from scarlet fever and one from diarrhoea and enteritis of a child under 2 years of age; and 3 of the eleven deaths for Limerick were from diarrhoea and enteritis of children under 2 years.

**City of Dublin.**—The number of births registered during the week was 276—138 boys and 138 girls. Exclusive of those numbering 48, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 228, representing a rate of 27·7 per 1,000.

The number of deaths registered was 107—59 males and 48 females. Of the total, 18 related to persons belonging to other localities, so that the actual number of deaths for the City was 89, representing a rate of 10·8 per 1,000.

There were 14 deaths from the principal epidemic diseases, comprising one from typhoid fever, 2 from scarlet fever, one from diphtheria and 10 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks there were no deaths from typhoid fever; and deaths from scarlet fever were 0, 0 and one, from diphtheria 0, one and 2, and from diarrhoea and enteritis of children under 2 years 11, 17 and 7.

Tuberculous disease caused 11 deaths (9 of which were from pulmonary tuberculosis, and 2 from other forms of tuberculous disease) as against 9, 3 and 13 from all forms of tuberculosis in the three preceding weeks.

Ten deaths were caused by cancer, and 18 by diseases of the heart.

There were 4 deaths from pneumonia, comprising one from broncho-pneumonia, one from lobar pneumonia and 2 from pneumonia (not otherwise defined). Bronchitis caused 3 deaths.

One accidental death was registered, due to injuries caused by a train. There were 2 deaths by suicide.

Among the deaths of infants under one year of age, one was due to tuberculosis, 2 to pneumonia, 10 to diarrhoea and enteritis, and one to congenital debility.

Nineteen of the deaths recorded for the City during the week were those of children under 5 years of age, 15 being infants under one year, 2 of whom were under one month old, and 26 were those of persons aged 65 years and upwards, of whom 19 were aged 70 years or over.

Of the 89 deaths recorded, 41 occurred in hospitals or other public institutions.

**CASES OF INFECTIOUS DISEASES.**—Table III. shows the numbers notified in the City of Dublin, and in the Boroughs; and Table IV., the number of cases of certain diseases treated in Dublin Hospitals.

**Northern Ireland and Great Britain.**—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 13·1 per 1,000 of the population and for Londonderry 11·5.

In the 121 County Boroughs and Great Towns of England and Wales (including London, in which the rate was 8·7) the mortality was 9·4 per 1,000 of the estimated resident population.

The average death-rate for 16 principal towns of Scotland was 11·8 per 1,000 persons living, the rate for Glasgow being 13·0 and for Edinburgh 9·6.

\* See note at foot of fourth page.

† Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE 1.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 14th September, 1935, for the Twelve Principal Towns of Saorstát Éireann and BELFAST and LONDONDERRY County Boroughs, with the METEOROLOGY for the week; also similar particulars for LONDON, EDINBURGH, and GLASGOW.

(a) See note at foot of fourth page. (b) According to the Census of 1926, but in the cases of the City of Dublin, and the Borough of Dún Laoghaire, the populations given are those estimated to the middle of 1935, while the estimate shown for London relates to the resident population in 1934. The populations for Glasgow and Edinburgh are those estimated provisionally to the middle of 1935. (c) Observations at Ordnance Survey Office, Phoenix Park. (d) Observations by Sir John Moore, taken at Fitzwilliam Square, (Sunshine returned by Trinity College). (e) Botanic Gardens, Glasnevin. (f) Markec. (g) Typhoid Fever.

NOTE.—For the purpose of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births, by the exclusion of those taking place in each urban area belonging to other localities but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2, Cork Rural No. 1 and No. 2, and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths of residents of the Boroughs occurring in the Registrars' Districts above named are included, as in the case of births. In addition, the deaths in Institutions situated in Registrars' Districts embracing the twelve towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions for Saorstát Éireann will be made in the Detailed Annual Report.

PRINCIPAL TOWNS

Particulars of the Births and Deaths\* recorded for the **Twelve Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Twelve Principal Towns, 12·7 and 12·9; City of Dublin, 12·3 and 12·6; Borough of Dun Laoghaire, 16·0 and 14·5; Cork, 11·3 and 13·3; Limerick, 11·9 and 15·9; and Waterford, 15·7 and 12·3.

The deaths from the principal epidemic diseases† recorded for the twelve principal towns last week were represented by an annual rate of 1·7 per 1,000. Four of the 17 deaths for Cork, 3 of the 9 deaths for Limerick and 3 of the 8 deaths for Waterford were from diarrhoea and enteritis of children under 2 years of age.

**City of Dublin.**—The number of births registered during the week was 244—125 boys and 119 girls. Exclusive of those numbering 35, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 209, representing a rate of 25·4 per 1,000.

The number of deaths registered was 112—57 males and 55 females. Of the total, 18 related to persons belonging to other localities and the deaths of 7 persons belonging to the City were registered in adjoining districts, so that the actual number of deaths for the City was 101, representing a rate of 12·3 per 1,000.

There were 11 deaths from the principal epidemic diseases, comprising one from whooping-cough and 10 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks there were no deaths from whooping-cough; and deaths from diarrhoea and enteritis of children under 2 years were 17, 7 and 10.

Tuberculous disease caused 12 deaths (10 of which were from pulmonary tuberculosis, and 2 from other forms of tuberculous disease) as against 3, 13 and 11 from all forms of tuberculosis in the three preceding weeks.

Four deaths were caused by cancer, and 19 by diseases of the heart.

There were 6 deaths from pneumonia, comprising 3 from broncho-pneumonia, one from lobar pneumonia and 2 from pneumonia (not otherwise defined). Bronchitis caused 4 deaths.

Two accidental deaths were registered, one of which was due to injuries caused by a tramcar, and one by a motor vehicle.

Among the deaths of infants under one year of age, one was due to whooping-cough, one to tuberculosis, one to meningitis, one to convulsions, one to pneumonia, 10 to diarrhoea and enteritis, 2 to congenital malformation, 2 to congenital debility, 10 to premature birth and one to injury at birth.

Thirty-four of the deaths recorded for the City during the week were those of children under 5 years of age, 33 being infants under one year, 18 of whom were under one month old, and 26 were those of persons aged 65 years and upwards, of whom 18 were aged 70 years or over.

Of the 101 deaths recorded, 53 occurred in hospitals or other public institutions.

**CASES OF INFECTIOUS DISEASES.**—Table III. shows the numbers notified in the City of Dublin, and in the Boroughs; and Table IV., the number of cases of certain diseases treated in Dublin Hospitals.

**Northern Ireland and Great Britain.**—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 10·2 per 1,000 of the population and for Londonderry 13·9.

In the 121 County Boroughs and Great Towns of England and Wales (including London, in which the rate was 9·4) the mortality was 9·3 per 1,000 of the estimated resident population.

The average death-rate for 16 principal towns of Scotland was 11·0 per 1,000 persons living, the rate for Glasgow being 11·3 and for Edinburgh 11·5.

\* See note at foot of fourth page.

† Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE III.—Cases of Infectious Diseases notified in the undermentioned Urban areas during the week ended Saturday, 21st September, 1935, and during each of the three preceding weeks. A dash (—) denotes that the disease in question is not notifiable in the district.

NOTE.—For the purpose of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births, by the exclusion of those taking place in each urban area belonging to other localities but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2, Cork Rural No. 1 and No. 2, and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths of residents of the Boroughs occurring in the Registrars' Districts above named are included, as in the case of births. In addition, the deaths in Institutions situated in Registrars' Districts embracing the twelve towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions for Saorstát Éireann will be made in the Detailed Annual Report.

**PRINCIPAL TOWNS**

Particulars of the Births and Deaths\* recorded for the **Twelve Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population :—

Twelve Principal Towns, 10·9 and 12·0; City of Dublin, 10·5 and 11·6; Borough of Dun Laoghaire, 11·6 and 13·1; Cork, 15·3 and 13·6; Limerick, 10·6 and 14·2; and Waterford, 2·0 and 10·8.

The deaths from the principal epidemic diseases† recorded for the twelve principal towns last week were represented by an annual rate of 1·3 per 1,000. Two of the 8 deaths for Limerick and 2 of the 5 deaths for Galway were from diarrhoea and enteritis of children under 2 years of age. Included in the 2 deaths for Tralee was one from diphtheria.

**City of Dublin.**—The number of births registered during the week was 235—137 boys and 98 girls. Exclusive of those numbering 35, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 200, representing a rate of 24·3 per 1,000.

The number of deaths registered was 110—61 males and 49 females. Of the total, 24 related to persons belonging to other localities, so that the actual number of deaths for the City was 86, representing a rate of 10·5 per 1,000.

There were 10 deaths from the principal epidemic diseases, comprising 2 from diphtheria and 8 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from diphtheria were 2, one and 0, and from diarrhoea and enteritis of children under 2 years were 7, 10 and 10.

Tuberculous disease caused 8 deaths (6 of which were from pulmonary tuberculosis, and 2 from other forms of tuberculous disease) as against 13, 11 and 12 from all forms of tuberculosis in the three preceding weeks.

Seven deaths were caused by cancer, and 14 by diseases of the heart.

There were 8 deaths from pneumonia, comprising 5 from broncho-pneumonia and 3 from pneumonia (not otherwise defined). Bronchitis caused 4 deaths.

Six violent deaths were registered, one of which was due to burns, one to drowning, and one to injuries caused by a tramcar.

Among the deaths of infants under one year of age, one was due to pneumonia, 8 to diarrhoea and enteritis, 2 to congenital malformations, one to congenital debility, and one to premature birth.

Twenty-one of the deaths recorded for the City during the week were those of children under 5 years of age, 17 being infants under one year, 5 of whom were under one month old, and 23 were those of persons aged 65 years and upwards, of whom 21 were aged 70 years or over.

Of the 86 deaths recorded, 49 occurred in hospitals or other public institutions.

**CASES OF INFECTIOUS DISEASES.**—Table III. shows the numbers notified in the City of Dublin, and in the Boroughs; and Table IV., the number of cases of certain diseases treated in Dublin Hospitals.

**Northern Ireland and Great Britain.**—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 14·1 per 1,000 of the population and for Londonderry 16·2.

In the 121 County Boroughs and Great Towns of England and Wales (including London, in which the rate was 9·0) the mortality was 9·5 per 1,000 of the estimated resident population.

The average death-rate for 16 principal towns of Scotland was 11·2 per 1,000 persons living, the rate for Glasgow being 10·9 and for Edinburgh 12·0.

\* See note at foot of fourth page.

† Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE 1.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 28th September, 1935, for the Twelve Principal Towns of Saorstát Éireann and BELFAST and LONDONDERRY County Boroughs, with the METROPOLITAN for the week; also similar particulars for LONDON, EDINBURGH, and GLASGOW.

| PRINCIPAL TOWNS | POPULATION (b) | Annual Rate per 1,000 persons registered by presented by |      | BIRTHS          |                                  | DEATHS       |                     | (a) See note at foot of fourth page. (b) According to the Census of 1926, but in the cases of the City of Dublin, and the Borough of Dún Laoghaire, the populations given are those estimated to the middle of 1935, while the estimate shown for London relates to the resident population in 1934. The populations for Glasgow and Edinburgh are those estimated provisionally to the middle of 1935. (c) Observations at Ordnance Survey Office, Phoenix Park. (d) Observations by Sir John Moore, taken at Fitzwilliam Square, Sunbire returned by Trinity College. (e) Botanic Gardens, Glasnevin. (f) Markree. (g) Typhoid Fever.

TABLE II.—Deaths registered during the week ended Saturday, 28th September, 1935, for the City of Dublin and the County Borough of Cork\* by Registrars' Districts, with the mortality per 1,000 of the population from all causes and from the PRINCIPAL EPIDEMIC DISEASES.

NOTE.—For the purpose of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births, by the exclusion of those taking place in each urban area belonging to other localities but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2, Cork Rural No. 1 and No. 2, and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths of residents of the Boroughs occurring in the Registrars' Districts above named are included, as in the case of births. In addition, the deaths in Institutions situated in Registrars' Districts embracing the twelve towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions for Saorstát Éireann will be made in the Detailed Annual Report.

## PRINCIPAL TOWNS

Particulars of the Births and Deaths\* recorded for the **Twelve Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Twelve Principal Towns, 12·4 and 11·8; City of Dublin, 11·2 and 11·2; Borough of Dun Laoghaire, 18·9 and 13·1; Cork, 9·3 and 12·6; Limerick, 17·2 and 13·6; and Waterford, 15·7 and 10·8.

The deaths from the principal epidemic diseases† recorded for the twelve principal towns last week were represented by an annual rate of 0·9 per 1,000. Two of the 13 deaths for Limerick were from diarrhoea and enteritis of children under 2 years of age.

**City of Dublin.**—The number of births registered during the week was 236—130 boys and 106 girls. Exclusive of those numbering 29, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 207, representing a rate of 25·2 per 1,000.

The number of deaths registered was 109—58 males and 51 females. Of the total, 17 related to persons belonging to other localities, so that the actual number of deaths for the City was 92, representing a rate of 11·2 per 1,000.

There were 7 deaths from the principal epidemic diseases, comprising one from diphtheria and 6 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from diphtheria were one, 0 and 2, and from diarrhoea and enteritis of children under 2 years were 10, 10 and 8.

Tuberculous disease caused 8 deaths (5 of which were from pulmonary tuberculosis, 2 from tuberculous meningitis, and one from miliary tuberculosis) as against 11, 12 and 8 from all forms of tuberculosis in the three preceding weeks.

Four deaths were caused by cancer, and 20 by diseases of the heart.

There were 11 deaths from pneumonia, comprising 5 from broncho-pneumonia, one from lobar pneumonia and 5 from pneumonia (not otherwise defined). Bronchitis caused 3 deaths.

Three accidental deaths were registered, 2 of which were due to burns or scalds.

Among the deaths of infants under one year of age, 2 were due to tuberculosis, 5 to pneumonia, 6 to diarrhoea and enteritis, 5 to congenital debility, 8 to premature birth, and 2 to injury at birth.

Thirty-five of the deaths recorded for the City during the week were those of children, under 5 years of age, 31 being infants under one year, 14 of whom were under one month old and 25 were those of persons aged 65 years and upwards, of whom 19 were aged 70 years or over.

Of the 92 deaths recorded, 41 occurred in hospitals or other public institutions.

**CASES OF INFECTIOUS DISEASES.**—Table III. shows the numbers notified in the City of Dublin, and in the Boroughs; and Table IV., the number of cases of certain diseases treated in Dublin Hospitals.

**Northern Ireland and Great Britain.**—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 12·6 per 1,000 of the population and for Londonderry 15·0.

In the 121 County Boroughs and Great Towns of England and Wales (including London, in which the rate was 9·5) the mortality was 9·6 per 1,000 of the estimated resident population.

The average death-rate for 16 principal towns of Scotland was 11·3 per 1,000 persons living, the rate for Glasgow being 11·9 and for Edinburgh 12·7.

\* See note at foot of fourth page.

† Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE 1.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 5th October, 1935, for the Twelve Principal Towns of Saorstát Éireann and BELFAST and LONDONDERRY County Boroughs, with the METEOROLOGY for the week; also similar particulars for LONDON, EDINBURGH, and GLASGOW.

| PRINCIPAL TOWNS | POPULATION (b) | Annual Rate per 1,000 persons represented by |     | BIRTHS                             |     | DEATHS       |     | CAUSED BY           |     |                      |      |                             |      |      |      |      |      |      |              |      | DEATHS |      |                             |      |          |      |               |      | (a) See note at foot of fourth page. (b) According to the Census of 1926, but in the cases of the City of Dublin, and the Borough of Dún Laoghaire, the populations given are those estimated to the middle of 1935, while the estimate shown for London relates to the resident population in 1934. The populations for Glasgow and Edinburgh are those estimated provisionally to the middle of 1935. (c) Observations at Ordnance Survey Office, Phoenix Park. (d) Observations by Sir John Moore, taken at Fitzwilliam Square, (Sunshine returned by Trinity College). (e) Botanic Gardens, Glasnevin. (f) Markree. (g) Typhoid Fever.

TABLE II.—Deaths registered during the week ended Saturday, 5th October, 1935, for the City of Dublin and the County Borough of Cork\* by Registrars' Districts, with the mortality per 1,000 of the population from all causes and from the PRINCIPAL EPIDEMIC DISEASES.

NOTE.—For the purpose of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births, by the exclusion of those taking place in each urban area belonging to other localities but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2, Cork Rural No. 1 and No. 2, and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths of residents of the Boroughs occurring in the Registrars' Districts above named are included, as in the case of births. In addition, the deaths in Institutions situated in Registrars' Districts embracing the twelve towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions for Saorstát Éireann will be made in the Detailed Annual Report.

## PRINCIPAL TOWNS

Particulars of the Births and Deaths\* recorded for the **Twelve Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Twelve Principal Towns, 13·1 and 12·3; City of Dublin, 13·0 and 11·8; Borough of Dun Laoghaire, 8·7 and 13·8; Cork, 13·3 and 12·3; Limerick, 10·6 and 12·6; and Waterford, 17·6 and 12·8.

The deaths from the principal epidemic diseases† recorded for the twelve principal towns last week were represented by an annual rate of 0·8 per 1,000. Two of the 20 deaths for Cork were from diarrhoea and enteritis of children under 2 years of age, 2 of the 5 deaths for Drogheda were from diphtheria, and one of the 9 deaths for Waterford was from typhoid fever.

**City of Dublin.**—The number of births registered during the week was 279—135 boys and 144 girls. Exclusive of those numbering 47, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 232, representing a rate of 28·2 per 1,000.

The number of deaths registered was 131—75 males and 56 females. Of the total, 26 related to persons belonging to other localities, and the deaths of 2 persons belonging to the City were registered in adjoining districts,\* so that the actual number of deaths for the City was 107, representing a rate of 13·0 per 1,000.

There were 4 deaths from the principal epidemic diseases, comprising 2 from diphtheria and 2 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from diphtheria were 0, 2 and one, and deaths from diarrhoea and enteritis of children under 2 years were 10, 8 and 6.

Tuberculous disease caused 19 deaths (13 of which were from pulmonary tuberculosis, 5 from tuberculous meningitis, and one from tuberculous peritonitis) as against 12, 8 and 8 from all forms of tuberculosis in the three preceding weeks.

Eight deaths were caused by cancer, and 13 by diseases of the heart.

There were 13 deaths from pneumonia, comprising 7 from broncho-pneumonia, one from lobar pneumonia and 5 from pneumonia (not otherwise defined). Bronchitis caused 3 deaths.

Two accidental deaths were registered. There was also one death by suicide.

Among the deaths of infants under one year of age, one was due to tuberculosis, 2 to convulsions, 2 to pneumonia, 2 to diarrhoea and enteritis, 2 to congenital debility, and one to premature birth.

Nineteen of the deaths recorded for the City during the week were those of children under 5 years of age, 13 being infants under one year, 4 of whom were under one month old, and 31 were those of persons aged 65 years and upwards, of whom 25 were aged 70 years or over.

Of the 107 deaths recorded, 58 occurred in hospitals or other public institutions.

**CASES OF INFECTIOUS DISEASES.**—Table III. shows the numbers notified in the City of Dublin, and in the Boroughs; and Table IV., the number of cases of certain diseases treated in Dublin Hospitals.

**Northern Ireland and Great Britain.**—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 12·1 per 1,000 of the population and for Londonderry 16·2.

In the 121 County Boroughs and Great Towns of England and Wales (including London, in which the rate was 10·3) the mortality was 10·0 per 1,000 of the estimated resident population.

The average death-rate for 16 principal towns of Scotland was 11·0 per 1,000 persons living, the rate for Glasgow being 11·9 and for Edinburgh 11·5.

\* See note at foot of fourth page.

† Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE II.—Deaths registered during the week ended Saturday, 12th October, for the City of Dublin and the County Borough of Cork\* by Registrars' Districts, with the mortality per 1,000 of the population from all causes and from the Principal Epidemic Diseases.

NOTE.—For the purpose of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births, by the exclusion of those taking place in each urban area belonging to other localities but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2, Cork Rural No. 1 and No. 2, and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths of residents of the Boroughs occurring in the Registrars' Districts above named are included, as in the case of births. In addition, the deaths in Institutions situated in Registrars' Districts embracing the twelve towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions for Saorstát Éireann will be made in the Detailed Annual Report.

**PRINCIPAL TOWNS**

Particulars of the Births and Deaths\* recorded for the **Twelve Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Twelve Principal Towns, 13·0 and 12·4; City of Dublin, 12·0 and 11·7; Borough of Dun Laoghaire, 13·1 and 13·1; Cork, 18·6 and 14·1; Limerick, 15·9 and 13·6; and Waterford, 7·8 and 10·8.

The deaths from the principal epidemic diseases† recorded for the twelve principal towns last week were represented by an annual rate of 1·1 per 1,000.

**City of Dublin.**—The number of births registered during the week was 260—136 boys and 124 girls. Exclusive of those numbering 45, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 215, representing a rate of 26·1 per 1,000.

The number of deaths registered was 110—60 males and 50 females. Of the total, 14 related to persons belonging to other localities and the deaths of 3 persons belonging to the City were registered in an adjoining district,\* so that the actual number of deaths for the City was 99, representing a rate of 12·0 per 1,000.

There were 12 deaths from the principal epidemic diseases, comprising 2 from scarlet fever, one from whooping-cough, 4 from diphtheria and 5 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from diphtheria were 2, one and 2, and deaths from diarrhoea and enteritis of children under 2 years were 8, 6 and 2.

There were no deaths from scarlet fever or whooping-cough in the three preceding weeks.

Tuberculous disease caused 13 deaths (9 of which were from pulmonary tuberculosis, 2 from tuberculous meningitis, and 2 from military tuberculosis) as against 8, 8, and 19 from all forms of tuberculosis in the three preceding weeks.

Seven deaths were caused by cancer, and 13 by diseases of the heart.

There were 4 deaths from pneumonia, comprising one from lobar pneumonia and 3 from pneumonia (not otherwise defined). Bronchitis caused 6 deaths.

Four accidental deaths were registered, one of which was due to injuries caused by a motor vehicle, and one to injuries caused by a train. There was also one death by suicide.

Among the deaths of infants under one year of age 2 were due to tuberculosis, 2 to convulsions, 2 to bronchitis, 4 to diarrhoea and enteritis, one to congenital debility, and 3 to premature birth.

Twenty-five of the deaths recorded for the City during the week were those of children under 5 years of age, 18 being infants under one year, 8 of whom were under one month old, and 28 were those of persons aged 65 years and upwards, of whom 20 were aged 70 years or over.

Of the 99 deaths recorded, 50 occurred in hospitals or other public institutions.

**CASES OF INFECTIOUS DISEASES.**—Table III. shows the numbers notified in the City of Dublin, and in the Boroughs; and Table IV., the number of cases of certain diseases treated in Dublin Hospitals.

**Northern Ireland and Great Britain.**—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 12·4 per 1,000 of the population and for Londonderry 15·0.

In the 121 County Boroughs and Great Towns of England and Wales (including London, in which the rate was 9·9) the mortality was 10·0 per 1,000 of the estimated resident population.

The average death-rate for 16 principal towns of Scotland was 11·4 per 1,000 persons living, the rate for Glasgow being 11·9 and for Edinburgh 11·6.

\* See note at foot of fourth page.

† Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I. — BIRTHS and DEATHS registered (a) during the week ended Saturday, 19th October, 1935, for the Twelve Principal Towns of Saorstát Éireann and BELFAST and LONDONDERRY County Boroughs, with the METEOROLOGY for the week; also similar particulars for LONDON, EDINBURGH, and GLASGOW.

(a) See note at foot of fourth page. (b) According to the Census of 1926, but in the cases of the City of Dublin, and the Borough of Dún Laoghaire, the populations given are those estimated to the middle of 1935, while the estimate shown for London relates to the resident population in 1934. The populations for Glasgow and Edinburgh are those estimated provisionally to the middle of 1935. (c) Observations at Ordnance Survey Office, Phoenix Park. (d) Observations by Sir John Moore, taken at Fitzwilliam Square, (Sunshine returned by Trinity College, (e) Botanic Gardens, Glasnevin. (f) Marine.

TABLE III.—Cases of Infectious Diseases notified in the undermentioned Urban areas during the week ended Saturday, 19th October, 1935, and during each of the three preceding weeks. A dash (—) denotes that the disease in question is not notifiable in the district.

| AREAS               | Week ended | Typhoid Fever | Typhus, Pyrexia and Small-pox | Measles | Scarlet Fever | Whooping-cough | Diphtheria (including Membranous Croup) | Erysipelas | Eruptive Fever | Diarrhoeal Diseases | Dysentery & Malaria | Ophthalmia Neonatorum | Acute Primary Pneumonia and Acute Infectious Pneumonia | Cerebro-spinal Fever | Acute Poliomyelitis and Encephalitis Lethargica | Varicella | Tuberculosis | Total |

NOTE.—For the purpose of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births, by the exclusion of those taking place in each urban area belonging to other localities but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2, Cork Rural No. 1 and No. 2, and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths of residents of the Boroughs occurring in the Registrars' Districts above named are included, as in the case of births. In addition, the deaths in Institutions situated in Registrars' Districts embracing the twelve towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions for Saorstát Éireann will be made in the Detailed Annual Report.

**PRINCIPAL TOWNS**

Particulars of the Births and Deaths\* recorded for the Twelve Principal Towns are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Twelve Principal Towns, 12·5 and 12·8; City of Dublin, 13·0 and 12·3; Borough of Dun Laoghaire, 10·2 and 12·7; Cork, 12·0 and 13·3; Limerick, 7·9 and 12·9; and Waterford, 9·8 and 12·7.

The deaths from the principal epidemic diseases† recorded for the twelve principal towns last week were represented by an annual rate of 0·8 per 1,000. Among the 18 deaths for Cork were 2 from diarrhoea and enteritis of children under 2 years of age; and one of the 7 deaths for Drogheda was from diphtheria.

**City of Dublin.**—The number of births registered during the week was 215—108 boys and 107 girls. Exclusive of those numbering 28, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 187, representing a rate of 22·7 per 1,000.

The number of deaths registered was 125—64 males and 61 females. Of the total, 18 related to persons belonging to other localities, so that the actual number of deaths for the City was 107, representing a rate of 13·0 per 1,000.

There were 7 deaths from the principal epidemic diseases, comprising one from scarlet fever, one from diphtheria and 5 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from scarlet fever were 0, 0 and 2, from diphtheria one, 2 and 4, and from diarrhoea and enteritis of children under 2 years 6, 2 and 5.

Tuberculous disease caused 8 deaths (7 of which were from pulmonary tuberculosis, and one from tuberculous meningitis) as against 8, 19 and 13 from all forms of tuberculosis in the three preceding weeks.

Nine deaths were caused by cancer, and 18 by diseases of the heart.

There were 10 deaths from pneumonia, comprising 2 from lobar pneumonia, 5 from broncho-pneumonia and 3 from pneumonia (not otherwise defined). Bronchitis caused 9 deaths.

Two violent deaths were registered.

Among the deaths of infants under one year of age, one was due to bronchitis, 2 to pneumonia, 5 to diarrhoea and enteritis, one to congenital malformation, and 6 to premature birth.

Twenty-one of the deaths recorded for the City during the week were those of children under 5 years of age, 18 being infants under one year, 8 of whom were under one month old, and 40 were those of persons aged 65 years and upwards, of whom 33 were aged 70 years or over.

Of the 107 deaths recorded, 61 occurred in hospitals or other public institutions.

**CASES OF INFECTIOUS DISEASES.**—Table III. shows the numbers notified in the City of Dublin, and in the Boroughs; and Table IV., the number of cases of certain diseases treated in Dublin Hospitals.

**Northern Ireland and Great Britain.**—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 11·1 per 1,000 of the population and for Londonderry 15·0.

In the 121 County Boroughs and Great Towns of England and Wales (including London, in which the rate was 10·0) the mortality was 10·2 per 1,000 of the estimated resident population.

The average death-rate for 16 principal towns of Scotland was 11·5 per 1,000 persons living, the rate for Glasgow being 11·5 and for Edinburgh 11·6.

\* See note at foot of fourth page.

† Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 26th October, 1935, for the Twelve Principal Towns of Saorstát Éireann and BELFAST and LONDONDERRY County Boroughs, with the METEOROLOGY for the week; also similar particulars for LONDON, EDINBURGH, and GLASGOW.

(a) See note at foot of fourth page. (b) According to the Census of 1926, but in the cases of the City of Dublin, and the Borough of Dún Laoghaire, the populations given are those estimated to the middle of 1935, while the estimate shown for London relates to the resident population in 1934. The populations for Glasgow and Edinburgh are those estimated provisionally to the middle of 1935. (c) Observations at Ordnance Survey Office, Phoenix Park. (d) Observations by Sir John Moore, taken at Fitzwilliam Square, (Sunshire returned by Trinity College). (e) Botanic Gardens, Glasnevin. (f) Markree. (g) Typhoid Fever.

TABLE II.—Deaths registered during the week ended Saturday, 26th October, 1935, for the City of Dublin and the County Borough of Cork\* by Registrars' Districts, with the mortality per 1,000 of the population from all causes and from the PRINCIPAL EPIDEMIC DISEASES.

NOTE.—For the purpose of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births, by the exclusion of those taking place in each urban area belonging to other localities but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2, Cork Rural No. 1 and No. 2, and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths of residents of the Boroughs occurring in the Registrars' Districts above named are included, as in the case of births. In addition, the deaths in Institutions situated in Registrars' Districts embracing the twelve towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions for Saorstát Éireann will be made in the Detailed Annual Report.

*Baile Átha Cliath.*

PRINCIPAL TOWNS

Particulars of the Births and Deaths\* recorded for the Twelve Principal Towns are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Twelve Principal Towns, 11·9 and 12·6; City of Dublin, 11·2 and 12·3; Borough of Dun Laoghaire, 11·6 and 10·9; Cork, 11·3 and 13·8; Limerick, 4·0 and 9·6; and Waterford, 23·5 and 14·7.

The deaths from the principal epidemic diseases† recorded for the twelve principal towns last week were represented by an annual rate of 0·8 per 1,000. Among the 17 deaths for Cork were one from measles and one from diarrhoea and enteritis of a child under 2 years of age; and 2 of the 12 deaths for Waterford were from diarrhoea and enteritis of children under 2 years.

**City of Dublin.**—The number of births registered during the week was 198—97 boys and 101 girls. Exclusive of those numbering 19, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 179, representing a rate of 21·8 per 1,000.

The number of deaths registered was 109—61 males and 48 females. Of the total, 18 related to persons belonging to other localities, and the death of one person belonging to the City was registered in an adjoining district,\* so that the actual number of deaths for the City was 92, representing a rate of 11·2 per 1,000.

There were 6 deaths from the principal epidemic diseases, comprising 2 from scarlet fever, 2 from diphtheria and 2 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from scarlet fever were 0, 2, and one, from diphtheria 2, 4, and one, and from diarrhoea and enteritis of children under 2 years 2, 5, and 5.

Tuberculous disease caused 6 deaths (5 of which were from pulmonary tuberculosis, and one from tuberculous peritonitis) as against 19, 13 and 8 from all forms of tuberculosis in the three preceding weeks.

Eleven deaths were caused by cancer, and 8 by diseases of the heart.

There were 10 deaths from pneumonia, comprising 8 from broncho-pneumonia and 2 from pneumonia (not otherwise defined). Bronchitis caused 3 deaths.

Three violent deaths were registered.

Among the deaths of infants under one year of age, one was due to convulsions, 5 to pneumonia, 2 to diarrhoea and enteritis, 2 to congenital malformations, one to congenital debility, and 4 to premature birth.

Twenty-eight of the deaths recorded for the City during the week were those of children under 5 years of age, 18 being infants under one year, 8 of whom were under one month old, and 25 were those of persons aged 65 years and upwards, of whom 20 were aged 70 years or over.

Of the 92 deaths recorded, 56 occurred in hospitals or other public institutions.

**CASES OF INFECTIOUS DISEASES.**—Table III. shows the numbers notified in the City of Dublin, and in the Boroughs; and Table IV., the number of cases of certain diseases treated in Dublin Hospitals.

**Northern Ireland and Great Britain.**—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 12·9 per 1,000 of the population and for Londonderry 11·5.

In the 121 County Boroughs and Great Towns of England and Wales (including London, in which the rate was 11·2) the mortality was 11·3 per 1,000 of the estimated resident population.

The average death-rate for 16 principal towns of Scotland was 11·6 per 1,000 persons living, the rate for Glasgow being 12·3 and for Edinburgh 11·2.

\* See note at foot of fourth page.

† Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 2nd November, 1935, for the Twelve Principal Towns of Saorstát Éireann and BELFAST and LONDONDERRY County Boroughs, with the METEOROLOGY for the week; also similar particulars for LONDON, EDINBURGH, and GLASGOW.

| PRINCIPAL TOWNS | POPULATION (b) | BIRTHS          |     | DEATHS                           |     | Annual Rate per 1,000 persons registered by |     | BIRTHS                           |     | (a) See note at foot of fourth page. (b) According to the Census of 1926, but in the cases of the City of Dublin, and the Borough of Dún Laoghaire, the populations given are those estimated to the middle of 1935, while the estimate shown for London relates to the resident population in 1934. The populations for Glasgow and Edinburgh are those estimated provisionally to the middle of 1935. (c) Observations at Ordnance Survey Office, Phoenix Park. (d) Observations by Sir John Moore, taken at Fitzwilliam Square, (Sheshire returned by Trinity College). (e) Botanic Gardens, Glasnevin. (f) Markree. (g) Typhoid Fever.

TABLE II.—Deaths registered during the week ended Saturday, 2nd November, 1935, for the City of Dublin and the County Borough of Cork\* by Registrars' Districts, with the mortality per 1,000 of the population from all causes and from the PRINCIPAL EPIDEMIC DISEASES.

NOTE.—For the purpose of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births, by the exclusion of those taking place in each urban area belonging to other localities but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2, Cork Rural No. 1 and No. 2, and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths of residents of the Boroughs occurring in the Registrars' Districts above named are included, as in the case of births. In addition, the deaths in Institutions situated in Registrars' Districts embracing the twelve towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions for Saorstát Éireann will be made in the Detailed Annual Report.

## PRINCIPAL TOWNS

Particulars of the Births and Deaths\* recorded for the **Twelve Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population :—

Twelve Principal Towns, 15·0 and 13·1; City of Dublin, 15·3 and 12·9; Borough of Dun Laoghaire, 10·2 and 11·3; Cork, 13·3 and 13·8; Limerick, 22·5 and 12·6; and Waterford, 9·8 and 12·7.

The deaths from the principal epidemic diseases † recorded for the twelve principal towns last week were represented by an annual rate of 0·7 per 1,000. Among the 17 deaths for Limerick was one from typhoid fever; and one of the 6 deaths for Drogheda was from diphtheria.

**City of Dublin.**—The number of births registered during the week was 263—148 boys and 115 girls. Exclusive of those numbering 36, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 227, representing a rate of 27·6 per 1,000.

The number of deaths registered was 138—59 males and 79 females. Of the total, 15 related to persons belonging to other localities, and the deaths of 3 persons belonging to the City were registered in adjoining districts, so that the actual number of deaths for the City was 126, representing a rate of 15·3 per 1,000.

There were 7 deaths from the principal epidemic diseases, comprising 2 from diphtheria and 5 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from diphtheria were 4, one and 2, and from diarrhoea and enteritis of children under 2 years 5, 5, and 2.

Tuberculous disease caused 17 deaths (13 of which were from pulmonary tuberculosis, one from tuberculous meningitis and 3 from other forms of tuberculous disease) as against 13, 8 and 6 from all forms of tuberculosis in the three preceding weeks.

Nine deaths were caused by cancer, and 24 by diseases of the heart.

There were 10 deaths from pneumonia, comprising 5 from broncho-pneumonia, 4 from lobar pneumonia, and one from pneumonia (not otherwise defined). Bronchitis caused 8 deaths.

One accidental death was registered, due to injuries caused by a motor vehicle. There was also one death by suicide.

Among the deaths of infants under one year of age, one was due to tuberculosis, one to meningitis, 3 to pneumonia, 4 to diarrhoea and enteritis, 2 to congenital malformations, one to congenital debility, 3 to premature birth, and one to injury at birth.

Twenty-three of the deaths recorded for the City during the week were those of children under 5 years of age, 16 being infants under one year, 6 of whom were under one month old, and 39 were those of persons aged 65 years and upwards, of whom 29 were aged 70 years or over.

Of the 126 deaths recorded, 61 occurred in hospitals or other public institutions.

**CASES OF INFECTIOUS DISEASES.**—Table III. shows the numbers notified in the City of Dublin, and in the Boroughs; and Table IV., the number of cases of certain diseases treated in Dublin Hospitals.

**Northern Ireland and Great Britain.**—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 10·7 per 1,000 of the population and for Londonderry 24·2.

In the 121 County Boroughs and Great Towns of England and Wales (including London, in which the rate was 10·5) the mortality was 10·9 per 1,000 of the estimated resident population.

The average death-rate for 16 principal towns of Scotland was 13·0 per 1,000 persons living, the rate for Glasgow being 11·8 and for Edinburgh 13·8.

\* See note at foot of fourth page.

† Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 9th November, 1935, for the Twelve Principal Towns of Sacerdotal Éireann and BELFAST and LONDONDERRY County Boroughs, with the METEOROLOGY for the week; also similar particulars for LONDON, EDINBURGH, and GLASGOW.

(a) See note at foot of fourth page. (b) According to the Census of 1926, but in the cases of the City of Dublin, and the Borough of Dun Laoghaire, the populations given are those estimated to the middle of 1935, while the estimate shown for London relates to the resident population in 1934. The populations for Glasgow and Edinburgh are those estimated provisionally to the middle of 1935. (c) Observations at Ordnance Survey Office, Phoenix Park. (d) Observations by Sir John Moore, taken at Fitzwilliam Square, (e) Botanic Gardens, Glasnevin. (f) Mackree. (g) Typhoid Fever.

TABLE II.—Deaths registered during the week ended Saturday, 9th November, 1935, for the City of Dublin and the County Borough of Cork\* by Registrars' Districts, with the mortality per 1,000 of the population from all causes and from the PRINCIPAL EPIDEMIC DISEASES.

NOTE.—For the purpose of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births, by the exclusion of those taking place in each urban area belonging to other localities but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2, Cork Rural No. 1 and No. 2, and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths of residents of the Boroughs occurring in the Registrars' Districts above named are included, as in the case of births. In addition, the deaths in Institutions situated in Registrars' Districts embracing the twelve towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions for Saorstát Éireann will be made in the Detailed Annual Report.

*Baile Átha Cliath.*

### PRINCIPAL TOWNS

Particulars of the Births and Deaths\* recorded for the Twelve Principal Towns are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Twelve Principal Towns, 14·5 and 13·5; City of Dublin, 13·7 and 13·3; Borough of Dun Laoghaire, 14·5 and 11·6; Cork, 18·6 and 13·8; Limerick, 13·2 and 11·9; and Waterford, 9·8 and 13·2.

The deaths from the principal epidemic diseases † recorded for the twelve principal towns last week were represented by an annual rate of 0·8 per 1,000. Among the 3 deaths for Drogheda was one from diphtheria; and one of the 4 deaths for Tralee was from measles.

**City of Dublin.**—The number of births registered during the week was 217—125 boys and 92 girls. Exclusive of those numbering 30, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 187, representing a rate of 22·7 per 1,000.

The number of deaths registered was 127—58 males and 69 females. Of the total, 15 related to persons belonging to other localities, and the death of one person belonging to the City was registered in an adjoining district\* so that the actual number of deaths for the City was 113, representing a rate of 13·7 per 1,000.

There were 7 deaths from the principal epidemic diseases, comprising one from scarlet fever, 4 from diphtheria and 2 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from scarlet fever were one, 2 and 0, from diphtheria one, 2 and 2, and from diarrhoea and enteritis of children under 2 years 5, 2 and 5.

Tuberculous disease caused 11 deaths (10 of which were from pulmonary tuberculosis, and one from tuberculous meningitis,) as against 8, 6 and 17 from all forms of tuberculosis in the three preceding weeks.

Nine deaths were caused by cancer, and 20 by diseases of the heart.

There were 17 deaths from pneumonia, comprising 10 from broncho-pneumonia, 4 from lobar pneumonia, and 3 from pneumonia (not otherwise defined). Bronchitis caused 5 deaths.

One violent death was registered during the week.

Among the deaths of infants under one year of age, one was due to scarlet fever, 5 to pneumonia, 2 to diarrhoea and enteritis, one to congenital malformation, and 2 to congenital debility.

Twenty-two of the deaths recorded for the City during the week were those of children under 5 years of age, 13 being infants under one year, 2 of whom were under one month old, and 37 were those of persons aged 65 years and upwards, of whom 25 were aged 70 years or over.

Of the 113 deaths recorded, 47 occurred in hospitals or other public institutions.  
**CASES OF INFECTIOUS DISEASES.**—Table III. shows the numbers notified in the City of Dublin, and in the Boroughs; and Table IV., the number of cases of certain diseases treated in Dublin Hospitals.

**Northern Ireland and Great Britain.**—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 15·3 per 1,000 of the population and for Londonderry 15·0.

In the 121 County Boroughs and Great Towns of England and Wales (including London, in which the rate was 10·3) the mortality was 10·9 per 1,000 of the estimated resident population.

The average death-rate for 16 principal towns of Scotland was 12·9 per 1,000 persons living, the rate for Glasgow being 13·3 and for Edinburgh 11·9.

\* See note at foot of fourth page.

† Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 16th November, 1935, for the Twelve Principal Towns of Saorstát Éireann and Belfast and LONDONDERRY County Boroughs, with the METEOROLOGY for the week; also similar particulars for LONDON, EDINBURGH, and GLASGOW.

| PRINCIPAL TOWNS | POPULATION (b) | Annual Rate per 1,000 persons represented by |                                    | BIRTHS       |                     | TOTAL DEATHS                |   | Under 1 (a) See note at foot of fourth page. (b) According to the Census of 1926, but in the cases of the City of Dublin, and the Borough of Dún Laoghaire, the populations given are those estimated to the middle of 1935, while the estimate shown for London relates to the resident population in 1934. The populations for Glasgow and Edinburgh are those estimated provisionally to the middle of 1935. (c) Observations at Ordnance Survey Office, Phoenix Park. (d) Observations by Sir John Moore, taken at Fitzwilliam Square, Sunabine returned by Trinity College. (e) Botanic Gardens, Glasnevin. (f) Martree. (g) Typhoid Fever.

TABLE II.—Deaths registered during the week ended **Saturday, 16th November, 1935**, for the City of Dublin and the County Borough of Cork\* by Registrars' Districts, with the mortality per 1,000 of the population from all causes and from the PRINCIPAL EPIDEMIC DISEASES.

NOTE.—For the purpose of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births, by the exclusion of those taking place in each urban area belonging to other localities but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2, Cork Rural No. 1 and No. 2, and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths of residents of the Boroughs occurring in the Registrars' Districts above named are included, as in the case of births. In addition, the deaths in Institutions situated in Registrars' Districts embracing the twelve towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions for Saorstát Éireann will be made in the Detailed Annual Report.

*Baile Átha Cliath.*

## PRINCIPAL TOWNS

Particulars of the Births and Deaths\* recorded for the Twelve Principal Towns are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Twelve Principal Towns, 16·7 and 14·5; City of Dublin, 17·3 and 14·4; Borough of Dun Laoghaire, 27·6 and 16·0; Cork, 15·9 and 14·8; Limerick, 7·9 and 11·9; and Waterford, 19·6 and 15·7.

The deaths from the principal epidemic diseases † recorded for the twelve principal towns last week were represented by an annual rate of 0·9 per 1,000. Among the 24 deaths from all causes for Cork were 2 from diarrhoea and enteritis of children under 2 years of age; one of the 8 deaths for Dundalk was from measles, and one of the 3 deaths for Kilkenny was also from this disease.

**City of Dublin.**—The number of births registered during the week was 250—129 boys and 121 girls. Exclusive of those numbering 45, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 205, representing a rate of 24·9 per 1,000.

The number of deaths registered was 164—81 males and 83 females. Of the total, 23 related to persons belonging to other localities, and the death of one person belonging to the City was registered in an adjoining district\* so that the actual number of deaths for the City was 142, representing a rate of 17·3 per 1,000.

There were 6 deaths from the principal epidemic diseases, comprising one from measles, one from scarlet fever, 2 from diphtheria and 2 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from scarlet fever were 2, 0 and one, from diphtheria 2, 2 and 4, and from diarrhoea and of children under 2 years 2, 5 and 2. There were no deaths from measles during the three preceding weeks.

Tuberculous disease caused 12 deaths (9 of which were from pulmonary tuberculosis, one from tuberculous meningitis, and 2 from other forms of tuberculous disease) as against 6, 17 and 11 from all forms of tuberculosis in the three preceding weeks.

Eleven deaths were caused by cancer, and 19 by diseases of the heart.

There were 25 deaths from pneumonia, comprising 12 from broncho-pneumonia, 5 from lobar pneumonia, and 8 from pneumonia (not otherwise defined). Bronchitis caused 12 deaths.

Three accidental deaths were registered during the week, one of which was due to burns, and one to injuries caused by a tramcar. There was also one death by suicide.

Among the deaths of infants under one year of age, one was due to tuberculosis, one to convulsions, 5 to pneumonia, 2 to diarrhoea and enteritis, 2 to congenital malformations, one to congenital debility, 2 to premature birth, and one to injury at birth.

Thirty of the deaths recorded for the City during the week were those of children under 5 years of age, 19 being infants under one year, 8 of whom were under one month old, and 37 were those of persons aged 65 years and upwards, of whom 26 were aged 70 years or over.

Of the 142 deaths recorded, 70 occurred in hospitals or other public institutions. **CASES OF INFECTIOUS DISEASES.**—Table III. shows the numbers notified in the City of Dublin, and in the Boroughs; and Table IV., the number of cases of certain diseases treated in Dublin Hospitals.

**Northern Ireland and Great Britain.**—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 13·9 per 1,000 of the population and for Londonderry 15·0.

In the 121 County Boroughs and Great Towns of England and Wales (including London, in which the rate was 10·9) the mortality was 11·4 per 1,000 of the estimated resident population.

The average death-rate for 16 principal towns of Scotland was 13·4 per 1,000 persons living, the rate for Glasgow being 13·8 and for Edinburgh 14·5.

\* See note at foot of fourth page.

† Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I. — BIRTHS and DEATHS registered (a) during the week ended Saturday, 23rd November, 1935, for the Twelve Principal Towns of Saorstát Éireann and BELFAST and LONDONDERRY County Boroughs, with the METEOROLOGY for the week; also similar particulars for LONDON, EDINBURGH, and GLASGOW.

| PRINCIPAL TOWNS | POPULATION (b) | Annual Rate per 1,000 persons registered by presented by |     | BIRTHS                             |     | DEATHS       |     |                             |     |      |      |      |      |      |      |      |      |      |      |      |      |      | METEOROLOGY |      |                 |      |                               |      | (a) See note at foot of fourth page. (b) According to the Census of 1926, but in the cases of the City of Dublin, and the Borough of Dún Laoghaire, the populations given are those estimated to the middle of 1935, while the estimate shown for London relates to the resident population in 1934. The populations for Glasgow and Edinburgh are those estimated provisionally to the middle of 1935. (c) Observations at Ordnance Survey Office, Phoenix Park. (d) Observations by Sir John Moore, taken at Fitzwilliam Square, (e) Botanic Gardens, Glasnevin. (f) Mactree.

TABLE II.—Deaths registered during the week ended Saturday, 23rd November, 1935, for the City of Dublin and the County Borough of Cork\* by Registrars' Districts, with the mortality per 1,000 of the population from all causes and from the PRINCIPAL EPIDEMIC DISEASES.

NOTE.—For the purpose of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births, by the exclusion of those taking place in each urban area belonging to other localities but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2, Ark Rural No. 1 and No. 2, and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths of residents of the Boroughs occurring in the Registrars' Districts above named are included, as in the case of births. In addition, the deaths in Institutions situated in Registrars' Districts embracing the twelve towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions for Saorstát Éireann will be made in the Detailed Annual Report.

### PRINCIPAL TOWNS

Particulars of the Births and Deaths\* recorded for the **Twelve Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Twelve Principal Towns, 15·2 and 15·4; City of Dublin, 13·6 and 15·0; Borough of Dun Laoghaire, 14·5 and 16·7; Cork, 12·6 and 15·1; Limerick, 19·8 and 15·9; and Waterford, 23·5 and 15·7.

The deaths from the principal epidemic diseases ‡ recorded for the twelve principal towns last week were represented by an annual rate of 1·1 per 1,000. Among the 15 deaths from all causes for Limerick were one from typhoid fever, and one from diarrhoea and enteritis of a child under 2 years of age.

**City of Dublin.**—The number of births registered during the week was 240—125 boys and 115 girls. Exclusive of those numbering 36, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 204, representing a rate of 24·8 per 1,000.

The number of deaths registered was 135—71 males and 64 females. Of the total, 28 related to persons belonging to other localities, and the deaths of 5 persons belonging to the City were registered in adjoining districts\* so that the actual number of deaths for the City was 112, representing a rate of 13·6 per 1,000.

There were 8 deaths from the principal epidemic diseases, comprising 3 from measles, 2 from diphtheria and 3 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from measles were 0, 0 and one, from diphtheria 2, 4 and 2, and from diarrhoea and enteritis of children under 2 years 5, 2 and 2.

Tuberculous disease caused 8 deaths (4 of which were from pulmonary tuberculosis, 2 from tuberculous meningitis, and 2 from other forms of tuberculous disease) as against 17, 11 and 12 from all forms of tuberculosis in the three preceding weeks.

Sixteen deaths were caused by cancer, and 15 by diseases of the heart.

There were 11 deaths from pneumonia, comprising 4 from broncho-pneumonia, 2 from lobar pneumonia, and 5 from pneumonia (not otherwise defined). Bronchitis caused 10 deaths.

There was one death due to scalds registered during the week.

Among the deaths of infants under one year of age, one was due to cerebro-spinal fever, one to tuberculosis, one to convulsions, 2 to pneumonia, 3 to diarrhoea and enteritis, 2 to congenital malformations, 2 to congenital debility, 3 to premature birth, and one to injury at birth.

Twenty-six of the deaths recorded for the City during the week were those of children under 5 years of age, 19 being infants under one year, 5 of whom were under one month old, and 37 were those of persons aged 65 years and upwards, of whom 31 were aged 70 years or over.

Of the 112 deaths recorded, 53 occurred in hospitals or other public institutions.

**CASES OF INFECTIOUS DISEASES.**—Table III. shows the numbers notified in the City of Dublin, and in the Boroughs; and Table IV., the number of cases of certain diseases treated in Dublin Hospitals.

**Northern Ireland and Great Britain.**—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 13·1 per 1,000 of the population and for Londonderry 13·9.

In the 121 County Boroughs and Great Towns of England and Wales (including London, in which the rate was 10·7) the mortality was 11·5 per 1,000 of the estimated resident population.

The average death-rate for 16 principal towns of Scotland was 13·6 per 1,000 persons living, the rate for Glasgow being 13·9 and for Edinburgh 14·2.

\* See note at foot of fourth page.

† Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 30th November, 1935, for the Twelve Principal Towns of Saorstát Éireann and Belfast and LONDONDERRY County Boroughs, with the METEOROLOGY for the week; also similar particulars for LONDON, EDINBURGH, and GLASGOW.

| PRINCIPAL TOWNS | POPULATION (b) | BIRTHS                                      |  | DEATHS                             |  | CAUSED BY           |  |                      |  |                             |  |  |  |  |  |  |  | METEOROLOGY  |  |  |  |        |  |                             |  |          |  |               |  |                        |  |                    |  |                 |  |                    |  |                          |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

(a) See note at foot of fourth page. (b) According to the Census of 1926, but in the cases of the City of Dublin, and the Borough of Dún Laoghaire, the populations given are those estimated to the middle of 1935, while the estimate shown for London relates to the resident population in 1934. The populations for Glasgow and Edinburgh are those estimated provisionally to the middle of 1936. (c) Observations at Ordnance Survey Office, Phoenix Park. (d) Observations by Sir John Moore, taken at Fitzwilliam Square, (Sunshine returned by Trinity College). (e) Botanic Gardens, Glasnevin. (f) Markree. (g) Typhoid Fever.

TABLE II.—Deaths registered during the week ended Saturday, 30th November, 1935, for the City of Dublin and the County Borough of Cork\* by Districts, with the mortality per 1,000 of the population from all causes and from the PRINCIPAL EPIDEMIC DISEASES.

[illegible]

(\*) See note at foot of fourth page. (†) The populations given for the Co. Borough of Cork and its component parts are those according to the Census of 1926.

TABLE III.—Cases of Infectious Diseases notified in the undermentioned Urban areas during the week ended Saturday, 30th November, 1935, and during each of the three preceding weeks. A dash (—) denotes that the disease in question is not notifiable in the district.

NOTE.—For the purpose of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births, by the exclusion of those taking place in each urban area belonging to other localities but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2, Cork Rural No. 1 and No. 2, and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths of residents of the Boroughs occurring in the Registrars' Districts above named are included, as in the case of births. In addition, the deaths in Institutions situated in Registrars' Districts embracing the twelve towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions for Saorstát Éireann will be made in the Detailed Annual Report.

### PRINCIPAL TOWNS

Particulars of the Births and Deaths\* recorded for the **Twelve Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Twelve Principal Towns, 16·6 and 15·8; City of Dublin, 17·0 and 15·4; Borough of Dun Laoghaire, 14·5 and 17·8; Cork, 19·9 and 16·8; Limerick, 19·8 and 15·2; and Waterford, 9·8 and 15·7.

The deaths from the principal epidemic diseases† recorded for the twelve principal towns last week were represented by an annual rate of 0·9 per 1,000. Among the 4 deaths from all causes for Sligo was one from diphtheria and one of the 3 deaths for Kilkenny was from measles.

**City of Dublin.**—The number of births registered during the week was 254—120 boys and 134 girls. Exclusive of those numbering 37, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 217, representing a rate of 26·4 per 1,000.

The number of deaths registered was 162—69 males and 93 females. Of the total, 23 related to persons belonging to other localities, and the death of one person belonging to the City was registered in an adjoining district\* so that the actual number of deaths for the City was 140, representing a rate of 17·0 per 1,000.

There were 10 deaths from the principal epidemic diseases, comprising one from measles, 2 from scarlet fever, 5 from diphtheria and 2 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from measles were 0, one and 3; from scarlet fever, one, one and 0; from diphtheria, 4, 2 and 2, and from diarrhoea and enteritis of children under 2 years 2, 2 and 3.

Tuberculous disease caused 25 deaths (22 of which were from pulmonary tuberculosis, one from tuberculous meningitis, and 2 from other forms of tuberculous disease) as against 11, 12 and 8 from all forms of tuberculosis in the three preceding weeks.

Thirteen deaths were caused by cancer, and 18 by diseases of the heart.

There were 8 deaths from pneumonia, comprising 7 from broncho-pneumonia, and one from pneumonia (not otherwise defined). Bronchitis caused 11 deaths.

There was one death due to accidental electrocution registered during the week.

Among the deaths of infants under one year of age, one was due to bronchitis, 2 to pneumonia, 2 to diarrhoea and enteritis, one to congenital malformation, one to congenital debility, and 3 to premature birth.

Eighteen of the deaths recorded for the City during the week were those of children under 5 years of age, 12 being infants under one year, 4 of whom were under one month old, and 48 were those of persons aged 65 years and upwards, of whom 33 were aged 70 years or over.

Of the 140 deaths recorded, 63 occurred in hospitals or other public institutions.

**CASES OF INFECTIOUS DISEASES.**—Table III. shows the numbers notified in the City of Dublin, and in the Boroughs; and Table IV., the number of cases of certain diseases treated in Dublin Hospitals.

**Northern Ireland and Great Britain.**—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 16·3 per 1,000 of the population and for Londonderry 27·7.

In the 121 County Boroughs and Great Towns of England and Wales (including London, in which the rate was 11·0) the mortality was 11·8 per 1,000 of the estimated resident population.

The average death-rate for 16 principal towns of Scotland was 15·1 per 1,000 persons living, the rate for Glasgow being 16·1 and for Edinburgh 15·1.

\* See note at foot of fourth page.

† Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 7th December, 1935, for the Twelve Principal Towns of Saorstát Éireann and BELFAST and LONDONDERRY County Boroughs, with the METEOROLOGY for the week; also similar particulars for LONDON, EDINBURGH, and GLASGOW.

(a) See note at foot of fourth page. (b) According to the Census of 1926, but in the cases of the City of Dublin, and the Borough of Dún Laoghaire, the populations given are those estimated to the middle of 1935, while the estimate shown for London relates to the resident population in 1934. The populations for Glasgow and Edinburgh are those estimated provisionally to the middle of 1935. (c) Observations at O'Connell Survey Office, Phoenix Park. (d) Observations by Sir John Moore, taken at Fitzwilliam Square, (e) Botanic Gardens, Glancovin. (f) Marilee. (g) Typhoid Fever.

TABLE II.—Deaths registered during the week ended Saturday, 7th December, 1935, for the City of Dublin and the County Borough of Cork\* by Registrars' Districts, with the mortality per 1,000 of the population from all causes and from the PRINCIPAL EPIDEMIC DISEASES.

NOTE.—For the purpose of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births by the exclusion of those taking place in each urban area belonging to other localities but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2 Cork Rural No. 1 and No. 2, and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths of residents of the Boroughs occurring in the Registrars' Districts above named are included, as in the case of births. In addition, the deaths in Institutions situated in Registrars' Districts embracing the twelve towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions for Saorstát Éireann will be made in the Detailed Annual Report.

## PRINCIPAL TOWNS

Particulars of the Births and Deaths\* recorded for the **Twelve Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Twelve Principal Towns, 16·2 and 16·2; City of Dublin, 16·7 and 16·2; Borough of Dun Laoghaire, 23·2 and 20·0; Cork, 16·6 and 16·3; Limerick, 15·9 and 15·9; and Waterford, 13·7 and 16·7.

The deaths from the principal epidemic diseases† recorded for the twelve principal towns last week were represented by an annual rate of 0·9 per 1,000. Among the 5 deaths from all causes for Galway were 2 from diarrhoea and enteritis of children under 2 years of age.

**City of Dublin.**—The number of births registered during the week was 214—112 boys and 102 girls. Exclusive of those numbering 30, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 184, representing a rate of 22·4 per 1,000.

The number of deaths registered was 160—88 males and 72 females. Of the total, 23 related to persons belonging to other localities, so that the actual number of deaths for the City was 137, representing a rate of 16·7 per 1,000.

There were 8 deaths from the principal epidemic diseases, comprising one from scarlet fever, 2 from diphtheria and 5 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from scarlet fever were one, 0, and 2; from diphtheria 2, 2 and 5, and from diarrhoea and enteritis of children under 2 years 2, 3, and 2.

One death from cerebro-spinal fever was registered.

Tuberculous disease caused 14 deaths (12 of which were from pulmonary tuberculosis, and 2 from tuberculous meningitis), as against 12, 8 and 25 from all forms of tuberculosis in the three preceding weeks.

Ten deaths were caused by cancer, and 31 by diseases of the heart.

There were 16 deaths from pneumonia, comprising 12 from broncho-pneumonia, one from lobar pneumonia, and 3 from pneumonia (not otherwise defined). Bronchitis caused 7 deaths.

There were 3 accidental deaths registered, one of which (that of a child aged 2 years and 2 months) was due to burns, and one to injuries caused by a motor vehicle. There was also one death by suicide.

Among the deaths of infants under one year of age, one was due to cerebro-spinal fever, 2 to convulsions, 2 to pneumonia, 5 to diarrhoea and enteritis, 2 to congenital malformations, one to congenital debility, and one to premature birth.

Twenty-eight of the deaths recorded for the City during the week were those of children under 5 years of age, 17 being infants under one year, 4 of whom were under one month old, and 50 were those of persons aged 65 years and upwards, of whom 29 were aged 70 years or over.

Of the 137 deaths recorded, 76 occurred in hospitals or other public institutions.

**CASES OF INFECTIOUS DISEASES.**—Table III. shows the numbers notified in the City of Dublin, and in the Boroughs; and Table IV., the number of cases of certain diseases treated in Dublin Hospitals.

**Northern Ireland and Great Britain.**—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 15·6 per 1,000 of the population and for Londonderry 16·2.

In the 121 County Boroughs and Great Towns of England and Wales (including London, in which the rate was 12·8) the mortality was 12·9 per 1,000 of the estimated resident population.

The average death-rate for 16 principal towns of Scotland was 15·1 per 1,000 persons living, the rate for Glasgow being 17·1 and for Edinburgh 13·4.

\* See note at foot of fourth page.

† Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 14th December, 1935, for the Twelve Principal Towns of Saorstát Éireann and BELFAST and LONDONDERRY County Boroughs, with the METEOROLOGY for the week; also similar particulars for LONDON, EDINBURGH, and GLASGOW.

| PRINCIPAL TOWNS | COLS. | POPULATION (b) | Annual Rate per 1,000 Persons registered by |                                  | BIRTHS |     | DEATHS                                      |     |                     |     |                      |     |                             |      |                             |      |      |              |      |              | CAUSED BY                   |      |                             |      |               | DEATHS |                        |      |                        |      | METEOROLOGY        |      |                 |      |  |  |  |

NOTE.—For the purpose of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births by the exclusion of those taking place in each urban area belonging to other localities but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2 Cork Rural No. 1 and No. 2, and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths of residents of the Boroughs occurring in the Registrars' Districts above named are included, as in the case of births. In addition, the deaths in Institutions situated in Registrars' Districts embracing the twelve towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions for Saorstát Éireann will be made in the Detailed Annual Report.

*Baile Átha Cliath.*

## PRINCIPAL TOWNS

Particulars of the Births and Deaths\* recorded for the **Twelve Principal Towns** are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Twelve Principal Towns, 15.5 and 15.9; City of Dublin, 16.4 and 15.9; Borough of Dun Laoghaire, 21.8 and 18.5; Cork, 14.0 and 15.8; Limerick, 15.9 and 17.9; and Waterford, 5.9 and 13.2.

The deaths from the principal epidemic diseases† recorded for the twelve principal towns last week were represented by an annual rate of 0.8 per 1,000. Among the 12 deaths from all causes for Limerick were 2 from diarrhoea and enteritis of children under 2 years of age; and one of the 4 deaths for Kilkenny was from measles.

**City of Dublin.**—The number of births registered during the week was 218—108 boys and 110 girls. Exclusive of those numbering 36, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 182, representing a rate of 22.1 per 1,000.

The number of deaths registered was 153—85 males and 68 females. Of the total, 20 related to persons belonging to other localities, and the deaths of 2 persons belonging to the City were registered in adjoining districts\*, so that the actual number of deaths for the City was 135, representing a rate of 16.4 per 1,000.

There were 8 deaths from the principal epidemic diseases, comprising one from scarlet fever, 2 from diphtheria and 5 from diarrhoea and enteritis of children under 2 years of age. In the three preceding weeks deaths from scarlet fever were 0, 2 and one; from diphtheria 2, 5 and 2, and from diarrhoea and enteritis of children under 2 years 3, 2 and 5.

Tuberculous disease caused 11 deaths (6 of which were from pulmonary tuberculosis, 3 from tuberculous meningitis, and 2 from other forms of tuberculous disease), as against 8, 25 and 14 from all forms of tuberculosis in the three preceding weeks.

Eight deaths were caused by cancer, and 20 by diseases of the heart.

There were 21 deaths from pneumonia, comprising 13 from broncho-pneumonia, 4 from lobar pneumonia, and 4 from pneumonia (not otherwise defined). Bronchitis caused 17 deaths.

There were 4 violent deaths registered, one of which (that of a child aged 5 weeks) was due to burns, and one to injuries caused by a motor vehicle.

Among the deaths of infants under one year of age, one was due to tuberculosis, 3 to convulsions, 2 to pneumonia, 4 to diarrhoea and enteritis, one to congenital malformation, one to congenital debility, and 5 to premature birth.

Thirty-four of the deaths recorded for the City during the week were those of children under 5 years of age, 24 being infants under one year, 10 of whom were under one month old, and 47 were those of persons aged 65 years and upwards, of whom 35 were aged 70 years or over.

Of the 135 deaths recorded, 64 occurred in hospitals or other public institutions.

**CASES OF INFECTIOUS DISEASES.**—Table III. shows the numbers notified in the City of Dublin, and in the Boroughs; and Table IV., the number of cases of certain diseases treated in Dublin Hospitals.

**Northern Ireland and Great Britain.**—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 15.6 per 1,000 of the population and for Londonderry 10.4.

In the 121 County Boroughs and Great Towns of England and Wales (including London, in which the rate was 13.9) the mortality was 14.1 per 1,000 of the estimated resident population.

The average death-rate for 16 principal towns of Scotland was 15.8 per 1,000 persons living, the rate for Glasgow being 18.6 and for Edinburgh 13.2.

\*See note at foot of fourth page.

† Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE 11.—Deaths registered during the week ended Saturday, 21st December, 1935, for the City of Dublin and the County Borough of Cork\* by Registrars' Districts, with the mortality per 1,000 of the population from all causes and from the PRINCIPAL EPIDEMIC DISEASES.

NOTE.—For the purpose of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births by the exclusion of those taking place in each urban area belonging to other localities but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2 Cork Rural No. 1 and No. 2, and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths of residents of the Boroughs occurring in the Registrars' Districts above named are included, as in the case of births. In addition, the deaths in Institutions situated in Registrars' Districts embracing the twelve towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions for Saorstát Éireann will be made in the Detailed Annual Report.

## PRINCIPAL TOWNS

Particulars of the Births and Deaths\* recorded for the Twelve Principal Towns are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were represented by the following annual rates per 1,000 of the population:—

Twelve Principal Towns, 14·7 and 15·8; City of Dublin, 15·3 and 16·4; Borough of Dun Laoghaire, 16·0 and 18·9; Cork, 12·0 and 15·6; Limerick, 18·5 and 17·5; and Waterford, 13·7 and 10·8.

The deaths from the principal epidemic diseases† recorded for the twelve principal towns last week were represented by an annual rate of 0·8 per 1,000. Among the 14 deaths from all causes for Limerick were one from whooping-cough, and 2 from diarrhoea and enteritis of children under 2 years of age; and one of the 6 deaths for Dundalk was from scarlet fever.

**City of Dublin.**—The number of births registered during the week was 153—83 boys and 70 girls. Exclusive of those numbering 34, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 119, representing a rate of 14·5 per 1,000.

The number of deaths registered was 141—75 males and 66 females. Of the total, 15 related to persons belonging to other localities, so that the actual number of deaths for the City was 126, representing a rate of 15·3 per 1,000.

There were 6 deaths from the principal epidemic diseases, comprising 2 from measles and 4 from diphtheria. In the three preceding weeks deaths from measles were one, 0 and 0, and from diphtheria 5, 2 and 2.

Tuberculous disease caused 15 deaths (14 of which were from pulmonary tuberculosis, and one from tuberculous meningitis), as against 25, 14 and 11 from all forms of tuberculosis in the three preceding weeks.

Twelve deaths were caused by cancer, and 25 by diseases of the heart.

There were 16 deaths from pneumonia, comprising 12 from broncho-pneumonia, 3 from lobar pneumonia, and one from pneumonia (not otherwise defined). Bronchitis caused 11 deaths.

There was one accidental death due to burns registered.

Among the deaths of infants under one year of age, one was due to measles, 2 to meningitis, one to convulsions, 2 to pneumonia, 4 to congenital debility, and 2 to premature birth.

Twenty-three of the deaths recorded for the City during the week were those of children under 5 years of age, 13 being infants under one year, 5 of whom were under one month old, and 44 were those of persons aged 65 years and upwards, of whom 33 were aged 70 years or over.

Of the 126 deaths recorded, 65 occurred in hospitals or other public institutions.

**CASES OF INFECTIOUS DISEASES.**—Table III. shows the numbers notified in the City of Dublin, and in the Boroughs; and Table IV., the number of cases of certain diseases treated in Dublin Hospitals.

**Northern Ireland and Great Britain.**—The mortality from all causes for Belfast County Borough during the week was represented by an annual rate of 19·1 per 1,000 of the population and for Londonderry 8·1

In the 121 County Boroughs and Great Towns of England and Wales (including London, in which the rate was 17·3) the mortality was 16·6 per 1,000 of the estimated resident population.

The average death-rate for 16 principal towns of Scotland was 18·9 per 1,000 persons living, the rate for Glasgow being 23·1 and for Edinburgh 14·8.

\*See note at foot of fourth page.

†Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE II.—Deaths registered during the week ended Saturday, 28th December, 1935, for the City of Dublin and the County Borough of Cork\* by Registrars' Districts, with the mortality per 1,000 of the population from all causes and from the PRINCIPAL EPIDEMIC DISEASES.

NOTE.—For the purpose of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births by the exclusion of those taking place in each urban area belonging to other localities but the figures shown for Dun Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2 Cork Rural No. 1 and No. 2, and Limerick Rural, respectively, relating to residents of those Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths of residents of the Boroughs occurring in the Registrars' Districts above named are included, as in the case of births. In addition, the deaths in Institutions situated in Registrars' Districts embracing the twelve towns are assigned to the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions for Saorstát Éireann will be made in the Detailed Annual Report.
